BREMBRE, Sir NICHOLAS (*d.* 1388), lord mayor of London, was the chief supporter among the citizens of Richard II. The 'worthie and puissant man of the city' of Grafton (who wrongly terms him a draper), and 'the stout mayor' of Pennant, he was a son of Sir John Brembre (Hasted, ii. 258), and, becoming a citizen and grocer of London, purchased in 1372–3 (46 Ed. III) from the Malmains family the estates of Mereworth, Maplescomb, and West Peckham, in Kent, (*ibid.* i. 290, ii. 258, 264). He first appears as an alderman in 1372 (*Letter-book G*, f. 293*b*), sitting for Bread Street Ward, in which he resided (Herbert, i. 328). The citizens were at this time divided into two factions, the party under John of Northampton supporting John of Gaunt and Wycliffe, while that headed by Walworth and Philipot supported the opposition and Courtenay. On the fall of John of Gaunt and his partisans at the close of Edward III's reign (1377), Staple, the then lord mayor, was deposed and replaced by Brembre, who belonged to the opposite party. He took his oath at the Tower 29 March 1377 (Stow, *Annals*), and was also re-elected for the succeeding year (1377–8). His 'Proclamacio . . . . ex parte . . . . Regis Ricardi' in this mayoralty (as shown by the sheriffs' names) is given in the 'Cottonian MSS.' (*Nero*, D. vi. fos. 177*b*–9). In the parliament of Gloucester (1378) Thomas of Woodstock, the king's uncle, demanded his impeachment as mayor for an outrage by a citizen on one of his followers, but the matter was compromised (Riley). He now became for several years (at least from 1379 to 1386) one of the two collectors of customs for the port of London, with Geoffrey Chaucer for his comptroller, his accounts being still preserved (Q. R. *Customs Bundle*, 247). The party to which Brembre belonged had its strength among the greater companies, especially the grocers, then dominant, and the fishmongers, whose monopoly it upheld against the clamours of the populace (*ibid.*) It was oligarchical in its aims, striving to deprive the lesser companies of any voice in the city (Norton), and was consequently favourable to Richard's policy. At the crisis of the rising of the commons (15 Jan. 1381) Brembre, with his allies Walworth and Philipot, accompanied the king to Smithfield, and was knighted with them for his services on that occasion (*Letter-book H*, f. cxxxii; Froissart, cap. 108). He is mentioned as the king's financial agent on 21 Dec. 1381 (*Issues of Exchequer*), and as one of the leading merchants summoned 'a treter and communer' with parliament on supplies, 10 May 1382 (*Rot. Parl.* iii. 123). His foremost opponent, John of Northampton (T. Wals. ii. 111), held the mayoralty for two years (1381–3) in succession to Walworth, but at the election of 1383 Brembre, who had been returned to parliament for the

city at the beginning of this year (*Return*, i. 215), and who was one of the sixteen aldermen then belonging to the great Grocers' Company (HERBERT, i. 207), 'ove forte main . . . et gñt multitude des gentz . . . feust fait maire' (*Rot. Parl.* iii. 226). Dr. Stubbs calls attention to this forcible election as possessing 'the importance of a constitutional episode' (*Const. Hist.* iii. 575), but wrongly assigns it to 1386 (*ibid.*) On the outbreak of John of Northampton's riot in February 1384, Brembre arrested and beheaded a ringleader, John Constantyn, cordwainer (T. WALS. ii. 110–1). Our main knowledge of Brembre's conduct is derived from a bundle of petitions presented to parliament in October–November 1386 by ten companies of the rival faction, of which two (those of the mercers and cordwainers) are printed in 'Rot. Parl.' iii. 225–7. In these he is accused of tyrannous conduct during his mayoralty of 1383–4, especially of beheading the cordwainer for the riot in Cheapside, and of securing his re-election in 1384 by increased violence. Forbidding his opponents to take part in the election, he filled the Guildhall with armed men, who, at their approach, 'sailleront sur eux ove gñt noise, criantz tuwez, tuwez, lour pursuivantz hydousement.' In 1386 he secured the election of his accomplice, Nicholas Exton, who was thus mayor at the time of the petition, so that the mayoralty was still, it urged, 'tenuz par conquest et maistrie.' While mayor (1384), Brembre had effected the ruin of his rival, John of Northampton (who had appealed in vain to John of Gaunt), by his favourite device of a charge of treason (T. WALS. ii. 116); and though Gloucester ('Thomas of Woodstock') and the opposition accused him of plotting (T. WALS. ii. 150) in favour of Suffolk (the chancellor), who was impeached in the parliament of 1386, and of compassing their death, he not only escaped for the time, but at the close of the year (1386) was, with Burley and others of the party of resistance, summoned by Richard into his council. Through the year 1387 he supported Richard in London in his struggle for absolute power, but was again accused by Gloucester and the opposition of inciting the mayor and citizens against them, when the former (Exton) shrank from such a plot (T. WALS. ii. 165; *Rot. Parl.* iii. 234). He was therefore among the five councillors charged with treason by the lords appellant on 14 Nov. 1387, and, on the citizens refusing to rise for him, fled, but was captured (in Wales, says FROISSART) and imprisoned at Gloucester (writ of 4 Jan. 1388 in RYMER'S *Fœdera*), whence on 28 Jan. 1388 he was removed to the Tower (*Issue Rolls*, 11 *Rich. II*). The 'merciless' parliament met on 3 Feb., and the five councillors were formally impeached by Gloucester and the lords appellant (*Rot. Parl.* iii. 229–36). Brembre, who was styled 'faulx Chivaler de Londres,' and who was hated by York and Gloucester (FROISSART), was specially charged with taking twenty-two prisoners out of Newgate and beheading them without trial at the 'Foul Oke' in Kent (*Rot. Parl.* p. 231). On 17 Feb. he was brought from the Tower to Westminster and put on his trial. He claimed trial by battle as a knight, but it was refused, and being again brought up on the 20th, he received sentence, and was ordered to be taken back to the Tower, whence the marshal should 'lui treyner parmye la dite cite de Loundres, et avant tan q'as ditz Fourches [Tyburn], et illeõqs lui pendre par le cool' (*ib.* iii. 237–8). This sentence was carried into effect, though he had 'many intercessors' among the citizens (T. WALS. ii. 173–4), but was reversed by Richard in his last struggle, 25 March 1399 (*Claus.* 22 *Rich. II*, p. 2, m. 6, dors.) Stow (*Annals*) wrongly believed that he was beheaded ('with the same axe he had prepared for other'). He was buried in the choir of the Grey Friars, afterwards Christ Church (STRYPE, iii. 133, where the date is wrongly given). Froissart (cap. 108) says that he was bewailed by the citizens, but this must have applied to his partisans. Walsingham (ii. 173–4) narrates the absurd charges brought against him at his fall.

J. H. R.

BREMER, SIR JAMES JOHN GORDON (1786–1850), rear-admiral, the son and grandson of naval officers, was entered as a first-class volunteer on board the Sandwich guardship at the Nore in 1794. This was only for a few months; in October 1797 he was appointed to the Royal Naval College at Portsmouth, and was not again embarked till 1802, when he was appointed to the Endymion as a midshipman under Captain Philip Durham. For the next fourteen years he was actively and continuously serving in different parts of the world. He was made lieutenant on 3 Aug. 1805, commander on 13 Oct. 1807, and

captain on 7 June 1814, but had no opportunities of achieving any special distinction. On 4 June 1815 he was nominated a C.B.; and on 24 Oct. 1816, whilst in command of the Comus frigate, he was wrecked on the coast of Newfoundland. In February 1824 he was sent, in command of the Tamar, to establish a colony on Melville Island, Australia; after which he went to India and took part in the first Burmese war. On 25 Jan. 1836 he was made a K.C.H., and in the following year was appointed to the Alligator, and again went out to Australia, where, the colonising of Melville Island having failed, he formed a settlement at Port Essington. Thence he again went to India, where, by the death of Sir Frederick Maitland, in December 1839, he was left senior officer for a few months, till superseded by Rear-admiral Elliot in July; and again in the following November, when Admiral Elliot invalided, till the arrival of Sir William Parker in August 1841. Sir Gordon Bremer had thus the naval command of the expedition to China during a great part of the years 1840-1, for which services he received the thanks of parliament, and was made K.C.B. on 29 July 1841. In April 1846 he was appointed second in command of the Channel squadron, with his broad pennant in the Queen; and in the following November to be commodore-superintendent of Woolwich dockyard, which post he held for the next two years. He attained his flag on 15 Sept. 1849, but died a few months later, on 14 Feb. 1850.

He married, in 1811, Harriet, daughter of Thomas Wheeler, and widow of the Rev. George Henry Glasse, and left a family of two sons and four daughters, the eldest of whom married Captain (afterwards Admiral) Sir Leopold Kuper.

[O'Byrne's Nav. Biog. Dict.; Gent. Mag. (1850), N.S. xxxiii. 534.] J. K. L.

BREMNER, JAMES (1784–1856), engineer and ship-raiser, was born at Keiss, parish of Wick, county of Caithness, on 25 Sept. 1784, being the son of a soldier. He received such education at Keiss as his mother's means could afford until 1798, when he was apprenticed to Robert Steele & Sons, shipbuilders of Greenock, whose establishment afforded every opportunity for both theoretical and practical instruction. He remained at Messrs. Steele's for about six years and a half. At the age of twenty-five, after having made two voyages to North America, he settled at Pulteney Town in his native parish, where he eventually occupied the shipbuilding yard for nearly half a century. During that time he built fifty-six vessels, from a ship of 510 tons to a small sloop of 45 tons. He was also engaged in designing and constructing harbours and piers on the northern coast of Scotland. His works of this kind included the reconstruction of the old harbour of Pulteney Town, the construction of Keiss harbour (1818), the reconstruction of Sarclet harbour near the bay of Wick (1835-6), the construction of Lossiemouth harbour, and the harbour of Pitullie, near Fraserburgh, besides surveying and preparing working plans for many other ports in Scotland.

Bremner evinced great ingenuity in the raising and recovering of wrecked vessels; and in the wide circuit between Aberdeenshire and the isle of Skye, comprehending the islands of Orkney, Shetland, and Lewis, and the critical navigation of the Pentland Firth, he raised no less than 236 vessels. With one of his sons he was employed in assisting to take the Great Britain off the strand at Dundrum Bay in August and September 1847. Bremner was elected a corresponding member of the Institution of Civil Engineers on 12 Feb. 1833, and received a Telford medal in 1844 for his papers on 'Pulteney Town Harbour,' 'Sarclet Harbour,' 'A New Piling Engine,' and 'An Apparatus for Floating Large Stones for Harbour Works.' For the last twelve years of his life he acted as agent at Wick for the Aberdeen, Leith, and Clyde Shipping Company. He died suddenly at Harbour Place, Pulteney Town, on 20 Aug. 1856. Bremner was the author of a tract, entitled 'Treatise on the Planning and Constructing of Harbours in Deep Water, on Submarine Pile Driving, the Preservation of Ships Stranded and Raising of those Sunk at Sea, on Principles of lately patented Inventions,' 1845, 8vo.

Of his numerous family the sons were all brought up as engineers; one of them, DAVID BREMNER, engineer for the Clyde trustees, died in 1852.

[Minutes of Proceedings of Institution of Civil Engineers (1857), xvi. 113-20.] G. C. B.

BREMNER, ROBERT (*d.* 1789), music publisher, was born in Scotland in the early part of the eighteenth century. He began life as a teacher of singing, but about 1748 set up in business in Edinburgh as a music printer and publisher, at the sign of the Harp and Hautboy, in High Street. Here he published, in 1756, a work entitled 'The Rudiments of Music; or, a Short and Easy Treatise on that Subject. To which is added, A Collection of the best Church tunes, Canons, and Anthems. This book, which is characterised by its sensible directions for church singing at a time

when ecclesiastical music was in a very corrupt state, was reissued in a second edition, published in 1762 at London, whither Bremner had in the meantime removed. His shop in London was at the sign of the Harp and Hautboy, opposite Somerset House in the Strand. Here he continued his publishing business with great success, besides bringing out several collections of 'Scots Songs,' the words of which were by Allan Ramsay, an instruction book for the guitar, 'Thoughts on the Performance of Concert Music,' 'The Harpsichord or Spinnet Miscellany. Being a Gradation of Proper Lessons from the Beginner to the tollerable (*sic*) Performer. Chiefly intended to save Masters the trouble of writing for their Pupils,' and 'Select Concert Pieces fitted for the Harpsichord or Pianoforte, with an Accompaniment for the Violin.' The last publication, of which several numbers appeared, contains a valuable collection of classical music. In the preface to it, Bremner mentions his having bought the celebrated manuscript wrongly known as 'Queen Elizabeth's Virginal Book' at the sale of Dr. Pepusch's library. For this he gave ten guineas: the manuscript passed from his hands into those of Earl Fitzwilliam, and is now preserved in the Fitzwilliam Library at Cambridge. In the latter part of his life Bremner lived at Kensington Gore, where he died 12 May 1789.

[Grove's Dict. of Musicians, i. 273 *b*, iv. 307 *b*; Gent. Mag. 1789, i. 471; Bremner's works mentioned above.] W. B. S.

BRENAN, — (*fl.* 1756), is the author of the 'Painter's Breakfast;' a dramatic satire, Dublin, 1756, 12mo. He is also credited with the production of a comedy, entitled 'The Lawsuit,' which Burke is said to have intended to publish by subscription, but which never saw the light. Of his life nothing whatever is known, except that he was a painter in Dublin. The 'Painter's Breakfast' is a clever work. Pallat, a painter, asks to breakfast some known patrons of art. He then, with the aid of Dactyl, a poet, and Friendly, a comedian, sells by auction as original works some copies of paintings executed by his acquaintance. The proceeds of the sale, after the deduction of the cost of the breakfast and the true value of the paintings, are to be devoted to a fund for the relief of lunatics. The intention is of course to ridicule would-be connoisseurs of art, who neglect modern work, and will hear only of the antique. The characters of Sir Bubble Buyall, Formal (a connoisseur), Lady Squeeze, Bow and Scrape (two hookers-in), and others are well drawn, and the piece has some humour.

[Biographia Dramatica; The Painter's Breakfast.] J. K.

BRENAN, JOHN (1768?–1830), physician, born at Ballaghide, Carlow, Ireland, about 1768, was the youngest of six children. His father, a Roman catholic, possessed some property. Brenan's earliest literary productions appear to have been epigrams and short poems, which he contributed to Dublin periodicals in 1793. He graduated as doctor of medicine in Glasgow, and established himself in that profession in Dublin about 1801. For some time he was a contributor of verses in the 'Irish Magazine,' commenced in Dublin in 1807 by Walter Cox. Cox was tried in Dublin in 1812 for publishing a production in favour of a repeal of the union between Great Britain and Ireland, and condemned to stand in the pillory and to be imprisoned for twelve months. While Cox was in gaol under this sentence, Brenan quarrelled with him, went over to the opposite party, and started the 'Milesian Magazine, or Irish Monthly Gleaner.' The first number appeared in April 1812, and in it and subsequent issues he assailed Cox with great acerbity. Brenan was ardently devoted to gymnastics, an expert wrestler, and occasionally showed symptoms of mental disorder. About 1812 puerperal fever and internal inflammation prevailed to a vast extent in Dublin. Brenan discovered a valuable remedy in preparations of turpentine, with which he successfully treated many cases. The greater part of the medical practice in Dublin at that time was in the hands of the College of Physicians. An old bylaw of the college forbidding members to hold consultations with non-members was, according to Brenan, put in operation to curtail his practice. Brenan stated that the Dublin physicians declined to use his remedy from personal jealousy. It was, however, adopted by practitioners with success in the country parts of Ireland, as well as in England and Scotland. In 1813 Brenan published at Dublin a pamphlet entitled 'Essay on Child-bed Fever, with remarks on it, as it appeared in the Lying-in Hospital of Dublin, in January 1813, &c.' In this publication he attacked the College of Physicians. He followed up the attack by a series of articles, both in verse and prose, in the 'Milesian Magazine,' in which he satirised the prominent members of that college. Brenan also attacked persons agitating for catholic emancipation. A government pension was alleged to have been given for these productions. Many of Brenan's satires were in the form of adaptations in verse of passages from the Latin classics, which he applied with much poignancy. Among these was an ela-

borate piece on Daniel O'Connell, then in the early stages of his career. The 'Milesian Magazine' was published at long intervals. The last number, which appears to have been that printed in 1825, contained a letter which Brenan addressed to the Marquis of Wellesley, lord-lieutenant of Ireland, advocating an inquiry into the administration of the Lying-in Hospital at Dublin, and stating the circumstances of his discovery in connection with turpentine. Brenan's death took place at Dublin in July 1830.

[Anthologia Hibernica, 1793-4; Masonic Magazine, 1793-4; Cox's Irish Magazine, 1812; Reflections upon Oil of Turpentine, and upon the present Condition of the Medical Profession in Ireland, 1817; Madden's United Irishmen, 1858.]

J. T. G.

BRENDAN or **BRENAINN**, SAINT (490?-573), of Birr, which was so called from the abundance of wells there (*birr*, *birra*, water), now Parsonstown, in the King's County, was born about A.D. 490. He was son of Neman, a poet, and Mansenna, and belonged to the race of Corb Aulam, great-grandson of Rudhraighe, from whom were the Clanna Rudhraighe. A disciple of St. Finnian of Clonard, he is described in the Life of St. Finnian as 'a prophet in those schools.' He belonged, like the other Brendan (of Clonfert), to the second order of Irish saints, and is sometimes distinguished as Brendan the Senior. He was present at the council in which St. Columba was excommunicated, but was his intimate friend, and is said to have been consulted by him as to the place he should choose for his exile, on which occasion he recommended Hy. The foundation of his monastery of Birr is placed by some immediately before 563, but by others somewhat earlier. In the 'Felire' of Oengus Céle Dé he is referred to at Nov. 29 as follows:—

> The royal feast of Brenann of Birr,
> Against whom burst the sea-level.
> Fair diadem, much enduring,
> White head of Ireland's prophets.

'Much enduring' is explained 'very great was he in enduring tribulations and troubles, or, in supporting the poor and needy for God's sake.' The note from the 'Lebar Brecc' explains the incident in the second line thus: 'The surge of the sea rose against him when he went thereon, and Brenainn, son of Findloga, caught him by the hand.' The term 'white head' seems to refer to the meaning of his name, for it may be observed that in the popular form of the name (Brendan) the termination is not the word *ān*, 'noble,' usually the suffix to Irish ecclesiastical names, as Colm-ān, Aid-ān, for the correct form in all Irish authorities is Brenann or Brenainn, of which Brenaind is a later form; this is interpreted Braen-*find*, or Braen the Fair (*Felire*, lxxxvi).

His death, which took place in the eightieth year of his age, the night before 29 Nov., has been assigned by Ussher to 571, but by Tighernach to 573, which Dean Reeves thinks more likely. St. Columba is represented as having been aware of his death at the time of its occurrence, and to have seen his soul entering heaven accompanied by angels. 'Get ready the sacred service of the eucharist immediately' (he said to his attendant), 'for this is the natal day of Brendan.' 'Why,' said the attendant, 'do you order the sacred rites to-day, for no messenger has come from Ireland with tidings of that holy man's death?' 'Go,' said Columba, 'and obey my orders, for last night I saw heaven open and choirs of angels descending to meet the soul of St. Brendan, and the whole world was illuminated by their brilliant and surpassing radiance.' His day in the calendar is 29 Nov.

[Reeves's Adamnan, pp. 209, 210, Dublin, 1857; Martyrology of Donegal, Dublin, 1864; Felire of Oengus Céle Dé, Transactions of Royal Irish Academy, pp. lxxxvi, clxvi, clxxiii; Ussher's Works, vi. 594, 595.]

T. O.

BRENDAN or **BRENAINN**, SAINT (484-577), of Clonfert, was born in 484, at Littus li, or Stagnum li, now Tralee, co. Kerry. He is termed son of Finnloga, to distinguish him from his contemporary, St. Brendan of Birr [q. v.], and Mocu Alta, from his great-grandfather, Alta, who was of the race of Ciar, descendant of Rudraighe, from whom were the Ciarraighe, who have given their name to Kerry. His parents, though free and well born, were in a relation of dependence, and under the rule of their relative, Bishop Erc. Some have thought this was the well-known bishop of Slane, co. Meath; but there were many of the name, and he seems to have been rather the head of a local monastery, and permanently resident in Kerry. Here Brendan was born, and when a year old was taken by Erc and placed in charge of St. Ita of Cluain Credhail, in the south-west of the county of Limerick. Remaining five years with her, he returned to Erc to begin his studies, and in course of time, when he had 'read through the canon of the Old and New Testaments,' he wished also to study the rules of the saints of Ireland. Having obtained Erc's permission to go to St. Jarlath of Tuam for the purpose, with the injunction to return to him for holy orders, he first paid a visit to St. Ita, 'his nurse.' She approved of his design, but

cautioned him 'not to study with women or virgins, for fear of scandal,' and he then pursued his journey, and arrived in due time at Tuam. On the completion of his studies there he returned to Bishop Erc, and was ordained by him, but never proceeded beyond the order of presbyter, such being the usage of the second order of Irish saints to which he belonged.

It seems to have been at this period that the desire took possession of him to go forth on the expedition which formed the basis of the 'Navigation of St. Brendan,' the most popular legend in the Middle Ages. Some difficulty has always been felt with regard to the date usually assigned to it, as he must have been then sixty years of age, and it is not easy to reconcile it with the other facts of his life (LANIGAN); but this difficulty seems to arise from the belief that there was but one voyage, as stated in the versions current abroad. The unpublished Irish life, in the 'Book of Lismore' (A.D. 1400), removes much of the difficulty by describing two voyages, one early in life and the other later on. It states that at his ordination the words of Scripture (St. Luke xviii. 29, 30) produced a profound impression on him, and he resolved to forsake his country and inheritance, beseeching his Heavenly Father to grant him 'the mysterious land far from human ken.' In his sleep an angel appeared to him, and said, 'Rise, O Brendan, and God will grant you the land you seek.' Rejoiced at the message he rises, and goes forth 'alone on the mountain in the night, and beholds the vast and dim ocean stretching away on all sides from him' (such is exactly the view from Brandon Hill), and far in the distance he seems to behold 'the fair and excellent land, with angels hovering over it.' After another vision, and the promise of the angel's presence with him, he goes forth on his navigation, but, after seven years' wandering without success, is advised to return to his country, where many were waiting for him, and there was work for him to do. That Brendan may have undertaken some such expedition, and visited some of the western and northern islands, is quite possible; for it is certain that Irish hermits found their way to the Hebrides, the Shetland and Faroe Islands, and even to Iceland (DICUIL).

Somewhere about this time may be placed his visit to Brittany, which is not noticed in the Irish life. He is said to have gone thither between 520 and 530. After a considerable stay he returned home. But the desire to reach the undiscovered land was not extinct, and now it revived with new vigour, and once more, after consulting Bishop Erc, he went to St. Ita and asked her 'what he should do about his voyage.' 'My dear son,' she replied, 'why did you go on your [former] expedition without consulting me? That land you are seeking from God you shall not find in those perishable leaky boats of hides; but, however, build a ship of wood, and you shall find "the far land."' The vessel of the first voyage is described in the 'Navigation' as covered with hides (SCHRÖDER). He then proceeded to Connaught, and built 'a large wonderful ship,' and engaging artificers and smiths, and putting on board many kinds of herbs and seeds, the party, sixty in all, embarked on their voyage, and, after many adventures, reached 'that paradise amid the waves of the sea.'

The story of the 'Navigation' had 'taken root in France as early as the eleventh century, was popular in Spain and Holland, and at least known in Italy, and was the favourite reading, not only of monks, but of the widest circle of readers' (SCHRÖDER); but it had been altered from its original form, the two voyages compressed into one, and the adventures of other Irish voyagers worked into it. The legend in this form is traced by Schröder to the Lower Rhine; but he is unable to conjecture why it was connected with Brendan's name. It was, however, only one of a class of Irish tales, known as '*Imramas*,' or expeditions, of which several are still extant; and the popularity of this particular legend abroad may be accounted for by the fact that when it was taken to the continent in the general exodus of Irish clergy in the ninth and following centuries, owing to the Danish invasions, the monks of Brendan's order in one of the numerous Irish foundations on the Rhine thought fit to exalt their patron by dressing up the legend in a manner suited to the popular taste.

Some of the adventures have been supposed to be derived from the 'Arabian Nights;' but there is reason to think that the converse is more likely (WRIGHT). There is proof of the intercourse of Irish monks with the East in the ninth century (DICUIL); and some of the stories, as that of the great fish, called in the 'Navigation' Iasconius (Ir. *iasc*, a fish), which Sinbad took for an island, are essentially of northern origin.

It seems to have been after his return from this voyage that he founded, in 553 (*A. F. M.*), the monastery of Cluain Fearta, 'the lawn of the grave,' now Clonfert, in the barony and county of Longford, which afterwards became a bishop's see.

He subsequently visited St. Columba at Hy, in company with two other saints. This must have been after 563, when he was in

his seventy-ninth year. On this occasion he may have founded the two churches in Scotland of which he was patron (Reeves).

The last time we hear of him is at the inauguration of Aedh Caemh, the first Christian king of Cashel, in 570, when he took the place of the official bard, MacLenini, who was a heathen. On this occasion Brendan was the means of the bard's conversion, when he gave him the name of Colman. He is since known as St. Colman of Cloyne. Brendan died in 577, in the ninety-fourth year of his age. His day in the calendar is 16 May.

BRENT, CHARLOTTE (*d.* 1802), afterwards Mrs. Pinto, singer, was the daughter of a fencing-master and alto singer, who sang in Handel's 'Jephtha' in 1752. Miss Brent was a favourite pupil of Dr. Arne, and for her he composed much of his later and more florid music, after his wife had retired from public life. Miss Brent's first appearance took place in February 1758 at a concert. On 3 March of the same year she sang at Drury Lane in Arne's 'Eliza,' performed as an oratorio for the composer's benefit. Her voice at this time had not attained its full strength, and Garrick (who was no musician) refused to give her an engagement. However, she was more fortunate at Covent Garden, where she appeared as Polly in the 'Beggar's Opera' on 10 Oct. 1759, and repeated the same part for thirty-seven consecutive nights. The following are some of the principal parts which she played at Covent Garden during her ten years' connection with it. Rachel in the 'Jovial Crew' (14 Feb. 1760), Sabrina in 'Comus' (27 March 1760), the Fine Lady in 'Lethe' (8 April 1760), Sally in 'Thomas and Sally' (28 Oct. 1760), Mandane in 'Artaxerxes' (2 Feb. 1762), Margery in the 'Dragon of Wantley' (4 May 1762), Rosetta in 'Love in a Village' (8 Dec. 1762), Flirtilla in the 'Guardian Outwitted' (12 Dec. 1764), Patty in the 'Maid of the Mill' (31 Jan. 1765), Miss Biddy in 'Miss in her Teens' (22 March 1766), Lady Lucy in the 'Accomplished Maid' (3 Dec. 1766), Rosamund in the opera of that name (21 April 1767), Jacqueline in the 'Royal Merchant' (14 Dec. 1767), Sophia in 'Tom Jones' (14 Jan. 1768), and Thais in the 'Court of Alexander' (1770). She was the original Sally, Mandane, Flirtilla, Rosetta, and Patty, most of which parts were written to display her perfect execution and good style. In 1764–5 Tenducci and Miss Brent performed in 'Samson' and other Handelian selections at Ranelagh. She sang at the Hereford festival in 1765, at Gloucester in 1766, and at Worcester in 1767. In the autumn of 1766 she became the second wife of Thomas Pinto; her marriage is said to have so disgusted Dr. Arne that on hearing her mentioned he exclaimed, 'Oh, sir, pray don't name her; she has married a fiddler.' About 1770 she left Covent Garden, where Miss Catley was beginning to occupy the place she had hitherto filled, and for the next ten years she went a succession of tours with her husband in Scotland and Ireland, appearing at Dublin in 1773 as Urganda in Michael Arne's 'Cymon.' Although she had acquired large sums of money, she was embarrassed in her old age. In 1784 she was living in Blackmoor Street, Clare Market. On 22 April of this year she reappeared at Covent Garden for one night in 'Comus,' singing for the benefit of Hull, the stage-manager. It was said that her voice still 'possessed the remains of those qualities for which it had been so much celebrated—power, flexibility, and sweetness.' After her husband's death she devoted herself to the education of her talented stepgrandson, G. F. Pinto [q. v.], whose premature decease she survived. In the latter part of her life Mrs. Pinto lived at 6 Vauxhall Walk, and was so poor that Fawcett, the actor, used to give her a dinner every Sunday, and 'sometimes a bit of finery, of which she was very fond.' Here she died 10 April 1802, and was buried (in the same grave as G. F. Pinto) in the churchyard of St. Margaret's, Westminster, on the 15th of the same month. The only portrait of her seems to be a small medallion with Beard in 'Thomas and Sally,' printed for Robert Sawyer.

BRENT, JOHN (1808–1882), antiquary and novelist, was born at Rotherhithe on 21 Aug. 1808, and was the eldest son of a father of the same name, a shipbuilder there, who about the year 1821 removed to Canterbury, and became thrice mayor of the city

and deputy-lieutenant of the county. His mother was Susannah, third daughter of the Rev. Sampson Kingsford of Sturry, near Canterbury (*Gent. Mag.* vol. lxxvii. pt. ii. 1074). In his early days he carried on the business of a miller, occupied for many years a seat on the council of the Canterbury corporation, and was elected an alderman, but resigned that position on being appointed city treasurer. Brent died at his house on the Dane John, Canterbury, 23 April 1882. During the course of a long life, he was indefatigable in his attempts to throw light on the past history of the city and county in which he dwelt. He became a fellow of the Society of Antiquaries in April 1853, and was also a member of the British Archæological Association and of the Kent Archæological Society. His contributions to antiquarian literature are mostly to be found in the various publications of these societies. To the forty-first volume of the 'Archæologia' (pp. 409–20) he communicated a paper of value to ethnological science, being an account of his 'Researches in an Anglo-Saxon Cemetery at Stowting, in Kent, during the autumn of 1866.' In 1855 he had published a revised edition of Felix Summerly's 'Handbook for Canterbury,' and in 1875 there appeared his 'Catalogue of the Antiquities in the Canterbury Museum,' of which he was honorary curator. His work upon 'Canterbury in the Olden Time,' 8vo, 1860 (enlarged edition in 1879), from its research and originality, bears testimony to his unwearied industry and his ability as an antiquarian topographer. Brent also claims notice as a poet and novelist, having published 1. 'The Sea Wolf, a Romance,' 12mo, London, 1834. 2. 'Lays of Poland,' 12mo, London, 1836. 3. 'Lays and Legends of Kent,' 12mo, Canterbury, 1840; second edition, 1851. 4. 'Guillemette La Delanasse,' a poem, 12mo, Canterbury, 1840. 5. 'The Battle Cross. A Romance of the Fourteenth Century,' 3 vols. 12mo, London, 1845. 6. 'Ellie Forestere, a novel,' 3 vols. 12mo, London, 1850. 7. 'Sunbeams and Shadows,' poems, printed for private circulation, 1853. 8. 'Village Bells, Lady Gwendoline, and other Poems,' 8vo, London, 1865; second edition, 1868. 9. 'Atalanta, Winnie, and other Poems,' 12mo, London, 1873. 10. 'Justine,' a poem, 12mo, London, 1881. A collected edition of his poems was published in 2 vols. 8vo, London, 1884. Numerous tales, poems, and miscellaneous articles from his pen are also to be found in the various magazines devoted to light literature. At the time of the insurrection in Poland, Brent became the local secretary of the Polish Association.

BRENT, SIR NATHANIEL (1573?–1652), warden of Merton College, Oxford, was the son of Anchor Brent of Little Wolford, Warwickshire, where he was born about 1573. His grandfather's name was Richard, and his great-grandfather was John Brent of Cosington, Somersetshire. He became 'portionist,' or postmaster, of Merton College, Oxford, in 1589; proceeded B.A. on 20 June 1593; was admitted probationer fellow there in 1594, and took the degree of M.A. on 31 Oct. 1598. He was proctor of the university in 1607, and admitted bachelor of law on 11 Oct. 1623. In 1613 and 1614 he travelled abroad 'into several parts of the learned world, and underwent dangerous adventures in Italy to procure the "History of the Council of Trent," which he translated into English' (WOOD). In 1616 Carleton, ambassador at the Hague, writes to Winwood that he leaves Brent, 'one not unknown to your honour,' to conduct the business of the embassy during his temporary absence at Spa. On 31 Oct. of the same year Carleton writes again to Winwood that Brent is bringing home despatches, and hopes to secure an office in Ireland, for which Carleton recommends him highly. On 26 Nov. Winwood replied that the post in question, that of 'secretary of Ireland,' had been conferred on Sir Francis Annesley before Brent's arrival in England. Soon after the close of his foreign tour Brent married Martha, the daughter and heiress of Robert Abbot, bishop of Salisbury, and niece of George Abbot, archbishop of Canterbury.

The influence of the Abbots secured Brent's election in 1622 to the wardenship of Merton College, in succession to Sir Henry Savile. He was afterwards appointed commissary of the diocese of Canterbury, and vicar-general to the archbishop, and on Sir Henry Marten's death became judge of the prerogative court. During the early years of Laud's primacy (1634–7), Brent made a tour through the length and breadth of England south of the Trent, reporting upon and correcting ecclesiastical abuses (GARDINER, *Hist.* 1884, viii. 108–17; cf. *Hist. MSS. Comm.* 4th Rep. 131–147). But Brent chiefly owed his fame to his connection with Merton College. Wood, who was largely indebted to Brent, refers to him as one who, 'minding wealth and the settling a family more than generous actions,' allowed the college to lose much of the reputation it had acquired under Sir Henry Savile (WOOD, *Athenæ*, ed. Bliss, ii. 316).

Complaints were frequently made of Brent's long sojourns in London, where he had a house of his own in Little Britain. On 23 Aug. 1629 he was knighted at Woodstock by the king, who was preparing to pay a state visit to Oxford. On 24 Aug. Brent entertained the French and Dutch ambassadors at Merton, and on 27 Aug. gave a dinner to the king and queen. In 1629–30 he was admitted to the freedom of the city of Canterbury *honoris causa* (*Hist. MSS. Comm.* 9th Rep. 163 *b*). In August 1636 Brent presented Prince Charles and Prince Rupert for degrees, when Laud, who had become chancellor in 1630, was entertaining the royal family. In 1638 Laud held a visitation of Merton College, and insisted on many radical reforms. Laud stayed at the college for many weeks, and found Brent an obstinate opponent. Laud complains in his 'Diary' that 'the warden appeared very foul.' Some outrageous charges of maladministration were indeed brought against Brent by some of those whom Laud examined, but the visitor took no public proceedings against Brent on these grounds. His letters to the warden are, however, couched in very haughty and decisive language. Brent ultimately gained the victory over Laud. The tenth charge in the indictment drawn up against the archbishop in 1641 treats of the unlawful authority exercised by him at Merton in 1638. The warden came forward as a hostile witness at Laud's trial. His testimony as to Laud's intimacy with papists and the like was very damaging to the archbishop, but it does not add much to his own reputation. Laud replied to Brent's accusations in his 'History of the Troubles and Trial' (*Anglo-Cath. Libr.* iv. 194). On the outbreak of the civil wars Brent sided with the parliament. Before Charles I entered Oxford (29 Oct. 1642), the warden had abandoned Oxford for London. On 27 Jan. 1644–1645 Charles I wrote to the loyal fellows at Merton that Brent was deposed from his office on the grounds of his having absented himself for three years from the college, of having adhered to the rebels, and of having accepted the office of judge-marshal in their ranks. He had also signed the covenant. The petition for the formal removal of Brent, to which the king's letter was an answer, was drawn up by John Greaves, Savilian professor of geometry. On 9 April the great William Harvey was elected to fill Brent's place; but as soon as Oxford fell into the hands of Fairfax, the parliamentary general (24 June 1646), Brent returned to Merton, and apparently resumed his post there without any opposition being offered him. In 1647 Brent was appointed president of the famous parliamentary commission, or visitation, ordered by the parliament 'for the due correction of offences, abuses, and disorders' in the university. The proceedings began on 3 June, but it was not until 30 Sept. that the colleges were directed to forward to Merton their statutes, registers, and accounts to enable Brent and his colleague to really set to work. On 12 April 1648 Brent presented four of the visitors for the degree of M.A. Early in May of the same year Brent showed more mercy than his colleagues approved by 'conniving' at Anthony à Wood's retention of his postmastership in spite of his avowed royalism. Wood tells us that he owed this favour to the intercession of his mother, whom Brent had known from a girl. On 17 May 1649 Fairfax and Cromwell paid the university a threatening visit, and malcontents were thenceforth proceeded against by the commission with the utmost rigour. But Brent grew dissatisfied with its proceedings. The visitors claimed to rule Merton College as they pleased, and, without consulting the warden, they admitted fellows, masters, and bachelors of arts. On 13 Feb. 1650–1 he sent a petition of protest against the conduct of the visitors to parliament. The commissioners were ordered to answer Brent's complaint, but there is no evidence that they did so, and in October 1651 Brent retired from the commission. On 27 Nov. following he resigned his office of warden, nominally in obedience to an order forbidding pluralities, but his refusal to sign 'the engagement,' which would have bound him to support a commonwealth without a king or a house of lords, was probably the more direct cause of his resignation. Brent afterwards withdrew to his house in Little Britain, London, and died there on 6 Nov. 1652. He was buried in the church of St. Bartholomew the Less on 17 Nov. Wood states that he had seen an epitaph in print on Brent by one 'John Sictar, a Bohemian exile, whom Brent had provisioned' in his lifetime.

Brent's daughter Margaret married Edward Corbet of Merton College, a presbyterian, on whom Laud repeatedly refused to confer the living of Chartham. Brent's literary work was small. In 1620 he translated into English the 'History of the Council of Trent' by Pietro Soane Polano (i.e. Pietro Sarpi). A second edition appeared in 1629, and another in 1676. Archbishop Abbot had caused the Italian original to be published for the first time in 1619 in London. In 1625, 'at the importunity of George [Abbot], archbishop of Canterbury,' Brent edited and republished the elaborate defence of the church

of England 'Vindiciæ Ecclesiæ Anglicanæ,' first published in 1613 by Francis Mason, archdeacon of Norfolk (STRYPE, *Parker*, i. 117). He did 'review it,' says Wood (*Athenæ Oxon.*, Bliss, ii. 307), 'examine the quotations, compare them with the originals, and at length printed the copy as he found it under the author's hands.'

BRENTFORD, EARL OF (1573?–1651). [See RUTHVEN, PATRICK.]

BRENTON, EDWARD PELHAM (1774–1839), captain in the royal navy, younger brother of Vice-admiral Sir Jahleel Brenton [q. v.], was born at Rhode Island on 20 July 1774. He entered the navy in 1788, and, after serving in the East Indies and in the Channel fleet, was made lieutenant on 27 May 1795. His services in that rank in the North Sea, on the Newfoundland station, and in the West Indies, call for no special notice. On 29 April 1802 he was made commander, and on the renewal of the war in 1803 was appointed to the command of the Merlin, and employed in the blockade of the north coast of France. On 16 Dec. 1803 he succeeded in a gallant attempt to destroy the Shannon frigate, which had got on shore not far from Cape Barfleur, and had been taken possession of by the French. In January 1805 he was appointed to the Amaranthe brig, in which he cruised with some success in the North Sea; and in 1808 he was sent to the West Indies, where, for his distinguished gallantry in the attack on a small French squadron under the batteries of St. Pierre of Martinique, he was advanced to post rank, his commission being dated back to 13 Dec. 1808, the day of the action. Anticipating his promotion, the admiral, Sir Alexander Cochrane, had appointed him acting captain of the Pompée (74), bearing the broad pennant of Commodore Cockburn, under whose immediate command he served with the brigade of seamen landed for the reduction of Martinique. He afterwards returned to Europe, with the commodore, in the Belleisle, in charge of the garrison, who, according to the capitulation, were to be conveyed to France and there exchanged. As, however, the French government refused to restore an equivalent number of English, the prisoners, to the number of 2,400, were carried to Portsmouth and detained there till the end of the war. Captain Brenton was afterwards employed in convoy service, and in August 1810 was appointed to command the Spartan frigate, in succession to his brother [see BRENTON, SIR JAHLEEL]. In the course of 1811 the Spartan was sent to North America, and continued on that station during the greater part of the war with the United States, but met with no opportunity of distinguished service. She returned to England in the autumn of 1813, when Brenton went on half-pay; nor did he ever serve again, with the exception of a few months in the summer of 1815, when he acted as flag-captain to Rear-admiral Sir Benjamin Hallowell.

Brenton now devoted a large portion of his time to literary pursuits, and published in 1823 a 'Naval History of Great Britain from the year 1783 to 1822,' 5 vols. 8vo; and in 1838 the 'Life and Correspondence of John, Earl of St. Vincent,' 2 vols. 8vo. As an officer of rank, who had been actively employed during all the important part of the period of his history, his opportunities of gaining information were almost unequalled; but he seems to have been constitutionally incapable of sifting such evidence as came before him, and to have been guided more frequently by prejudice than by judgment. The plan of his work is good and comprehensive, but the execution is feeble, and its authority as to matter of fact is of the slenderest possible. In addition to these more important literary labours, he took an active, and latterly an absorbing, part in the promotion of temperance societies, in the establishment and conduct of the Society for the Relief of Shipwrecked Mariners, and more especially of the Children's Friend Society, the intention of which was, in many respects, better than the results. These, in fact, drew down on him and his management much harsh criticism, which he felt severely, and which to a serious extent embittered the closing years of his life. He died suddenly on 6 April 1839. He married, in March 1803, Margaret Diana, daughter of General Cox, by whom he had a large family.

In addition to the more bulky works already mentioned, he was also the author of 'The Bible and Spade: an Account of the Rise and Progress of the Children's Friend Society,' 1837, 12mo; and of several pamphlets on 'Suppression of Mendicity,' 'Poor Laws,' 'Juvenile Vagrancy,' and similar subjects.

[Marshall's Royal Nav. Biog. v. (suppl. part i.) 411; Memoir of Captain Edward Pelham Brenton, with Sketches of his Professional Life and Exertions in the Cause of Humanity as con-

nected with the Children's Friend Society, &c.; Observations upon Brenton's Naval History and Life of the Earl of St. Vincent, by his brother, Vice-admiral Sir Jahleel Brenton, 1842, 8vo, a very one-sided view of Captain Brenton's great merits as an historian and as a philanthropist; Quarterly Review, lxii. 424, a severe, but not too severe, article on the Life of Lord St. Vincent.]

J. K. L.

BRENTON, Sir JAHLEEL (1770–1844), vice-admiral, eldest son of Rear-admiral Jahleel Brenton, the head of a family which had emigrated to America early in the seventeenth century, was born in Rhode Island on 22 Aug. 1770. When the war of independence broke out, Mr. Brenton, then a lieutenant in the navy, adhered to the royalist party, and his wife and children were sent to England. He himself was in 1781 promoted to the command of the Queen, armed ship, on board which ship his son Jahleel was entered as a midshipman. For two years the boy served under his father's immediate command, and on the peace in 1783 was sent to school at Chelsea, where, and afterwards in France, he continued till 1787, when he again entered the navy as a midshipman. In 1790, having passed his examination, and seeing no chance of either employment or promotion, he accepted a commission in the Swedish navy, and took part in the battles of Biorkosund on 3 and 4 June, and of Svenskasund on 9 July. In later life, when deeply impressed by religious ideas, he 'felt and acknowledged the guilt of this step.' On 20 Nov. 1790 he was promoted to the rank of lieutenant in the English navy, and returned home in consequence. His service during the succeeding years, mostly in the Mediterranean, does not require any special notice. In the battle off Cape St. Vincent he was, still a lieutenant, on board the Barfleur, and in the course of 1798 he obtained from the commander-in-chief an acting order to command the Speedy brig, though he was not confirmed in the rank till 3 July 1799. His conduct on several occasions in action with the enemy's gunboats won for him the approval of the admiralty and his post rank, 25 April 1800, when he was appointed temporarily to the Généreux prize, giving up the command of the Speedy to Lord Cochrane, who rendered her name immortal in the history of our navy. In the following January he was appointed to the Cæsar, as flag-captain to Sir James Saumarez, and had thus an important part in the unfortunate battle of Algeziras on 6 July, and in the brilliant defeat of the allied squadron in the Straits on 12 July 1801. He continued in the Cæsar, after the peace, till March 1802, when he obtained leave to return to England, chiefly, it would seem, in order to be married to Miss Isabella Stewart, an American lady to whom he had been long engaged.

In March 1803 he was appointed to the Minerve frigate, but had only just joined her when a severe wound, given by a block falling on his head, compelled him to go on shore; he was not able to resume the command till June, and in his first cruise, having chased some vessels in towards Cherbourg in a thick fog, the ship got aground under the guns of the heaviest batteries (2 July 1803). After sustaining the enemy's fire for ten hours, and failing in all attempts to get her off, Brenton was compelled to surrender. He and the whole ship's company were made prisoners of war, and so the greater number of them continued till the peace in 1814; but Brenton himself was fortunate in being exchanged in December 1806 for a nephew of Masséna, who had been taken prisoner at Trafalgar. He was shortly afterwards tried for the loss of the Minerve, and on his honourable acquittal was at once appointed to the Spartan, a new frigate of 38 guns, ordered to the Mediterranean. The service there was arduous and honourable, but years passed away without leading to any especial distinction. In October 1809 the Spartan was part of the force engaged in the reduction of the Ionian Isles, and in May 1810, whilst cruising in company with the Success, of 32 guns, and the Espoir brig, chased a small French squadron into Naples. This consisted of the Cérès frigate of the same force as the Spartan, though with about one-fourth more men, the Fama frigate of 28 guns, a brig, a cutter, and seven gunboats. Brenton, feeling certain that the French ships would not come out in the face of two frigates, despatched the Success to the southward, and on the morning of 3 May stood back towards Naples, hoping to tempt the enemy to come out. They had anticipated his wish, and having taken on board some 400 soldiers, in addition to their already large complements, met the Spartan in the very entrance of the bay, about midway between Ischia and Capri. The action that ensued was extremely bloody, for the Spartan's broadsides told with terrible effect on the crowded decks of the Cérès and her consorts, while on the other hand the heavy fire of the gunboats inflicted severe loss on the Spartan. Brenton himself was badly wounded in the hip by a grapeshot, and during the latter part of the fight the Spartan was commanded by her first-lieutenant, Willes, the father of the present Admiral

Sir George Ommanney Willes. The brig was captured, but, the Spartan's rigging being much cut, the Cérès and Fama succeeded in getting under some batteries in Baia Bay (James, *Naval History*, edit. 1859, v. 115). For his gallant and skilful conduct of the action Willes was deservedly promoted; and Captain Brenton's bravery, his tactical skill, and the severity of his wound won for him sympathy and admiration which forgot to remark on his mistaken judgment in sending the Success away—mistaken, for the resolve of the enemy to come out was formed quite independently of the Success's absence. The Patriotic Fund at Lloyd's voted him a sword, value one hundred guineas; the king of the Two Sicilies presented him with the Grand Cross of St. Ferdinand; he was made a baronet on 3 Nov. 1812, and a K.C.B. on 2 Jan. 1815.

Brenton's wound made it necessary for him to return to England, which he was permitted to do in the Spartan; and for nearly two years he was on shore, suffering much pain, aggravated by the loss of all his property by the failure of his agents, and by the loss of a prize appeal which involved him to the extent of 3,000*l*. This liability, however, some friends took on themselves, trusting to have it made good from the bankrupt's estate; and a pension of 300*l*. in consideration of his wound relieved him of this pressing pecuniary anxiety. In March 1812, having partly recovered from his wound, he accepted the command of the Stirling Castle, 74 guns, in the Channel; but feeling that his lameness and the occasional pain incapacitated him for active service, he soon resigned the appointment. Towards the close of 1813 he was appointed commissioner of the dockyard at Port Mahon, and on the abolition of that establishment at the peace he was sent to the Cape of Good Hope in the same capacity. The establishment there was also reduced on the death of Napoleon in 1821, and Brenton returned to England in January 1822. He then for some time had the command of the royal yacht, and afterwards of the guardship at Sheerness. He attained his flag in 1830, and in 1831, on the death of Captain Browell, was appointed lieutenant-governor of Greenwich Hospital. In course of seniority he would have been included in the promotion on the queen's coronation, and have been made a vice-admiral; but that being incompatible with his office at Greenwich, the rank was held in abeyance, though given him, with his original seniority, on his retirement in 1840. His health had during all these years been very broken, and he died on 3 April 1844.

During a great part of his life he devoted much time and energy to business connected with religious or charitable organisations, and in assisting his brother [see Brenton, Edward Pelham], of whom he wrote a memoir referring chiefly to these pursuits. He was also the author of 'The Hope of the Navy, or the True Source of Discipline and Efficiency' (cr. 8vo, 1839), a religious essay; 'An Appeal to the British Nation on behalf of her Sailors' (12mo, 1838); and some pamphlets. He was twice married: his first wife died in 1817, and in 1822 he married a cousin, Miss Harriet Brenton, who survived him. He left only one son, Lancelot Charles Lee Brenton, who, after taking his degree at Oxford, became a nonconformist minister; on his death, without issue, the baronetcy became extinct.

[Memoir of the Life and Services of Vice-admiral Sir Jahleel Brenton, Bart., K.C.B., edited by the Rev. Henry Raikes, Chancellor of the Diocese of Chester, 8vo, 1846—a ponderous work, smothered in a confused mass of religious meditation; a somewhat abridged edition, edited by Sir L. Charles L. Brenton, was published in 1855; some of Sir Jahleel's official correspondence, whilst at the Cape, with Colonel (afterwards Sir Hudson) Lowe is in Brit. Mus. Add. MSS. 20139, 20189-91, 20233.] J. K. L.

BRERELEY, JOHN. [See Anderton, James.]

BRERELEY or BRIERLEY, ROGER (1586-1637), divine and poet, was born on 4 Aug. 1586, at Marland, then a hamlet in the parish of Rochdale, where Thomas Brereley, his father, and Roger, his grandfather, were farmers. The name is spelled in many ways, but it seems best to adhere to the form which constantly recurs in the Rochdale baptismal register, as this undoubtedly represents the right pronunciation. From his father's brother Richard the Brearleys of Handworth, Yorkshire, are descended. He had three brothers and two sisters younger than himself. Brereley himself began life as a puritan. He took orders and became perpetual curate of Grindleton Chapel, in the parish of Mitton in Craven. The stipend (in 1654) was worth 5*l*. He held (in 1626) a close in Castleton, in the manor of Rochdale, which had belonged to his grandfather. His preaching was simple and spiritual, and his followers soon became distinguished as a party. As early as 1618 Nicholas Assheton, recording the burial of one John Swinglehurst, adds 'he died distract; he was a great follower of Brierley.' J. C., the writer of the first notice of his life, says: 'Because they could not well stile them by the name of Breirlists, finding no fault in his doctrine, they then

styled his hearers by the name of Grindetonians (*sic*), by the name of a town in Craven, called Grindleton, where this author did at that time exercise his ministry, thinking by his name to render them odious, and brand them for some kind of sectaries; but they could not tell what sect to parallel them to, hence rose the name Grindletonism.' And Brereley himself, in his piece 'Of True Christian Liberty,' writes:—

I was sometime (as then a stricter man)
By some good fellows tearm'd a puritan.
. . . .
And now men say, I'm deeply drown'd in schism,
Retyr'd from God's grace unto Grindletonism.

In a sermon preached at Paul's Cross on 11 Feb. 1627, and published under the title of 'The White Wolfe,' 1627, Stephen Denison, minister of St. Catherine Cree, charges the 'Gringltonian familists' with holding nine points of an antinomian tendency. These nine points are repeated from Denison by Ephraim Pagitt in his 'Heresiography' (2nd ed. 1645, p. 89), and glanced at by Alexander Ross, *Παναρέβεια* (2nd ed. 1655, p. 365). Pagitt is the authority Sir Walter Scott gives for the extraordinary collocation (*Woodstock*, 1826, iii. 205): 'Those Grindletonians or Muggletonians in whom is the perfection of every foul and blasphemous heresy, united with such an universal practice of hypocritical assentuation, as would deceive their master, even Satan himself.' The nine points may perhaps be a caricature of positions advanced by some of Brereley's hearers, but they bear no resemblance to his own teaching. If Denison derived them from the 'fifty articles' mentioned by J. C., as exhibited against Brereley at York by direction of the high commission, we can easily understand that 'when he came to his trial not one of them [was] directly proved against him.' This trial must have been prior to 1628, for it was held before Archbishop Tobias Matthew, who died 29 March in that year. Matthew, a strict and exemplary prelate, sustained Brereley in the exercise of his ministry, and before leaving York he preached in the cathedral. It is certain that Brereley was not conscious of any deflection from Calvinistic orthodoxy. He expressly censures Arminius (*Serm.* 21), 'who will needs set rules and laws to God.' He calls the heresies of Nestorius, Eutyches, &c., 'little holes in Christ's ship' (*Poems*, p. 46). Although his language about the second Person of the Trinity may be thought to show traces of Socinian influence, no antitrinitarian heresy seems to have been charged upon him. Denison's most damaging point is clean contrary to Brereley's own language. He quaintly owns that 'men no angels are,' and he doubts the possibility of perfection in the saints on earth. He is very strong against mere forms; for instance, he calls 'bread and wine a silly thing, where the heart is not led further' (*Serm.* 9). But he was the very opposite of a sectary, and desired to remain a humble son of the church. In 1631 Brereley was instituted to the living of Burnley, Lancashire. He died in June 1637, the Burnley register recording that 'Roger Brearley, minister,' was buried 13 June. He was married, and had a daughter Alice, living in 1636.

His literary remains are: 1. 'A Bundle of Soul-convincing, directing, and comforting Truths; clearly déduced from divers select texts of Holy Scripture. . . . Being a brief summary of several sermons preached at large by . . . M. Rodger Breirly . . . Edinburgh, printed for James Brown, bookseller in Glasgow, 1670, sm. 8vo (this, which can hardly be the first edition, consists of twenty-seven sermons, and the biographical 'Epistle to the Reader,' by J. C., who says of the origin of the volume: 'After his death a few headnotes of some of his sermons came to my view,' perhaps implying that the notes were Brereley's own). 2. Another edition, London, printed by J. R. for Samuel Sprunt, 1677, 18mo, is probably a reprint from an earlier issue; it reckons the sermons as twenty-six in number, what is Sermon 22 in the 1670 edition being not numbered, but headed 'Exposition,' &c. (it is on the beatitudes). It contains also, after the sermons, the following pieces in verse: 'The Preface of Mr. Brierly;' 'Of True Christian Liberty;' 'The Lord's Reply,' four pieces thus headed, alternated with three pieces headed 'The Soul's Answer,' 'The Song of the Soul's Freedom,' 'Self Civil War.' The spelling of the poems is often interesting, as indicating a northern pronunciation, and there are a few Lancashire words; the punctuation is atrocious. There is often much pathos in Brereley's rude lines; his spirit reminds one of Juán de Valdés, none of whose writings were translated in his time.

BRERETON, JOHN (*fl.* 1603), voyager to New England, has left few records of his life. His birthplace is unknown, and to which branch of the Brerетons of Brereton, Cheshire, he belonged is uncertain, although he was

probably a relative of Sir William Brereton (1604–1661) [q. v.], major-general of Cheshire, who, before his military career, was interested in American colonisation, grants of land along the north-eastern coast of Massachusetts Bay having been made to him by Sir Ferdinando Gorges at a time when he intended to settle there. He joined Captain Bartholomew Gosnold, Bartholomew Gilbert, Gabriel Archer, and others to make the first English attempt to settle in the land since called New England. Twenty-four gentlemen and eight sailors left Falmouth in a small bark, the Concord, on 26 March 1603, twelve of them intending to settle, while twelve others returned home with the produce of the land and of their trading with the natives. The voyage was sanctioned by Sir Walter Raleigh, who had an exclusive crown grant of the whole coast. Instead of making the circuitous route by the Canaries, Gosnold steered, as the winds permitted, due west, only southing towards the Azores, and was the first to accomplish a direct course to America, saving 'the better part of a thousand leagues.' By 15 May the voyagers made the headland which they named Cape Cod. Here Gosnold, Brereton, and two others went ashore on 'the white sands,' the first spot in New England ever trodden by English feet. Doubling the Cape and passing Nantucket, they touched at Martha's Vineyard, and passing round Dover Cliff entered Buzzard's Bay, which they called Gosnold's Hope, reached the island of Cuttyhunk, which they named Elizabeth's Island. Here they determined to settle; in nineteen days they built a fort and storehouse in an islet in the centre of a lake of three miles compass, and began to trade with the natives in furs, skins, and the sassafras plant. They sowed wheat, barley, and peas, and in fourteen days the young plants had sprung nine inches and more. The country was fruitful in the extreme. It was decided, however, that so small a company would be useless for colonisation; their provisions, after division, would have lasted only six weeks. The whole company therefore sailed for England, making a very short voyage of five weeks, and landed at Exmouth on 23 July. Their freight realised a great profit, the sassafras alone selling for 336*l.* a ton.

Brereton wrote 'A Briefe Relation of the Discoverie of Elizabeth's Ile, and some others towards the North Part of Virginie . . . written by John Brierton, one of the Voyage,' London, 1602, 8vo. A second impression was published the same year entitled 'A brief and true Relation of the Discovery of the North Part of Virginia . . . written by John Brereton, one of the Voyage,' London, 1602, 8vo. To this edition is added 'A Treatise of M. Edward Hayes, containing important inducements for the planting in these parts,' &c. Purchas gives a chapter headed 'Notes taken out of a Tractate written by James Rosier to Sir Walter Raleigh;' but this is signed 'John Brereton,' and is evidently part of a letter written by him. Rosier was not with Brereton, but was a fellow-voyager in Weymouth's expedition five years afterwards. Of Brereton nothing more is known. Captain John Smith, in his 'Adventures and Discourses,' speaks of 'Master John Brereton and his account of his voyage' as fairly turning his brains, and impelling him to cast in his lot with Gosnold and Wingfield, and make that subsequent voyage which resulted in the planting and colonisation of Virginia in 1607.

[Stith's Hist. of Virginia, p. 30, Massachusetts Historical Collections, 3rd. ser. viii. 83–123; Purchas His Pilgrimes, 'the 4th part,' pp. 1646, 1656; Belknap's American Biog. (Hubbard's), 1844, ii. 206; Anderson's Hist. of Commerce, A.D. 1602; Hakluyt, iii. 246; Pinkerton's Voy. and Trav. xii. 219, xiii. 19; Bancroft's United States, i. 88; Ormerod's Cheshire, iii. 51; Holmes's Annals of America, i. 117; Beverley's Hist. of Virginia, p. 19; the Adventures and Discourses of Capt. John Smith (Ashton's reprint, 1883), p. 69; Biogr. Brit. under 'Greenville,' p. 2284, note *f*.] J. W.-G.

BRERETON, OWEN SALUSBURY (1715–1798), antiquary, born in 1715, was son of Thomas Brereton, by his first wife, Miss Trelawney. The father came to own Shotwick Park, Cheshire, and other property through his second marriage with Catherine, daughter of Salusbury Lloyd, M.P. for Liverpool 1724 till his death in 1756. Lloyd altered his surname to Salusbury; Owen Brereton added that name on succeeding to estates in the counties of Chester, Denbigh, and Flint on his father's death. He was admitted a scholar of Westminster School in 1729, and was elected to Trinity College, Cambridge, in 1734. He was called to the bar in 1738, and in that year held the post of a lottery commissioner. In September 1742 he was appointed recorder of Liverpool, an office he retained till his death, a period of fifty-six years. When he proposed to resign in 1796, he was requested by the corporation to retain the situation, and they appointed a deputy to relieve him of the pressure of its duties. He became a member of the Society of Arts in 1762, and was vice-president from 1765 to 1798, in which capacity he rendered great service to the society. He was also a member of the Royal Society and of the Society of Anti-

quaries (elected 1763), a bencher of Lincoln's Inn, treasurer of that body, and keeper of the Black Book. He was member of parliament for Ilchester in Somerset from 1775 to 1780, supporting Lord North, and constable of Flint Castle from 1775. He died at his residence at Windsor, on 8 Sept. 1798, in his eighty-fourth year, and was buried in St. George's Chapel, Windsor, on 22 Sept.

To the 'Philosophical Transactions' of 1781 he contributed an account of a storm at Eastbourne, and to the 'Archæologia' he sent several papers: 1. 'Round Towers in Ireland,' ii. 80. 2. 'Observations in a Tour through North Wales, Shropshire, &c.,' iii. 111. 3. 'Extracts from a MS. relating to the Household of Henry VIII,' iii. 145. 4. 'Particulars of a Discovery of Gold Coins at Fenwick Castle,' v. 166. 5. 'Description of third unpublished Seal of Henrietta Maria, daughter of Henry IV of France,' v. 280. 6. 'Brereton Church Window,' ix. 368. 7. 'Silver Coin of Philip of France,' x. 465. In vols. viii. x. xi. and xii. of the same work are particulars of various objects of antiquity exhibited by him. The paper on Brereton Church contains several unaccountable inaccuracies, which have been commented upon by Mr. Ormerod in his 'History of Cheshire.'

[John Holliday in Trans. of the Society of Arts, xix. 4–8, with portrait; same article in Chalmers's Biog. Dict.; Gent. Mag. 1798, lxviii. part ii. p. 816; Ormerod's Cheshire, ed. Helsby, 1882, ii. 573; Welch's Westminster Scholars, 1788; Return of Members of Parliament, 1878, ii. 154.] C. W. S.

BRERETON, THOMAS (1691–1722), dramatist, was descended from a younger branch of the noble family of Brereton in Cheshire, his father being Major Thomas Brereton of the queen's dragoons. He was born in 1691, and after attending the free school of Chester, and a boarding school in the same city, kept by a Mr. Dennis, a French refugee, he matriculated at Brasenose College, Oxford, 16 April 1709, proceeding B.A. 14 Oct. 1712. His father died before he reached his majority, leaving him a considerable fortune, which, however, he soon dissipated, his wife and family being compelled by destitution to retire to their relations in Wales in 1721. The same year he received from the government a small office connected with the customs at Chester. In connection with the election of a relative as member of parliament for Liverpool he wrote a libellous attack on the rival candidate, and to escape prosecution was advised to abscond. To baffle pursuit he determined to cross the Saltney when the tide was coming in. In the middle of the stream he quitted his horse, resolving to trust to his remarkable powers as a swimmer, but he was unable to reach the shore. His death took place in February 1722. Brereton was the author of two tragedies, or rather English adaptations of French plays, but they were never acted and do not possess much merit. They are: 1. 'Esther, or Faith Triumphant, a sacred Tragedy in Rhyme, with a chorus after the manner of the ancient Greeks; translated with improvements from Racine,' 1715; and 2. 'Sir John Oldcastle, or Love and Zeal, a Tragedy,' 1717, founded on the 'Polyeucte' of Corneille. To 'Esther' he prefixed a 'large dedication to the Lord Archbishop of York, in defence of such compositions against the rants of Tertullian and Mr. Collier.' He also published 'A Day's Journey from the Vale of Evesham to Oxford, to which are added two Town Eclogues,' no date; 'An English Psalm . . . on the late Thanksgiving Day,' 1716; 'George, a poem, humbly inscribed to the Right Honourable the Earl of Warrington,' 1715; and 'Charnock Junior, or the Coronation, being a Parody on Mack Flecknoe, occasioned by Dr. S——l's late exploit at St. Andrews,' 1719. This had been published in 1710, badly printed and without the author's knowledge. It is a burlesque on Dr. Sacheverell's progress after his trial. He married Jane (*b.* 1685), daughter of Thomas Hughes of Bryn Griffith, Mold, Flintshire, on 29 Jan. 1711. Two daughters survived him. His wife died at Wrexham on 7 Aug. 1740. She wrote a good deal of verse in the 'Gentleman's Magazine' and elsewhere, which was collected after her death and published, together with some of her letters (1744).

[Rawlinson MSS. 4to, i. 379; Jacob's Poetical Register (ed. 1723), i. 283; Biogr. Dramatica (ed. Baker), i. 63–4; Brit. Mus. Catalogue; Mrs. Jane Brereton's Poems.] T. F. H.

BRERETON, THOMAS (1782–1832), lieutenant-colonel, was born in King's County, Ireland, on 4 May 1782. He went as a volunteer to the West Indies with his uncle, Captain Coghlan, in 1797, and received his commission as ensign in the 8th West India regiment in 1798, being promoted lieutenant 1800, and captain 1804. With the exception of a short term of service in Jersey in 1803–4, he appears to have remained in the West Indies until 1813, acting for a time as brigade-major to his relative, General Brereton, governor of St. Lucia, and being present at the capture of Martinique and Guadaloupe. In consequence of ill-health and of injuries received during a hurricane in 1813, he

returned that year to England invalided. In 1814 he was appointed lieutenant-governor of Senegal and Goree, and the next year was made lieutenant-colonel of the Royal African corps. In December 1816 he was again invalided, and returned to England. He was appointed to a command on the frontier of the Cape Colony in 1818, visited England in 1819, and commanded the Cape Town garrison until 1823. In the meanwhile he had exchanged first into the 53rd regiment, afterwards into the Royal York Rangers, and in 1821 into the 49th regiment. On his final return to England he was appointed inspecting field officer of the Bristol recruiting district. As senior officer on the spot he had command of the troops quartered in the neighbourhood of Bristol at the outbreak of the Reform riots in that city on Saturday, 29 Oct. 1831. These troops were composed of a squadron of the 14th light dragoons and a troop of the 3rd dragoon guards. About five p.m. of 29 Oct. the mayor was forced to read the Riot Act, and Brereton was called on to bring his force at once into Bristol. During the half-hour that passed before his arrival the lower part of the mansion house was sacked. Brereton appears to have been ordered by the magistrates to clear the streets. Their orders, however, did not seem to him to warrant any forcible measures, and he ordered Captain Gage to disperse the mob without drawing swords or using any violence. Brereton endeavoured to bring the people to good humour, and came in from time to time to tell the magistrates that he had been shaking hands with them, and that they were gradually dispersing. As, on the contrary, the numbers and threatening aspect of the mob increased, at eleven p.m. he ordered Gage to clear the streets by force. The soldiers were badly pelted, and Gage asked the mayor to allow them to use their carbines to dislodge those who were pelting them from a distance. Brereton, however, thought this was unnecessary, and the request was refused. A soldier belonging to a troop of the 14th, detailed to protect the council house, shot a rioter who had struck him with a stone, and this added to the rage of the mob. The streets were, however, cleared by the sabres of the dragoons, and were kept free during the remainder of the night. On Sunday the riot broke out afresh, and the sack of the mansion house was completed. The 14th were fiercely attacked, and, as they had no orders to retaliate, the men suffered severely. Brereton ordered that they should leave Queen Square, in which the mansion house stood, and that the 3rd dragoons should take their place. In obeying the order they were so pressed by the rioters that they were forced to fire on them. Brereton, however, rode down from College Green to the square, and, it is said, assured the rioters that there should be no more firing, and that the 14th should be sent out of the city. On his applying to the magistrates to allow him to remove the 14th he was told that they would not agree to his doing so. Brereton, however, ordered them to Keynsham, declaring that if they were kept in Bristol every man would be sacrificed, and the troop of the 3rd dragoons was left alone to protect the city. The mob then broke open and set fire to the bridewell, the gaol, and the Gloucester county gaol, and released the prisoners. Meanwhile, Brereton ordered Cornet Kelson to go down to the city gaol, but on Kelson asking for orders said he had none to give, that he could find no magistrates to give him the authority he needed, and that no violence was to be used. During these proceedings the soldiers were in too small force to interfere with any effect, and it is said that Brereton went to bed for some hours. By midnight the bishop's palace, the mansion house, the custom house, and a large number of other buildings were destroyed. In the course of the night the Doddington yeomanry were brought into Bristol; but some difficulty having arisen as to their billets, Brereton told their captain that they could be of no use, and that if the people were let alone they would be peaceable. Accordingly the yeomanry returned to Doddington. Early in the morning of Monday Brereton went down to Queen Square in company with Major Mackworth, and in his presence Mackworth and the 3rd dragoons charged and dispersed the crowd. Major Beckwith, of the 14th, now arrived from Gloucester, and, having brought back the division of the 14th previously sent away by Brereton, took the command of the cavalry, made repeated charges on the rioters, and restored some measure of security. On 4 Nov. the magistrates sent documents to Lord Melbourne and Lord Hill defending their own conduct during the riots, and laying much blame on Brereton, whom they accused of disregarding their orders, of forsaking his post, and of withdrawing the 14th from the city. In consequence of these charges a military commission was held to inquire into Brereton's conduct. This was followed by a court-martial on him, which was opened at Bristol on 9 Jan. 1832 by Sir Henry Fane as president. The substance of the eleven charges made against him was that he had been negligent and inactive; that he had not obeyed or supported the civil authority;

that he had improperly withdrawn the 14th; that he had refused to give Cornet Kelson the needful orders, and had neglected to take advantage of the arrival of the yeomanry. On Friday, the fifth day of the trial, the proceedings were stopped by the news of Brereton's death: he had shot himself in his bed early that morning. The verdict at the inquest was that 'he died from a pistol-wound, inflicted on himself while under a fit of temporary derangement.' His unfortunate errors seem to have been the fruit of undecided character rather than of any deliberate neglect. On 4 May 1782 he had married Olivia Ross, daughter of Hamilton Ross, formerly of the 81st regiment and then a merchant at the Cape. Mrs. Brereton died on 14 Jan. 1829, leaving two daughters, who survived their father.

[Colburn's United Service Journal, 1831, pt. iii. 433, 1832, pt. i. 257; Monthly Repository (new series), v. 840, vi. 130; Somerton's Narrative of the Bristol Riots; Court-martial on Lieutenant-colonel Brereton in Somerton's Bristol Riots Tracts; Trial of C. Pinney, late Mayor of Bristol; Gent. Mag. 1832, i. 84.] W. H.

BRERETON, Sir WILLIAM (1604–1661), parliamentary commander, son of William Brereton of Handforth, Cheshire, and Margaret, daughter and coheiress of Richard Holland of Denton, Lancashire, was baptised at the collegiate church, Manchester, in 1604. On 10 March 1626–7 he was created a baronet. In 1634–5 he travelled through a large part of Great Britain and Ireland, and crossed over into Holland and the United Provinces. He kept a 'Diary' of his travels, which was published by the Chetham Society in 1844, and affords various interesting information regarding the social condition of Scotland and England; it also manifests a serious and religious cast of thought. Brereton's natural bias towards puritanism was confirmed by his marriage to Susanna, fourth daughter of Sir George Booth of Dunham Massey, and by intercourse with his neighbours, Henry Bradshaw and Colonel Dukenfield. He was elected M.P. for his native county in 1627–8 and to the Short and Long parliaments in 1640. The name of William Brereton occurs in the parish register of Wanstead, Essex, attached to a document signed by fifty of the principal inhabitants, expressing attachment to the church of England and abhorrence of papal innovations, but there is no evidence to support the supposition of Lysons (*Environs of London*, iv. 243) that the name was that of Sir William Brereton of Handforth. According to Clarendon, he was 'most considerable for a known averseness to the government of the church' (*History*, vi. 270). On the first symptoms of the approaching civil war he put himself at the head of the movement in Cheshire. In August 1642 the houses of parliament drew up instructions to him as one of the deputy-lieutenants of the county (*Advice and Directions of both Houses of Parliament to Sir William Brereton and the rest of the Deputy-lieutenants of the County of Chester*, published at London on 19 Aug. 1642). Subsequently he was appointed commander-in-chief of the forces in Cheshire and the neighbouring counties to the south. Having entered Cheshire from London with one troop of horse and a regiment of dragoons, Brereton, after a severe conflict, completely defeated Sir Thomas Aston near Nantwich on 28 Jan. 1642–3, the accidental explosion of a piece of the royalists' cannon greatly aiding his victory. This enabled him to occupy Nantwich, which became the headquarters of the parliamentary party, while Chester was fortified by the royalists. From these places the two parties 'contended,' in the words of Clarendon, 'which should most prevail upon, that is, most subdue, the affections of the county to declare for and join them' (*History*, vi. 270). Clarendon states that the lower orders were specially devoted to Brereton, and that he obtained much advantage from their readiness to supply him with intelligence. For a considerable time it required his utmost energy to enable him to hold his own. He again inflicted a severe defeat, 13 March 1642–3, on Sir Thomas Aston, who attempted to hold Middlewich on behalf of the king, but after the royalists had been strengthened by troops from Ireland, Brereton was himself worsted at the same place. Meanwhile, in the summer of 1643, he captured successively Stafford, Wolverhampton, and Whitchurch, besides various strongholds. During his absence Nantwich, while held by Sir George Booth, was closely besieged by Lord Byron, but, with the assistance of Sir Thomas Fairfax, Brereton, on 14 Feb. 1643–4, totally routed the besieging forces, the greater part of them escaping to Chester, while large numbers surrendered. Having parted from Sir Thomas Fairfax, he proceeded towards Chester, and in August 1644 defeated at Tarvin Prince Rupert, who was marching to its relief. Following on this came the capture of the town and castle of Liverpool, and the town and castle of Shrewsbury. After their defeat at Rowton Heath in September 1645, the royalists could make no further stand in Cheshire, and Beeston Castle and Chester were closely invested. Brereton obtained a complete victory over the king's forces under Sir William Vaughan on 1 Nov. at Denbigh, and all hope of succour being cut

off, the garrison at Beeston Castle surrendered the same month, and that of Chester in February 1645-6. Immediately advancing southwards against Prince Maurice with 1,000 foot, Brereton found that the enemy had disappeared. On 6 March he captured Lichfield, and on 12 May Dudley Castle. On the 22nd of the latter month he dispersed near Stow-in-the-Wold the forces of Lord Ashley, the last important body of the royalists in arms. After the conclusion of the war he received the chief forestership of Macclesfield forest, and the seneschalship of the hundred of Macclesfield. He also obtained various grants of moneys and lands, among other properties which came into his possession being that of the archiepiscopal palace of Croydon. In an old pamphlet, 'The Mysteries of the Good Old Cause' (1663), which mentions his possession of the palace, he is described as 'a notable man at a thanksgiving dinner, having terrible long teeth and a prodigious stomach, to turn the archbishop's chapel at Croydon into a kitchen; also to swallow up that palace and lands at a morsel.' He died at Croydon on 7 April 1661. His body was removed thence to be interred in the Handforth chapel in Cheadle church, but there is a tradition that in crossing a river the coffin was swept away by a flood, and this is confirmed by the fact that there is no entry of the burial, but only of the death, in the Cheadle registers. By his first wife he had two sons and two daughters, and by his second wife two daughters. There are rude portraits of Brereton in Ricraft's 'England's Champions' and Vicars's 'England's Worthies.' In the Sutherland collection of portraits in the Bodleian Library there is an illustration of him on horseback drawn by Robert Cooper.

[Ricraft's Survey of England's Champions, 1647; Vicars's England's Worthies, 1647; Clarendon's History; Binghall's Providence Improved, written 1628-73, published at Chester in 1778, containing an account of the siege of Nantwich; Cheshire Successes, 1642; Magnalia Dei, a Relation of some of the many remarkable Passages in Cheshire before the Siege of Nampt-wich . . . and at the happy Raising of it by . . . Sir Tho. Fairfax and Sir William Brereton, &c., London, 1643; History of the Siege of Chester, 1793; Sir William Brereton's Letter sent to the Hon. William Lenthall, Esq., Speaker of the Hon. House of Commons, concerning . . . the Siege . . . of Chester, 5 March 1645; Chester's Enlargement after Three Years' Bondage, 1645; the various contemporary accounts which were published of his more remarkable victories. Dr. Gower, in Account of Cheshire Collections (p. 43), mentions the Journals of Sir Wm. Brereton in five folio volumes, written in a small hand, describing every circumstance that occurred during the four years he was general. The only document now known to be in existence, corresponding in any degree to this description, is his letter-book from April to June 1642, and from December 1644 to December 1646; Add. MSS. 11331-3. Detailed accounts of Brereton's career are contained in Archæologia, vol. xxxiii., Ormerod's Cheshire, and Earwaker's East Cheshire.] T. F. H.

BRERETON, SIR WILLIAM (1789-1864), lieutenant-general and colonel-commandant 4th brigade royal artillery, was descended from the very ancient Cheshire family of Brereton of Brereton Hall, through its Irish branch, the Breretons of Carrigslaney, co. Carlow, of whom some particulars are given by Sir F. Dwarris in 'Archæologia,' vol. xxxiii., and in Mervyn Archdall's edition of 'Lodge's Peerage of Ireland,' ii. 251. In the only biographical notice wherein his parentage is given he is described as a son of Major Robert Brereton, who fought at Culloden, and younger half-brother of Major-general Robert Brereton of New Abbey, co. Kildare (formerly of 30th and 63rd regiments), and lieutenant-governor of St. Lucia, who died in 1818. He was born in 1789, and entered the Royal Military Academy as a cadet in 1803, whence he passed out in May 1805 as a second lieutenant royal artillery. He served in the Peninsular and Waterloo campaigns from December 1809 to June 1815, including the defence of Cadiz, where he commanded the guns at Fort Matagorda, the battle of Barossa, where he was wounded, the Burgos retreat, the battles of Vittoria and the Pyrenees, the siege of San Sebastian, where he was temporarily attached to the breaching batteries, the battles of Orthez, Toulouse, Quatre Bras, and Waterloo. During the greater part of the time he was one of the subalterns of the famous troop of the royal horse artillery commanded by Major Norman Ramsay, with which he was severely wounded at Waterloo. He became a second captain in 1816, and was placed on half pay the year after. He was brought on full pay again in 1823, and, after a quarter of a century of further varied service at home and in the colonies, was sent to China, where he was second in command under General d'Aguilar in the expedition to the Bocca Tigris, and at the capture of the city of Canton in 1848. During the early part of the Crimean war, Colonel Brereton, who was then on the strength of the horse brigade at Woolwich, was present with the Black Sea fleet, as a guest on board H.M.S. Britannia, carrying the flag of his relative, Vice-admiral Sir J. D. Dundas, and directed the fire of her rockets in the attack upon the forts of Sevastopol on

17 Oct. 1854. He became major-general in December 1854, and K.C.B. in 1861. For a short period he was chief of the Irish constabulary, and in April 1864 was made colonel-commandant of the royal artillery. Brereton, promoted lieutenant-general a few days before, died in the Albany, London, on 27 July 1864, in the seventy-fourth year of his age. He wrote a brief narrative entitled 'The British Fleet in the Black Sea,' which was privately printed (1857? see *Brit. Mus. Cat.*) Selections from Paixhans' 'Constitution Militaire de France,' translated by him in 1850, appear in 'Proceedings Royal Art. Inst.,' vol. i. (1857). By his will, executed 10 April 1850, and proved 16 Aug. 1864 (personalty sworn under 25,000*l.*), he left the sum of 1,000*l.*, whereof the interest is to be applied in perpetuity to encouraging the game of cricket among the non-commissioned officers of horse and foot artillery stationed at Woolwich.

C.

BREREWOOD or **BRYERWOOD**, **EDWARD** (1565?–1613), antiquary and mathematician, son of Robert Brerewood, a wetglover, who had thrice been mayor of Chester, was born and educated in that city. In 1581 he was sent to Brasenose College, Oxford, where he had the character of a very hard student. He graduated B.A. 15 Feb. 1586–7, M.A. 9 July 1590, and 'being candidate for a fellowship, he lost it without loss of credit, for where preferment goes more by favour than merit, the rejected have more honour than the elected' (Fuller, *Worthies*, ed. 1662, Cheshire, 190). Then he migrated to St. Mary Hall, and on 26 Sept. 1592, when Queen Elizabeth was at Oxford, he replied at a disputation in natural philosophy. In March 1596 he was chosen the first professor of astronomy in Gresham College, London, where, as at Oxford, 'he led a retired and private course of life, delighting with profound speculations, and the diligent searching out of hidden verities.' Brerewood, who was a member of the Old Society of Antiquaries, died on 4 Nov. 1613, and was buried in the church of Great St. Helen. His large and valuable library he bequeathed with his other effects to his nephew Robert [q. v.] (afterwards knight and a justice of the common pleas), a son of his elder brother, John Brerewood.

His works are: 1. 'De ponderibus et pretiis veterum nummorum, eorumque cum recentioribus collatione,' London, 1614, 4to. This was first published by his nephew, and afterwards inserted in the 'Apparatus' of the 'Biblia Polyglotta,' by Brian Walton, and also in the 'Critici Sacri,' vol. viii. 2. 'Enquiries touching the Diversities of Languages and Religions through the chief parts of the world,' London, 1614, 1622, 1635, 4to, 1647, &c. 8vo. This was likewise published by his nephew, and afterwards translated into French by J. de la Montagne, Paris, 1640, 8vo, and into Latin by John Johnston. Father Richard Simon made some remarks on Brerewood's work, under the pseudonym of le Sieur de Moni, in a treatise entitled 'Histoire critique de la créance et des coûtumes des nations du Levant,' Frankfort (really printed at Amsterdam), 1684. In 1693 it was reprinted, and again since that date with the following alterations in the title:—'Histoire critique des dogmes, des controverses, des coûtumes, et des ceremonies des Chretiens orientaux.' 3. 'Elementa Logicæ, in gratiam studiosæ juventutis in academia Oxoniensi,' London, 1614, 1615, &c. 8vo. 4. 'Tractatus quidam logici de prædicabilibus, et prædicamentis,' Oxford, 1628, 1637, &c. 8vo. This book was first published by Thomas Sixesmith, M.A., fellow of Brasenose College, Oxford. A manuscript of it is preserved in Queen's College library in that university. The work is sometimes quoted as 'Brerewood de moribus.' 5. 'Tractatus duo: quorum primus est de meteoris, secundus de oculo,' Oxford, 1631, 1638, 8vo. These two tracts were also published by Sixesmith. 6. 'A Treatise of the Sabbath,' Oxford, 1630, 1631, 4to. This book was written as a letter to Nicholas Byfield [q. v.], preacher at Chester, having been occasioned by a sermon of his relating to the morality of the Sabbath. It is dated from Gresham House 15 July 1611. The original manuscript is in the British Museum (Addit. MS. 21207). Richard Byfield [q. v.], Nicholas's brother, wrote a reply to it. 7. 'Mr. Byfield's Answer, with Mr. Brerewood's Reply,' Oxford, 1631, 4to. These were both printed together, with the second edition of the former. 8. 'A second Treatise of the Sabbath, or an Explication of the Fourth Commandment,' Oxford, 1632, 4to. 9. 'Commentarii in Ethica Aristotelis,' Oxford, 1640, 4to. These commentaries relate only to the first four books, and were published by Sixesmith. The original manuscript, which was finished 27 Oct. 1586, is in the library of Queen's College, Oxford. It is written, says Wood, 'in the smallest and neatest character that mine eyes ever yet beheld.' 10. 'A Declaration of the Patriarchal Government of the antient

Church,' Oxford, 1641, 4to, London, 1647, Bremen, 1701, 8vo. The Oxford edition is subjoined to a treatise called 'The original of Bishops and Metropolitans, briefly laid down by Archbishop Ussher,' &c.

[Wood's Athenæ Oxon. (Bliss), ii. 139, Fasti, i. 236, 251; Ward's Gresham Professors, 74, 336, with the author's manuscript notes; Archæologia, i. p. xix; Gent. Mag. lxi. (ii.) 714.] T. C.

BREREWOOD, SIR ROBERT (1588-1654), judge, belonged to a family of respectable citizens of Chester, who had held municipal office. His grandfather, Robert, is called a wet-glover by trade, and was once sheriff, in 1566, and thrice mayor, in 1584, 1587, and 1600, in which last year he died in office. His father, John, the eldest son of Robert the elder, was sheriff of Chester, and his uncle Edward [q. v.] was a scholar of eminence, the first Gresham professor of astronomy. Two of Edward Brerewood's treatises were published by his nephew in 1614, on the author's death. Robert Brerewood was born in Chester in 1588. In 1605, at the age of seventeen, he was sent to Oxford, and matriculated at Brasenose College, and two years later was admitted a member of the Middle Temple. Probably he was his uncle's heir, for in dedicating one of Edward Brerewood's posthumous works to the archbishop of Canterbury, he says of him, 'Succeeding him in his temporall blessings I doe endevour to succede him in his virtues.' He was called to the bar on 13 Nov. 1615, and continued to practise for two-and-twenty years. He also turned his attention to literature, and published some of the works of his uncle Edward. In 1637 he was appointed a judge of North Wales, probably through the local influence of his family, as he had constantly maintained his connection with Cheshire, and in 1639 he was elected recorder of his native town. He had been appointed reader at the Middle Temple in Lent term 1638, and in 1640 became serjeant-at-law. He was M.P. for Chester in the Short parliament. In Hilary term 1641 he was king's serjeant, was knighted in 1643, and raised to the bench on 31 Jan. 1644. The king being then at Oxford, he was sworn in there. Though he continued to sit until the end of the civil war, he never sat in Westminster Hall, and after the execution of Charles I he retired into private life. He died on 8 Sept. 1654, and was buried in St. Mary's Church, Chester. He was twice married: first to Anna, daughter of Sir Randle Mainwaring of Over Peover, Cheshire, and second to Katherine, daughter of Sir Richard Lea of Lea and Dernhall, Cheshire, and had several children by each of his wives.

[Foss's Lives of the Judges; Dugdale's Orig. 220; Wood's Athenæ (Bliss), ii. 139-40; Gent. Mag. lxi. 714; Books of the Middle Temple; The Vale Royal of England (Smith and Webb), p. 85; Ormerod's Cheshire, i. 181, 182; Archæologia (Soc. Antiquaries), i. xx *n.*] J. A. H.

BRERewood, THOMAS (*d.* 1748), poetical writer, was son of Thomas Brerewood of Horton, Cheshire, and grandson of Sir Robert Brerewood [q. v.], justice of the court of common pleas. He led the life of a country gentleman at Horton, and died in 1748. Some pieces of poetry by him were printed in the earlier numbers of the 'Gentleman's Magazine;' after his death there appeared a work by him in rhymed verse of little merit (with a eulogistic preface by an anonymous editor), entitled 'Galfred and Juetta, or the Road of Nature, a Tale in three cantos,' London, 1772, 4to, pp. 56.

[Gent. Mag. vii. 760, xiv. 46, xvi. 157, 265, xxiv. 428, lxi. 714; Universal Catalogue for 1772, art. 78; Lipscomb's Buckinghamshire, iv. 511.] T. C.

BRETLAND, JOSEPH (1742-1819), dissenting minister, son of Joseph Bretland, an Exeter tradesman, was born at Exeter 22 May 1742. He was for several years a day scholar at the Exeter grammar school, and was placed in business in 1757, but shortly after left it for the ministry. For this work he received a special education, his course of study being finished in 1766. From 1770 to 1772 he was minister of the Mint Chapel, and from the latter year until 1790 kept a classical school at Exeter. He resumed his duties at the Mint Chapel in 1789, and continued there until 1793. For three years, 1794-7, he acted as minister at the George's meeting-house in Exeter, and on the establishment in 1799 of an academy in the West of England for educating ministers among the protestant dissenters, he was appointed one of its tutors. This position he retained down to its dissolution in 1805, and he then retired into private life. In 1795 Bretland married Miss Sarah Moffatt. He died at Exeter 8 July 1819. He is described as a believer in the unity of the Deity and in the simple humanity of Jesus Christ, and he is styled a scholar of 'extensive and solid learning.' Many of his theological papers are in Dr. Priestley's 'Theological Repository' and in the 'Monthly Repository.' He composed several sermons and many prayers for the use of unitarians, including a 'Liturgy for the Use of the Mint Meeting in Exeter,' 1792. After his death there were printed at Exeter two volumes of 'Sermons by the late Rev. Joseph Bretland, to which are prefixed Memoirs of

his Life, by Wm. Benjamin Kennaway, 1820.' He was much attached to Dr. Priestley, and edited a new edition of his 'Rudiments of English Grammar;' many of his letters to the doctor are printed in J. T. Rutt's memoirs of Priestley.

[Life by Kennaway; Rutt's Priestley, passim; Monthly Repository, 1819, pp. 445, 473, 494, 559.] W. P. C.

BRETNOR, THOMAS (*fl.* 1607–1618), almanac maker, calls himself on the title-page of one of his almanacs 'student in astronomie and physicke,' and on that of another, 'professor of the mathematicks and student in physicke in Cow Lane, London.' His extant works are as follows: 1. 'A Prognostication for this Present Yeere . . . M.DC.VII. . . . Imprinted at London for the Companie of Stationers' (a copy is in the British Museum). 'Necessary observations in Phlebotomie' and 'Advertisements in Husbandrie' are introduced into the work. 2. 'A Newe Almanacke and Prognostication for . . . 1615' (copies are in the Huth Library and the Bodleian). 3. 'Opiologia, or a Treatise concerning the nature, properties, true preparation, and safe vse and administration of Opium. By Angelus Sala Vincentines Venatis, and done into English and something enlarged by Tho. Bretnor, M.M.,' London, 1618. This translation, which is made from the French, is dedicated 'to the learned and my worthily respected friends D. Bonham and Maister Nicholas Carter, physitians.' In an address to the reader Bretnor defends the use of laudanum in medicine, promises to prepare for his readers 'the chiefest physicke I vse my selfe,' and mentions his friends 'Herbert Whitfield in Newgate Market,' and 'Maister Bromhall,' as good druggists. Bretnor was a notorious character in London, and is noticed by Ben Jonson in his 'Devil is an Ass' (1616), i. 2, and by Thomas Middleton in his 'Fair Quarrel' (1617), vi.

[Nares's Glossary (ed. Halliwell), s.v. 'Bretnor;' Brit. Mus. Cat.; Middleton's Works (ed. A. H. Bullen), iv. 263.] S. L.

BRETON, JOHN LE (*d.* 1275), bishop of Hereford, was chosen bishop about Christmas 1268, being then a canon of Hereford, and was consecrated 2 June 1269. For about two years before this he was a justice of the king's court. He died 12 May 1275. Some fifty years after his death, perhaps sooner, the belief was current that he wrote the book now known to lawyers as 'Britton.' That book (first printed without date about 1540, reprinted in 1640, and carefully edited by F. M. Nichols in 1865) is in the main Bracton's treatise on English law condensed, rearranged on a new plan, purged of speculative jurisprudence, turned from Latin into French, and put into the mouth of Edward I, so that the whole law appears as the king's command. Seemingly, it is an unfinished work, but it became very popular, and was often copied in manuscript. Frequent reference is made in it to statutes passed after the bishop's death, and from the internal evidence we must suppose it written shortly after 1290. Possibly we have but the bishop's book as altered by a later hand, or possibly, as Selden suggested, there has been some confusion between the bishop and the contemporary judge whom we call Bracton [q. v.], but whose name seems really to have been Bratton. The book 'Britton' might fairly be called a Bracton for practising lawyers, and in fourteenth-century manuscripts the two books are indiscriminately called Bretoun, Brettoune, and the like.

[For election, consecration, and death, see the following Chronicles under years 1268–9, 1275: Gervase of Canterbury (ed. Stubbs); Annals of Winchester, Waverley, Osney, Wykes, and Worcester (all in Annales Monastici, ed. Luard, who, vol. ii. p. xxxvii, discusses date of consecration); Le Neve's Fasti Ecclesiæ Anglicanæ, ed. Hardy, i. 459–60. For judicial employment: Excerpta e Rotulis Finium (Record Commission), ii. 444–82; Liber de Antiquis Legibus (Camden Society), year 1267. Judge and bishop same man: Ann. Osney, year 1268. The statement that he wrote a law book is in the following, under year 1275: F. Nicolai Triveti Annales (ed. Hog.); Chronicle of Rishanger (ed. Riley); Flores Historiarum Matth. Westm. (ed. 1570, but it is not in the first edition, nor in many manuscripts—see Hardy, Catalogue of Materials for British History, iii. 209). The authorship of Britton is discussed by Selden, Notes to Hengham, ed. 1616, pp. 129–31 and Dissertation suffixed to Fleta, pp. 458–9, also in F. M. Nichols's preface to edition (1865) of Britton; Foss's Judges of England.] F. W. M.

BRETON, NICHOLAS (1545?–1626?), poet, was descended from an ancient family originally settled at Layer-Breton, Essex. His grandfather, William Breton of Colchester, died in 1499, and was buried there in the monastery of St. John. His father, also William Breton, was a younger son, came to London and amassed a fortune in trade. His 'capitall mansion house' was in Red Cross Street, in the parish of St. Giles Without Cripplegate, and he owned tenements in other parts of London, besides land in Essex and Lincolnshire. His wife was Elizabeth, daughter of John Bacon, and by her he had two sons,

Richard and Nicholas, and three daughters, Thamar, Anne, and Mary. He died 12 Jan. 1558–9, while his sons were still boys, and left by will to Nicholas the manor of Burgh-in-the-Marsh, near Wainfleet, Lincolnshire, forty pounds in money, 'one salt, all gilte, w^t^ a cover . . . vj silver spones, and the gilte bedsted and bedd that I lye in at London,' with all its furniture (will printed in Dr. Grosart's pref. to BRETON'S *Works*, pp. xii–xvii). This property was to be applied by the child's mother to his 'mayntenaunce and fynding' until he was twenty-four years old, when he was to enter into full possession. William Breton left much to his wife on the condition that she should remain unmarried, but before 1568 she had become the wife of George Gascoigne, the poet, who died 7 Oct. 1577, and was thus for more than nine years Nicholas Breton's stepfather.

From the fact that Breton was a boy in 1559, the year of his father's death, the date of his birth may be conjecturally placed in 1545, but no sure information is at present accessible. From his 'Floorish vpon Fancie' we know that in 1577 Breton was settled in London and had lodgings in Holborn. The Rev. Richard Madox, chaplain to a naval expedition in 1582, whose unpublished diary is in Sloane MS. 1008, records under date 14 March 1582[–3] that while on the continent, apparently at Antwerp, he met 'Mr. Brytten, once of Oriel Colledge, wch made wyts will [i.e. the prose tract, 'The Wil of Wit, Wit's Will, or Wil's Wit,' entered on the Stationers' Register 7 Sept. 1580]. He speaketh the Italian well.' No university document supports the statement that Breton was educated at Oriel College, but in 'The Toyes of an Idle Head,' the appendix to his first published book, 'A Floorish vpon Fancie,' he refers to himself as 'a yong gentleman who . . . had spent some years at Oxford.' He also dedicates the 'Pilgrimage to Paradise' (1592) 'to the gentlemen studients and scholers of Oxforde.' On 14 Jan. 1592–3 he married Ann Sutton at St. Giles's Church, Cripplegate, the church of the parish in which stood his father's 'capitall mansion house.' On 14 May 1603, according to the St. Giles's parish register, a son Nicholas was born; on 16 March 1605–6 another son, Edward; and on 7 May 1607 a daughter, Matilda. In the burial register of the same church are recorded the deaths of Mary, daughter of 'Nicholas Brittaine, gent.,' on 2 Oct. 1603, and of Matilda, daughter of 'Nicholas Brittaine, gent.,' on 27 July 1625. But of Breton's own death no record has yet been found. His last published work bears the date 1626. The Captain Nicholas Breton, son of John Breton of Tamworth, who served under Leicester in the Low Countries in 1586, purchased an estate at Norton, Northamptonshire, and died there in 1624, has often been erroneously identified with the poet (SHAW, *Staffordshire*, i. 422; BRIDGES, *Northamptonshire*, i. 78; PHILLIPPS, *Theatrum Poetarum*, 1800, p. 321).

These scanty facts are all that is known of the poet's life. His voluminous works in prose and verse were issued in rapid succession between 1577 and 1626. Among his early patrons, the chief was Mary, countess of Pembroke; he dedicated to her the 'Pilgrimage to Paradise,' 1592, to which is added the 'Countesse of Pembrooke's Love,' where he speaks of himself as 'Your Ladishipp's unworthy named Poet.' He also wrote for her his 'Auspicante Jehoua,' 1597, and the Countess of Pembroke's 'Passion.' Passages in 'Wit's Trenchmour' (1597) refer to the rejection of the poet's love-suit by a lady of high station, and it seems not improbable that Breton's intimacy with the Countess of Pembroke passed beyond the bounds of patron and poet. Whatever the character of the relationship, it ceased after 1601.

As a literary man Breton impresses us most by his versatility and his habitual refinement. He is a satirical, religious, romance, and pastoral writer in both prose and verse. But he wrote with exceptional facility, and as a consequence he wrote too much. His fertile fancy often led him into fantastic puerilities. It is in his pastoral lyrics that he is seen at his best. The pathos here is always sincere; the gaiety never falls into grossness, the melody is fresh and the style clear. His finest lyrics are in 'England's Helicon' and the collection of poems published by himself under the title of the 'Passionate Shepheard.' 'Wit's Trenchmour,' an angling idyll, is the best of his prose tracts, and had the author not yielded to the temptation of digressing from his subject in the latter half of the book, he might have equalled Izaak Walton on his own ground. Throughout his works runs a thorough sympathy with country life and rural scenery; the picturesque descriptions of country customs in his 'Fantasticks' and the 'Town and Country' are of value to the social historian. Breton's satire, most of which appeared under the pseudonym of Pasquil, is not very impressive; he attacks the dishonest practices and artificiality of town society, but writes, as a rule, like a disappointed man. Of the coarseness of contemporary satirists he knows nothing. He lacks the drastic power of Nash, who wrote under the same

pseudonym, and his refinement brought down on him Nash's censure. Nash speaks of Breton, in allusion to his 'Bower of Delights,' as 'Pan sitting in his Bower of Delights, and a number of Midases to admire his miserable hornpipes.' In his religious poems and tracts there is a passionate yearning and rich imagery which often suggest Southwell, or even Crashaw, but they are defaced by wire-drawn conceits and mystical subtleties. He was probably an earnest student of Spenser, for whom he wrote a sympathetic epitaph.

The enthusiasm for the Virgin Mary exhibited in a few poems, very generally attributed to Breton, has led to the belief that the poet was an ardent catholic. But it is almost certain—as we state below—that the undoubtedly catholic poems ascribed to Breton were by another hand; his long intimacy with the protestant Countess of Pembroke, which probably rested mainly on common religious sentiments, the direct attacks on Romanism which figure in many of Breton's prose tracts, and his sympathetic references to the practices of the English reformed church, point in quite the opposite direction. His description of the Virgin, saints, and angels, only noticed by him as part of the acknowledged host of heaven, and his constantly recurring comparison of his own spiritual condition to that of Mary Magdalen, merely illustrate the strength of his religious fervour (see Dr. BRINSLEY NICHOLSON'S notes in *Notes and Queries*, 5th series, i. 501–2).

Breton's popularity lasted through the first half of the seventeenth century. A highly eulogistic sonnet 'in authorem' is prefixed by Ben Jonson to Breton's 'Melancolike Humours,' 1600, and Francis Meres in his 'Palladis Tamia,' 1598, classes him with the greatest writers of the time. Sir John Suckling, in 'The Goblins,' iv. i. (DODSLEY, *Old Plays*, 1826, x. 143), joined his name with that of Shakespeare:—

> The last a well-writ piece, I assure you,
> A Breton I take it, and Shakespeare's very way.

Less respectful reference to the poet's voluminousness is made in Beaumont and Fletcher's 'Scornful Lady' (ii. 3), and 'Wit without Money' (iii. 4). At a later date, Richard Brome, in his 'Jovial Crew' (*Works*, iii. 372), speaks of 'fetching sweetmeats' for ladies and courting them 'in a set speech taken out of old Britain's works.' At the end of the seventeenth century Breton seems to have completely dropped out of notice, but his reputation was restored by Bishop Percy, who printed his 'Phillida and Corydon' and 'The Shepherd's Address to his Muse' (both from 'England's Helicon') in his 'Reliques of Ancient Poetry.' In most of the subsequent poetical collections Breton has been represented.

I. Breton's POETICAL productions, all bibliographical rarities, are as follows:—

1. 'The Workes of a young Wit trust up with a Fardell of prettie fancies, profitable to young Poetes, prejudicial to no man, and pleasant to every man to passe away idle time withall. Whereunto is joined an odde kinde of wooing with a bouquet of comfittes to make an end withall. Done by N. B., Gent.,' 1577. Only one copy of this work (entered on the Stationers' Register under date June 1577) is now extant; it belongs to Mr. Christie-Miller of Britwell. George Ellis printed two poems from it in his 'Specimens of Early English Poets' (3rd edition, 1803), ii. 270–8; and Mr. W. C. Hazlitt has reprinted 'The Letter Dedicatorie to the Reader' (dated 14 May 1577) in his 'Prefaces &c. from Early Books,' 1874. 2. 'A Floorish vpon Fancie. As gallant a glose vpon so trifling a text as ever was written. Compiled by N. B., Gent. To which are annexed The Toyes of an Idle Head; containing many pretie Pamphlets for pleasaunt heads to passe away Idle time withall. By the same Authour,' London, 'imprinted by Richard Jhones,' 1577 and 1582. This work was entered on the Stationers' Register 2 April 1577; the only extant copy of the edition published in 1577 is now at Britwell; that of 1582 is carelessly reprinted in Park's 'Heliconia' (cf. W. C. HAZLITT'S *Prefaces, &c.* (1874), p. 55). 3*. 'The Pilgrimage to Paradise, coyned with the Countesse of Penbrooke's love, compiled in verse by Nicholas Breton, Gentleman,' Oxford, by Joseph Barnes, 1592, entered on the Stationers' Register 23 Jan. 1590–1, with the dedication to Mary, countess of Pembroke. John Case, M.D., prefixes a letter, addressed in high praise of the author, 'to my honest trve friend, Master Nicholas Breton,' and William Gager, doctor of laws, and Henry Price add Latin verses (cf. *Addit. MS.* 22583, f. 86). 4. 'The Countess of Penbrook's Passion,' first privately printed by Mr. Halliwell-Phillipps, from a manuscript preserved in the Public Library at Plymouth in his 'Brief Description of the Plymouth Manuscripts' (1853), pp. 177–210. An anonymous writer in 'Notes and Queries' (1st series, v. 487) described another manuscript of this poem in his possession. A manuscript older than either of these is in the British Museum (Sloane MS. 1303), and this was printed for the first time in 1862, under the title of 'A Poem on our Saviour's Passion,' as the work of

Mary Sidney, countess of Pembroke. Horace Walpole, in his 'Royal and Noble Authors,' similarly attributed the poem to the Countess of Pembroke, but George Steevens, to whom the Plymouth manuscript at one time probably belonged, describes it as Breton's work (STEEVENS'S *Sale Catalogue*, 997); its identity of style with the 'Countesse of Pembrooke's Love,' mentioned above, removes almost all doubt as to its authorship. Dr. Brinsley Nicholson discussed the question in the 'Athenæum' (9 March 1878), and, while arriving at this conclusion, pointed out that the author was somewhat indebted to Thomas Watson's 'Tears of Fancie.' The title may be compared with 'The Countess of Pembroke's Arcadia,' by Sidney, 'The Countess of Pembroke's Emanuel' (1591), and 'The Countess of Pembroke's Yuy Church' (1591–2), by Abraham Fraunce. 5*. 'Pasquil's Mad-cappe, Throwne at the Corruptions of these Times, with his Message to Men of all Estates,' 1626. It was entered on the Stationers' Register 20 March 1599–1600, and again on 29 July 1605, but no earlier copy than that of 1626 is extant. 6. 'Pasquil's Fooles-cap sent to svch (to keepe their weake braines warme) as are not able to conceive aright of his Mad-cap. With Pasquil's Passion for the World's waywardnesse, begun by himselfe and finished by his friend Morpherius,' 1600 (entered on Stationers' Register 10 May 1600). The only copy known is in the Bodleian. The dedication, addressed 'to my very good friende, Master Edward Conquest,' is signed 'N. B.' 7. 'Pasquil's Mistresse, or the Worthie and Vnworthie Woman; with his Description and Passion of that Furie, Jealousie,' 1600. The dedicatory epistle is signed 'Salohcin Treboun,' apparently an anagram upon Nicholas Breton. A unique copy is at Britwell. 8*. 'Pasquil's Passe and Passeth Not, set downe in three pees, his Passe, Precession, and Prognostication,' London, 1600 (entered on Stationers' Register 29 May 1600). The dedication, signed 'N. B.,' is addressed 'to my . . . good friend M. Griffith Pen.' 9. 'Melancholike Humours, in verses of Diverse Natures set downe by Nich. Breton, Gent.,' London, 1600. This was reprinted privately at the Lee Priory Press by Sir S. Egerton Brydges. It is dedicated to 'Master Thomas Blunt,' and 'Ben. Iohnson' prefixes a sonnet 'in authorem.' Copies are in the Huth Library and the Bodleian. 10. 'Marie Magdalen's Love: a Solemne Passion of the Sovles Love, by Nicholas Breton,' London, by John Danter, 1595. The first part is a prose commentary on St. John x. 1–18. The second is a poem in six-line stanzas, and was republished separately in 1598 and *1623. It was entered on the Stationers' Register 20 Sept. 1595. It is almost certain that 'Marie Magdalen's Love,' a catholic treatise, was by another hand, and bound up by the publisher—who leaned towards catholicism himself—with Breton's undoubted work, to secure a sale for it. 11*. 'A Diuine Poeme diuided into two partes: The Ravisht Soule and the Blessed Weeper. Compiled by Nicholas Breton, Gentleman,' London, 1601, dedicated to the Countess of Pembroke. A copy is in the Huth Library. It was reprinted in 'Excerpta Tudoriana.' 12*. 'An Excellent Poeme, vpon the Longing of a Blessed Heart, which, loathing the world, doth long to be with Christ; with an addition vpon the definition of love. Compiled by Nicholas Breton, Gentleman,' London, 1601. It was privately reprinted by Sir Egerton Brydges in 1814. The dedication is addressed to Lord North, and 'H. T., Gent.,' contributes a sonnet in praise of the author. A copy is in the Huth Library. 13. 'The Soules Heavenly Exercise, set down in diverse godly meditations, both prose and verse, by Nicholas Breton, Gent.,' London, 1601, dedicated to William Rider, lord mayor of London. This little quarto is not mentioned by any of the bibliographers or writers on Breton. A copy which is believed to be unique is in private hands; it is bound in old vellum, with Queen Elizabeth's crest stamped upon it in gold. 14*. 'The Soules Harmony. Written by Nicholas Breton,' London, 1602. Dedicated to Lady Sara Hastings. 15. 'Olde Madcapps newe Gallymawfrey, by Ni. Breton,' London (Richard Iohnes), 1602, and dedicated to Mistress Anne Breton of Little Calthorpe, Leicestershire, entered on the Stationers' Register 4 June 1602. A unique copy is in Mr. Christie-Miller's library at Britwell. 16. 'The Mother's Blessing,' London, 1602, with a dedication signed Nich. Breton, addressed to 'M. Thomas Rowe, sonne to the Lady Bartley of Stoke.' The only complete copy known is in the library of Sir Charles Isham of Lamport Hall, Northampton. 17. 'The Passionate Shepheard, or the Shepheardes Love; set downe in Passions to his Shepherdesse Aglaia,' London, 1604. Breton here writes under the pseudonym of Bonerto. The only perfect copy known belonged to Mr. Frederic Ouvry, and was reprinted by him in 1877. 18*. 'The Soules Immortall Crowne, consisting of Seaven Glorious Graces,' London, 1605, dedicated to James I. A manuscript of the work, signed by Breton, is in the British Museum (MS. Royal, 18 A, lvii.) 19. 'A Trve Description of Vnthankfulnesse, or an Enemie to Ingratitude. Compiled by Nicholas Breton,

Gent.,' London, 1602; dedicated to 'Mistris Mary Gate,' daughter of Sir Henry Gate of Seamer, Yorkshire. A copy is in the Bodleian. 20. 'The Honovr of Valovr. By Nicholas Breton, Gent.,' London, 1605. A unique copy is in the Huth Library; it is dedicated to Charles Blount, earl of Devon. 21. 'An Invective against Treason,' printed by Dr. Grosart from the Royal MS. (17 C, xxxiv.) in the British Museum, with a dedication, signed 'Nich. Breton,' to the Duke of Lennox. An edition entitled 'The State of Treason with a Touch of the late Treason,' was published in 1616, but no copy is now known. The poem refers to the Gunpowder Plot. 22. 'I would and I would not,' London, 1614. The address to the reader is signed 'B. N.,' but the style of the poem and the initials (probably reversed) give the poem a title to be connected with Breton's name.

Breton was a regular contributor to the poetical collections of his age, and his poetical fame induced an enterprising publisher, Richard Jones, to put forth two miscellanies under his name. In the Stationers' Register, under date 3 May 1591, 'Bryton's Bowre of Delights' was entered to Jones, and published in the same year as 'contayning many most delectable and fine deuices of rare epitaphes, pleasant poems, pastorals, and sonets, by N. B., Gent.' Of this publication Mr. Christie-Miller owns a unique copy. Breton says in an epistle (12 April 1592) prefixed to his 'Pilgrimage to Paradise:' 'There hath beene of late printed in London by one Richarde Joanes, a printer, a booke of English verse, entituled "Breton's Bower of Delights." I protest it was done altogether without my consent or knowledge, and many things of other men mingled with a few of mine, for except "Amoris Lachrimæ," an epitaph vpon Sir Phillip Sydney, and one or two other toies, which I know not how he vnhappily came by, I have no part of any of them.' George Ellis printed in his 'Specimens of the Early English Poets,' 3rd edition, 1803 (ii. 286–8), 'a sweet contention between love, his mistress, and beauty' from a copy of 'The Bowre of Delights,' dated 1597. A similar story may be told of 'The Arbor of Amorous Deuices: Wherein young Gentlemen may reade many pleasant fancies and fine Deuices: And thereon meditate diuers sweete Conceites to court the loue of faire Ladies and Gentlewomen. By N. B., Gent.,' London, 1597 (cf. Beauclerc's *Sale Catalogue*, 1781; W. C. Hazlitt's *Handbook*). Only one copy of this book is still extant, and that has lost its title-page and is otherwise defective; it is in the Capell collection at Trinity College, Cambridge. There is an entry on the Stationers' Register of 'The Arbour of Amorus Delightes, by N. B., Gent.,' under date 7 Jan. 1593–4. This book is only in part Breton's; it contains poems by other hands, collected together by the printer, Richard Jones. Two pieces are from Tottel's 'Miscellany,' a third is from Sidney's 'Arcadia.' The most beautiful poem in the collection is the well-known 'A Sweete Lullabie,' beginning, 'Come little babe, come silly soule,' and it has been assumed by many to be by Breton, but 'Britton's Divinitie' is Breton's sole undoubted contribution to the volume. In the 'Phœnix Nest,' published in 1593, five poems are described as 'by N. B., Gent.' In 'England's Helicon,' published in 1600, eight poems are signed 'N. Breton,' among them being the far-famed 'Phillida and Corydon' (originally printed anonymously in 1591 in 'The . . . Entertainment gieven to the Queen . . . by the Earle of Hertford'), and several of Breton's most delicate pastorals. Some songs set to music in Morley's 'New Book of Tablature,' 1596, and Dowland's 'Third Book of Songs,' 1603 (see Collier's *Lyrical Poems*, published by Percy Society), have on internal grounds been ascribed to Breton. Sir Egerton Brydges printed in his 'Censura Literaria' as a poem of Breton's a few verses beginning 'Among the groves, the woods, the thickets,' described in John Hynd's 'Eliosto Libidinoso,' 1606, as 'a fancie which that learned author, N. B., hath dignified with respect.' Part of the poem was printed anonymously from Brit. Mus. MS. Harl. 6910, in 'Excerpta Tudoriana.' To 'The Scvller,' 1612, by John Taylor, the Water Poet, 'thy loving friend Nicholas Breton' contributed a poem 'in laudem authoris.' A seventeenth-century manuscript collection of verse by various authors of the sixteenth and the seventeenth centuries (in the possession of Mr. F. W. Cosens) contains transcripts of many of Breton's poems, some of which were printed in 'England's Helicon,' others in 'The Arbor of Amorous Devices,' 1597; and one, 'Amoris Lachrimæ for the Death of Sir Philip Sidney,' in 'Britton's Bowre of Delights,' 1591; there are also some thirty short pieces, fairly attributable to Breton, which do not appear to have been printed in the poet's lifetime; they were published for the first time by Dr. Grosart. Among the Tanner MSS. at the Bodleian are five short poems by Breton of no particular literary interest.

II. Breton's Prose works are:—

1*. 'Auspicante Jehoua, Marie's Exercise,' London (by T. Este), 1597. There is a dedication, signed 'Nich. Breton,' addressed to Mary, countess of Pembroke, and another 'to the Ladies and Gentlewomen Readers.' One copy is in the Cambridge University

Library. 2. 'Wits Trenchmour, in a conference betwixt a Scholler and an Angler. Written by Nich. Breton, Gentleman,' London, 1597 (*Trenchmour* is the name of a boisterous dance). A unique copy is in Mr. Huth's library. The dedication is addressed to 'William Harbert of the Red Castle in Montgomery-shire.' Izaak Walton is usually said, without much reason, to have been indebted to this work for the suggestion of his 'Angler.' 3**. 'The Wil of Wit, Wit's Will or Wil's Wit, Chuse you whether. Compiled by Nicholas Breton, Gentleman,' London (by Thomas Creede), 1599. The book is entered on the Stationers' Register 7 Sept. 1580. The Rev. Richard Madox refers to the book as its author's chief work in his 'Diary,' under date 14 March 1582–3. There is a dedication 'To Gentlemen Schollers and Students, whatsoever,' and two copies of unsigned verses, 'ad lectorem, de authore,' together with some stanzas by W[illiam] S[mith]. The book contains: (1) 'A Pretie and Wittie Discourse betwixt Wit and Will, in which several songs appear.' (2) 'The Author's Dreame of strange effects as followeth.' (3) 'The Scholler and the Soldiour . . . the one defending Learning, the other Martiall Discipline, in which the Soldier gets the better of the argument.' (4) 'The Miseries of Manillia, the most unfortunate Ladie that ever lived,' a romance. (5) 'The Praise of Vertuous Ladies, an invective written against the discourteous discourses of certaine malicious persons, written against women whom Nature, Wit, and Wisedom (well considered) would us rather honour than disgrace.' This piece was reprinted by Sir Egerton Brydges in 1815. (6) 'A Dialogue betweene Anger and Patience.' (7) 'A Phisitions Letter,' with practical directions for healthy living. (8) 'A Farewell.' The whole work was republished in 1606*, and a very limited reprint was issued by Mr. J. O. Halliwell-Phillipps in 1860. 4. 'The Strange Fvtvres of Two Excellent Princes [Fantiro and Penillo], in their Lives and Loves to their equall Ladies in all the titles of true honour,' 1600, a story from the Italian. A unique copy is in the Bodleian, dedicated to 'Iohn Linewray, Esquire, clerk of the deliueries, and the deliuerance of all her Maiestie's ordenance.' 5. 'Crossing of Proverbs, Crosse Answeres and Crosse Humours, by N. B., Gent.,' London, 1616, pts. i. and *ii. 6. 'The Figvre of Foure' was first entered on the Stationers' Register 10 Oct. 1597, and again 19 Nov. 1607. Ames notes an edition of 1631. But all that seems to have survived of this book is an edition of 'the second part,' issued in 1636 (of which a unique copy is in the Bodleian). The address to the reader is signed 'N. B.' *A reprint of this part, dated 1654, consists of 104 fantastic paragraphs, each describing four things of similar quality. 7**. 'Wonders Worth the Hearing, which being read or heard in a Winter's evening by a good fire, or a Summer's morning in the greene fields, may serve both to purge melancholy from the minde & grosse humours from the body,' London, 1602. The dedication, signed 'Nich. Breton,' and dated 22 Dec. 1602, is addressed 'to my honest and loving friend, Mr. Iohn Cradocke, cutler, at his house without Temple Barre.' The book contains quaint descriptions of Elizabethan manners. 8. 'A Poste with a Packet of Mad Letters,' was published first in 1603 (entered on Stationers' Register 18 May 1602), of which a copy is in the Advocates' Library, Edinburgh. *An edition, 'the fourth time enlarged,' appeared in 1609, and it appeared again in a much enlarged shape (two parts)* in 1637. Frequent editions were issued down to 1685. It is dedicated to 'Maximillion Dallison, of Hawlin,' Kent. It consists of letters from persons in a variety of situations, several of which are signed 'N. B.,' and read like extracts from the author's actual correspondence. One letter (*Let.* ii. 19) of this kind, 'To my dearest beloved friend on earth, H. W.,' tells the story of a life of sorrows, which has been assumed to be autobiographical. 9. 'A Mad World, my Masters, a merry dialogue betweene two travellers [Dorindo and Lorenzo],' London, 1603 and 1635. The first edition is dedicated to John Florio. Both editions are in the Bodleian. Middleton's play with the same title was published in 1608. 10*. 'A Dialogue full of Pithe and Pleasure: between three Phylosophers: Antonio, Meondro, and Dinarco: Vpon the Dignitie or Indignitie of Man. Partly translated out of Italian and partly set down by way of observation. By Nicholas Breton, Gentleman,' London, 1603, dedicated to 'Iohn Linewray, Esquier, Marster Surveior Generall of all her Maiesties Ordinance.' 11*. Grimello's Fortunes, with his Entertainment in his Travaile,' London, 1604. Two copies are in the Bodleian and one in the Huth Library. The address 'to the reader' is signed 'B. N.' 12*. 'An Olde Man's Lesson and a Yovng Man's Love, by Nicholas Breton,' London, 1605. One copy is in the Huth Library, dedicated to Sir John Linwraye, knight . . . of his Maiesties Ordinance.' 13. 'I pray you be not Angrie: A pleasant and merry Dialogue betweene two Travellers as they met on the Highway [touching their crosses, and of the vertue of patience]. By N. B.,' London, 1605 and (with a slightly

different title-page) 1624. In the Bodleian Library copy of the first edition the signature of the address to the reader is 'Nicholas Breton.' 14*. 'A Murmurer,' written 'against murmurers and murmuring,' London, 1607. The dedication, to 'the Lords of his Maiesties most Honorable privie Counsel,' is signed 'Nicholas Breton.' One copy is at Bridgewater House. 15**. 'Divine Considerations of the Soule . . . By N. B., G.,' London, 1608. It is dedicated to 'Sir Thomas Lake, one of the Clarkes of his Maiesties Signet, health, happinesse, and Heaven,' with the signature of 'Nich. Breton.' 16. 'Wits Private Wealth stored with Choice of Commodities to content the Minde,' 1612* and 1639—a collection of proverbial remarks—dedicated to 'Iohn Crooke, son and heire to Sir Iohn Crooke, knight,' with the signature of 'N. Britton.' 17*. 'Characters upon Essaies, Morall and Diuine,' London, 1615, dedicated by 'Nich. Breton' to Sir Francis Bacon. 18. 'The Good and the Badde, a Description of the Worthies and Vnworthies of this Age,' London, *1616 and 1643, dedicated by 'Nicholas Breton' to Sir Gilbert Houghton. 19**. 'Strange Newes ovt of Divers Countries,' London, 1622, with an address to the reader signed 'B. N.' 20*. 'Fantasticks, serving for a perpetuall Prognostication,' London, 1626. Copies are in Mr. Huth's and Dr. Grosart's libraries. There is a dedication to 'Sir Marke Ive, of Riuers Hall in Essex,' signed 'N. B.' Extracts appear in J. O. Halliwell's 'Books of Characters,' 1857. 21. 'The Court and Country, or a briefe Discourse betweene the Courtier and Countryman, of the Manner, Nature, and Condition of their lives. Dialoguewise set downe. . . . Written by N. B., Gent.,' London, 1618. A unique copy belongs to Mr. Christie-Miller of Britwell. 'Nich. Breton' signs the dedication to 'Sir Stephen Poll of Blaikmoore in Essex.' Mr. W. C. Hazlitt reprinted this book in his 'Inedited Tracts' (Roxburghe Club, 1868). 22. 'An Eulogistic Character of Queen Elizabeth, dedicated by the author, Nicholas Breton, to Robert Cecil, earl of Salisbury,' is extant in Breton's handwriting, in the Brit. Mus. MS. Harl. 6207 ff. 14–22. It was printed by Dr. Grosart for the first time.

The most serious mistake made by Breton's bibliographers has been the ascription to him of 'Sir Philip Sydney's Ourania . . . by N. B.' 1606. The author of this work is Nathaniel Baxter [q. v.] In the British Museum Catalogue 'Mary Magdalen's Lamentations for the Losse of Her Maister Jesus,' London, 1604, and 'The Passion of a Discontented Mind,' London, 1601, 1602, 1621, are erroneously ascribed to Breton. Robert Southwell was more probably the author of the latter. A unique copy of the first edition is in the Huth Library, and the second edition (in the Bodleian) is reprinted in J. P. Collier's 'Illustrations,' vol. i. The Rev. Thomas Corser ascribes 'The Case is Altered. How? Aske Dalio and Millo,' London, 1604 and 1635, to Breton; Mr. J. P. Collier assigns it to Francis Thynne, although internal evidence fails to support this conclusion.

Breton's name was pronounced Britton.

[Dr. Grosart has collected most of Breton's works in his edition, privately published, in the Chertsey Worthies Library (1877). The poetical works numbered above 1, 7, 13, and 15 do not appear there. The editions marked * and ** are in the British Museum, and the latter are believed to be unique. See also Corser's Collectanea; Ritson's Anglo-Poetica; Ellis's Specimens of the Early English Poets (1803) and Hunter's MS. Chorus Vatum in Brit. Mus. Addit. MS. 24487, ff. 307 et seq., which is especially valuable.] S. L.

BRETON, WILLIAM. [See BRITON.]

BRETT, ARTHUR (*d.* 1677 ?), poet, was, Wood believes, 'descended of a genteel family.' Having been a scholar of Westminster, he was elected to a studentship at Christ Church, Oxford, in 1653. He proceeded B.A. in 1656 and M.A. in 1659. He was one of the 'Terræ filii' in the act held in St. Mary's Church, 1661, 'at which time he showed himself sufficiently ridiculous.' Having taken orders, he became vicar of Market Lavington, Wiltshire, but he seems after a while to have given up the living. He came up to London, and there fell into poverty, begging from gentlemen in the streets, and especially from Oxford men. He was somewhat crazed, according to Wood, who met him by chance in 1675, and was perhaps annoyed by his importunity, for he writes with some bitterness of him. Brett was 'a great pretender to poetry.' He wrote: 1. 'A Poem on the Restoration of King Charles II,' 1660, included in 'Britannia rediviva.' 2. 'Threnodia, on the Death of Henry, Duke of Gloucester,' 1660. 3. 'Poem on the Death of the Princess of Orange,' 1660. 4. 'Patientia victrix, or the Book of Job in Lyric Verse,' 1661; and is also said to have written an essay on poetry. He died in his mother's house in the Strand 'about 1677.' Wood knows not 'where his lean and macerated carcase was buried, unless in the yard of St. Clement's church, without Temple Bar.'

[Wood's Athenæ Oxon. iii. col. 1144; Fasti, ii. 192, 220 (Bliss); Welch's Alumni Westmon. (1852), 141.] W. H.

BRETT, HENRY (*d.* 1724), colonel, of Sandywell Park, Gloucestershire, the associate of Addison and Steele, was eldest son of Henry Brett of Cowley, Gloucestershire, the descendant of the old Warwickshire family of Brett of Brett's Hall (see ATKYNS's *Gloucestershire*, p. 400; DUGDALE's *Warwickshire*, ii. 1039). Colley Cibber, who was intimate with him, says that young Brett was sent to Oxford and entered at the Temple, but was an idler about town in 1700, when he married Ann, the divorced wife of Charles Gerard, second earl of Macclesfield, who succeeded to the title in 1693. She was daughter of a Sir Richard Mason, knight, of Sutton, Surrey, and married the Earl of Macclesfield, then Lord Brandon, in 1683, but separated from him soon after. She had afterwards two illegitimate children, one of whom, by Richard Savage, fourth and last earl Rivers, was popularly identified with the unfortunate poet, Richard Savage (see *Notes and Queries*, 2nd ser. vi. 361 et seq.) The countess was divorced in 1698, when her fortune of 12,000*l.* (or, as some accounts have it, 25,000*l.*) was returned to her, and two years later she married Henry Brett. He was a very handsome young fellow, and the lady's sympathy is said to have been evoked by an assault committed upon him by bailiffs opposite her windows. After his marriage Henry Brett was thrice elected tory M.P. for Bishop's Castle, Salop, between 1701-08. He also obtained in 1705 the lieutenant-colonelcy of a regiment of foot newly raised by Sir Charles Hotham, but parted with it soon after. Brett was a well-known member of the little circle of which Addison was the head, and which held its social gatherings at Will's and afterwards at Button's. He is supposed to be the Colonel Rambler of the 'Tatler' (No. 7). He rebuilt Sandywell Park, which he sold to Lord Conway, and at one time had a share in the patent of Drury Lane Theatre (CIBBER, *Apology*, p. 212). He survived his friend Addison, and died, rather suddenly, in 1724. His will, wherein he is simply described as Henry Brett, and bequeaths all his real and personal property to his loving spouse Ann Brett, except his lottery tickets, half the proceeds of which, in the event of their drawing prizes, are to go to his sister Miller, was dated 14 Sept. 1724, and proved by his widow two days later. After her father's death, his daughter, Anna Margharetta Brett, who appears to have been the sole issue of the marriage, and who is described as a dark, Spanish-looking beauty, became the recognised mistress—the first English one—of King George I, then in his sixty-fifth year, by whom she is believed to have had no children. The young lady's ambition and prospects of a coronet were disappointed through the death of the king in 1727, and she subsequently married Sir William Leman, second baronet, of Northaw or Northall, Hertfordshire, and died without issue in 1743. Mrs. Brett lived to the age of eighty. She died at her residence in Old Bond Street, London, on 11 Oct. 1753. She is said to have been a woman of literary tastes, and Colley Cibber is stated to have esteemed her judgment so highly as to have submitted to her revision the manuscript of his best play, the 'Careless Husband,' which was first put on the boards in 1704.

Colonel Arthur Brett (whose daughter married Thomas Carte, the historian) is sometimes confounded with Henry Brett.

(ii.) 461, iv. 406; Walpole's Letters, i. p. cv; Apology for Life of Colley Cibber (1740, 4to), pp. 212, 214; Gloucestershire Notes and Queries, clxxxvi. (March 1881), decxcvii. (July 1882), where some of the details given are incorrect; Notes and Queries, 2nd ser. vi. 361 et seq., 5th ser. xi. 295, xii. 196; Gent. Mag. xxiii. 541.] H. M. C.

BRETT, GEORGE. [See KEYNES.]

BRETT, JOHN (*d.* 1785), captain in the royal navy, was probably the son or near kinsman of Captain Timothy Brett, with whom he went to sea in the Ferret sloop about the year 1722, with the rating of captain's servant. In May 1727 he followed Timothy Brett to the Deal Castle, and in the following November to the William and Mary yacht. On 2 March 1733-4 he was promoted to be lieutenant; in 1740 he commanded the Grampus sloop in the Mediterranean; and on 25 March 1741 was posted into the Roebuck of 40 guns by Vice-admiral Haddock, whom he brought home a passenger, invalided, in May 1742. In November 1742 he was appointed to the Anglesea, and in April 1744 to the Sunderland of 60 guns. He was still in the Sunderland and in company with the Captain, Hampton Court, and Dreadnought, when, on 6 Jan. 1744-5, they fell in with, and did not capture, the two French ships, Neptune and Fleuron [see GRIFFIN, THOMAS; MOSTYN, SAVAGE]. Fortunately for Captain Brett's reputation, the Sunderland had her mainmast carried away at an early period of the chase, and he thus escaped a share of the obloquy which attached to the others. He was afterwards sent out to join Commodore Warren at Cape Breton, and took part in the operations which resulted in the capture of Louisburg. In 1755 he commanded the Chichester in the

squadron sent under Rear-admiral Holburne to reinforce Boscawen on the coast of North America. On 19 May 1756 he was appointed to the St. George, and on 1 June was ordered to turn over to the Namur. Three days afterwards a promotion of admirals came out, in which Brett was included, with his proper seniority, as rear-admiral of the white. He refused to take up the commission, and it was accordingly cancelled (*Admiralty Minutes*, 4 and 15 June 1756). No reason for this refusal appears on record, and the correspondence that must have taken place between Brett and the admiralty or Lord Anson has not been preserved. It is quite possible that there had been some question as to whether his name should or should not be included in the promotion, and that this had come to Brett's knowledge; but the story, as told by Charnock, of his name having been in the first instance omitted, is contradicted by the official list.

From this time Brett lived in retirement, occupying himself, to some extent, in literary pursuits. In 1777-9 he published 'Translations of Father Feyjoo's Discourses' (4 vols. 8vo); and in 1780 'Essays or Discourses selected from the Works of Feyjoo, and translated from the Spanish' (2 vols. 8vo). A letter, dated Gosport, 3 July 1772 (Brit. Mus. *Add. MS.* 30871, f. 138), shows that he corresponded with Wilkes on friendly terms, and ranked himself with him as 'a friend of liberty.' He speaks also of his wife and children, of whom nothing further seems to be known. He died in 1785.

[Official Documents in the Public Record Office; Charnock's Biog. Nav. v. 67; Gent. Mag. li. 34. lv. 223.] J. K. L.

BRETT, JOHN WATKINS (1805-1863), telegraphic engineer, was the son of a cabinet-maker, William Brett of Bristol, and was born in that city in 1805. Brett has been styled, with apparent justice, the founder of submarine telegraphy. The idea of transmitting electricity through submerged cables is said to have been originated by him in conjunction with his younger brother. After some years spent in perfecting his plans he sought and obtained permission from Louis-Philippe in 1847 to establish telegraphic communication between France and England, but the project did not gain the public attention, being regarded as too hazardous for general support. The attempt was, however, made in 1850, and met with success, and the construction of numerous other submarine lines followed. Brett always expressed himself confident as to the ultimate union of England and America by means of electricity; an electric cable across the Atlantic was completed in 1858, but failed to work after transmitting a few messages. He died on 3 Dec. 1863 at the age of 58, and was buried in the family vault in the churchyard of Westbury-on-Trym, near Bristol. Brett published a work of 104 pages, 'On the Origin and Progress of the Oceanic Telegraph, with a few brief facts and opinions of the press' (London, 8vo, 1858), and contributed several papers on the same subject to the Institute of Civil Engineers, of which he was a member (cf. index of the 'Proceedings' of that society).

[Notes and Queries, 3rd ser. viii. 203, &c.; Catalogue of the Ronalds Library.] R. H.

BRETT, SIR PEIRCY (1709-1781), admiral, was the son of Peircy Brett, a master in the navy, and afterwards master attendant of the dockyards at Sheerness and at Chatham. After serving his time as volunteer and midshipman, he was, on 6 Dec. 1734, promoted to the rank of lieutenant and appointed to the Falkland with Captain the Hon. Fitzroy Lee. In her he continued till July 1738, when he was appointed to the Adventure, and a few months later to the Gloucester, one of the ships which sailed under Commodore Anson for the Pacific in September 1740. On 18 Feb. following Brett was transferred to Anson's own ship, the Centurion, as second-lieutenant, and in this capacity he commanded the landing party which sacked and burned the town of Paita on 13 Nov. 1741. After the capture of the great Acapulco ship, Brett became first-lieutenant, by the promotion of Saumarez, and was appointed by Anson to be captain of the Centurion on 30 Sept. 1743, when he himself left the ship on his visit to Canton. On the arrival of the Centurion in England the admiralty refused to confirm this promotion, although they gave Brett a new commission as captain dated the day the ship anchored at Spithead, and a few months later, under a new admiralty of which Anson was a member, the original commission was confirmed, 29 Dec. 1744 [see ANSON, GEORGE, LORD].

In April 1745 Brett was appointed to command the Lion, 60 guns, in the Channel; and on 9 July, being then off Ushant, he fell in with the French ship Elisabeth of 64 guns, a king's ship, nominally in private employ, and actually engaged in convoying the small frigate on board which Prince Charles Edward was taking a passage to Scotland. Between the Lion and Elisabeth a severe action ensued, which lasted from 5 p.m. till 9 p.m., by which time the Lion was a wreck, with 45 killed and 107

wounded out of a complement of 400; and the Elisabeth, taking advantage of her enemy's condition, drew off, too much injured to pursue the voyage. The drawn battle was thus as fatal to the Stuart cause as the capture of the Elisabeth would have been; for all the stores, arms, and money for the intended campaign were on board her, and the young prince landed in Scotland a needy and impoverished adventurer.

Early in 1747 Brett was appointed to the Yarmouth, 64 guns, which he commanded in the action off Cape Finisterre on 3 May; he was shortly afterwards temporarily superseded by Captain Saunders, but was reappointed in the autumn, and continued in the same ship till the end of 1750, during the latter part of which time she was guardship at Chatham. In 1752 Brett was appointed to the Royal Caroline yacht, and in the following January, having taken the king over to Germany, received the honour of knighthood. In February 1754 he was one of a commission appointed to examine into the condition of the port of Harwich, which was found to be silting up by the waste of the cliff. He continued in command of the yacht till the end of 1757, and in January 1758 was appointed to the Norfolk as commodore in the Downs. During Anson's cruise off Brest in the summer of 1758 he acted as first captain of the Royal George, in the capacity now known as captain of the fleet. He afterwards returned to the Norfolk and the Downs, and held that command till December 1761, during which period, in the summer of 1759, he was employed on a commission for examining the coasts of Essex, Kent, and Sussex, with a view to their defence against any possible landing of the enemy. His report (15 June 1759) is curious and interesting as showing the extraordinary ignorance of the government as to the nature of the country within a hundred miles of London. Early in 1762 he was sent out to the Mediterranean as second in command, and was soon after promoted to be rear-admiral. He came home the following year, after the peace, and did not serve again at sea, though he was a lord commissioner of the admiralty 1766-70 under Sir Edward Hawke. He was M.P. for Queenborough 1754–74. He became a vice-admiral of the blue 18 Oct. and of the white 24 Oct. 1770, admiral 29 Jan. 1778, and died 14 Oct. 1781. He was buried at Beckenham in Kent; a tablet to his memory is in the church.

He married in 1745 Henrietta, daughter of Mr. Thomas Colby, clerk of the cheque at Chatham, by whom he had two sons, who died in infancy, and a daughter, who married Sir George Bowyer. The Peircy Brett whose name appears in later navy lists as a captain of 1787 was a nephew, the son of William Brett, also a captain in the navy, who died in 1769. Lady Brett survived her husband but a few years; she died in August 1788, in the eighty-first year of her age, and was buried in the same vault in the church at Beckenham.

[Charnock's Biog. Nav. v. 239; Gent. Mag. li. 517, 623; Official Letters, &c., in the Public Record Office.] J. K. L.

BRETT, RICHARD (1560?–1637), a learned divine, was descended from a family which had been settled at Whitestanton, Somersetshire, in the time of Henry I (Collinson, *Somersetshire*, iii. 127). He was entered a commoner of Hart Hall in Oxford University in 1582, took one degree in arts, and was then elected a fellow of Lincoln College, where he set himself to perfect his acquaintance with the classical and eastern languages. According to Wood, 'he was a person famous in his time for learning as well as piety, skill'd and versed to a criticism in the Latin, Greek, Hebrew, Chaldaic, Arabic, and Ethiopic tongues.' In 1597 he was admitted bachelor of divinity, and he proceeded in divinity in 1605. In February 1595 he was presented to the rectory of Quainton, near Aylesbury, Buckinghamshire. On account of his special knowledge of the biblical languages he was appointed by James I one of the translators of the Bible into English. He published two translations from Greek into Latin: 'Vitæ sanctorum Evangelistarum Johannis et Lucæ à Simeone Metaphraste concinnatæ,' Oxford, 1597, and 'Agatharchidis et Memnonis historicorum quæ supersunt omnia,' Oxford, 1597. He was also the author of 'Iconum sacrarum Decas in quâ è subjectis typis compluscula sanæ doctrinæ capita eruuntur,' 1603. He died on 15 April 1637, aged 70, and was buried in the chancel of his church at Quainton. Over his grave a monument with his effigies and a Latin and English epitaph was erected by his widow. By his wife Alice, daughter of Richard Brown, sometime mayor of Oxford, he left four daughters.

[Wood's Athenæ (Bliss), ii. 611–2; Lipscomb's Buckinghamshire, i. 422, 434, 436; Collinson's Somersetshire, iii. 127.] T. F. H.

BRETT, ROBERT (1808–1874), surgeon, was born on 11 Sept. 1808, it is believed at or near Luton, Bedfordshire. As soon as he was old enough, he entered St. George's Hospital, London, as a medical pupil, and passed his examinations, both as M.R.C.S.E. and

L.S.A.L., in 1830. He then probably filled some hospital posts, and most certainly married; and at this time he was so deeply imbued with religious feeling that he wished to take holy orders, and go abroad as a missionary. But he was dissuaded from such a step, and continued the practice of his profession. On the death of his wife, he went as assistant to Mr. Samuel Reynolds, a surgeon at Stoke Newington, whose sister he married, and with whom he entered into a partnership which lasted fourteen years. He continued to practise at Stoke Newington until his death, on 3 Feb. 1874.

He entered heart and soul into the tractarian movement from its commencement, doing all in his power as a layman to forward it; he was honoured with the friendship of most of the leaders, especially Dr. Pusey, and his whole life and means were spent in promoting the interests of this section of the Church of England. Even the motto on his carriage was 'Pro Ecclesia Dei.' It was owing to his calling the attention of Edward Coleridge, of Eton, to the deplorable condition of the ruins of St. Augustine's, Canterbury, that a scheme was set on foot which resulted, through the munificence of Mr. Beresford Hope, in the establishment of St. Augustine's Missionary College. He parcelled out the parish of St. Matthias, Stoke Newington, and was the chief agent in the building of its church, as he also was subsequently in the erection of two churches at Haggerston and St. Faith's, Stoke Newington. He did other practical good work in founding the Guild of St. Luke, which consists of a band of medical men who co-operate with the clergy. He was an active member of the first church union that was started, and was at the time of his death a vice-president of the English Church Union.

Although, as may be imagined, his time was well occupied, yet he found leisure to write many devotional books (sixteen in number), such as 'Devotions for the Sick Room,' 'Companion for the Sick Room,' 'Thoughts during Sickness,' &c.

He was buried on 7 Feb. 1874 at Tottenham cemetery. A large number of clergymen, noblemen, physicians, and barristers attended his funeral.

[Private information.] J. A.

BRETT, THOMAS (1667–1744), nonjuring divine, was the son of Thomas Brett of Spring Grove, Wye, Kent. His father descended from a family long settled at Wye; his mother was Letitia, daughter of John Boys of Betshanger, Sandwich, where Brett was born. He was educated at the Wye grammar school, under John Paris and Samuel Pratt (afterwards dean of Rochester), and on 20 March 1684 admitted pensioner of Queens' College, Cambridge. He was removed by his father for extravagance, but permitted to return. He then found that his books had been 'embezzled by an idle scholar,' and migrated to Corpus on 17 Jan. 1689. He took the LL.B. degree on the St. Barnabas day following. He was ordained deacon on 21 Dec. 1690. After holding a curacy at Folkestone for a year he was ordained priest, and chosen lecturer at Islington. The vicar, Mr. Gery, encouraged him to exchange his early whiggism for tory and high-church principles. On the death of his father, his mother persuaded him to return (May 1696) to Spring Grove, where he undertook the cure of Great Chart. Here he married Bridget, daughter of Sir Nicholas Toke. In 1697 he became LL.D., and soon afterwards exchanged Great Chart for Wye. He became rector of Betshanger on the death of his uncle, Thomas Boys; and on 12 April 1705 Archbishop Tenison made him rector of Ruckinge, having previously allowed him to hold the small vicarage of Chislet 'in sequestration.' He had hitherto taken the oaths without scruple; but the attempts of his relation, Chief-baron Gilbert, to bring him back to whiggism had the reverse of the effect intended; and Sacheverell's trial induced him to resolve never to take the oath again. He published a sermon 'on the remission of sins,' in 1711, which gave offence by its high view of sacerdotal absolution, and was attacked by Dr. Robert Cannon [q. v.] in convocation (22 Feb. 1712). The proposed censure was dropped apparently by the action of Atterbury as prolocutor (*Letter about a Motion in Convocation, &c.* 1712). In a later sermon 'On the Honour of the Christian Priesthood' he disavowed a belief in auricular confession. On the accession of George I, Brett declined to take the oaths, resigned his living, and was received into communion by the nonjuring bishop Hickes. He afterwards officiated in his own house. He was presented at the assizes for keeping a conventicle, and in 1718 and 1729 complaints were made against him to Archbishop Wake for interfering with the duties of the parish clergyman. He was, however, let off with a reproof.

Brett was consecrated bishop by the nonjuring bishops Collier, Spinckes, and Howes in 1716. He took part in a negotiation which they opened in 1716 with the Greek archbishop of Thebais, then in London, and which continued till 1725, when it was allowed to drop. Brett's account, with copies of a proposed 'concordate,' and letters to the

Czar of Moscovy and his ministers, is given by Lathbury (*History of Nonjurors*, 1845, p. 309), from the manuscripts of Bishop Jolly. Before a definitive reply had been received from the Greek prelates, the church which made the overture had split into two in consequence of a controversy. Brett supported Collier in proposing to return to the use of the first liturgy of Edward VI, as nearer the use of the primitive church. He defended his view in a postscript to his work on 'Tradition.' He took part in various controversies connected with the nonjuring question, and joined in consecrating bishops with Collier and the Scotch bishop, Campbell. In 1727 he consecrated Thomas Brett, junior. He also contributed some notes to Zachary Grey's edition of 'Hudibras' (published 1744). Brett was an amiable man, of pleasant conversation, and lived quietly in his own house, where he died on 5 March 1743-4. He had twelve children. His wife died on 7 May 1765; his son, Nicholas, chaplain to Sir Robert Cotton, on 20 Aug. 1776.

Brett published many books of which full titles are given in Nichols's 'Anecdotes,' i. 411. They are as follows: 1. 'An Account of Church Government,' 1707, answered by Nokes in the 'Beautiful Pattern;' and enlarged edition 1710, answered by John Lewis, 1711, in 'Presbyters not always an authoritative part of Provincial Synods;' to which Brett replied. 2. 'Two Letters on the Times wherein Marriage is said to be prohibited,' 1708. 3. 'Letter to the Author of "Lay Baptism Invited,"' &c. (condemning lay baptism). This led to a controversy with Joseph Bingham, who replied in 'Scholastical History of Lay Baptism,' 1712. 4. Sermons on 'Remission of Sins,' 1711, reprinted with five others in 1715. 5. 'Review of Lutheran Principles,' 1714, answered by John Lewis. 6. 'Vindication of Himself from Calumnies' (charging him with popery), 1715. 7. 'Independency of the Church upon the State,' 1717. 8. 'The Divine Right of Episcopacy,' 1718. 9. 'Tradition necessary, &c.,' 1718, with answer to Toland's 'Nazarenus.' 10. 'The Necessity of discerning Christ's Body in the Holy Communion,' 1720. 11. 'Collection of the Principal Liturgies used by the Christian Church, &c.,' 1720; this was in reference to the schism of the nonjuring body. 12. 'Discourses concerning the ever blessed Trinity,' 1720. 13. Contributions to the 'Bibliotheca Literaria,' Nos. 1, 2, 4, and 8, upon 'University Degrees,' 'English Translations of the Bible,' and 'Arithmetical Figures.' 14. 'Instruction to a Person newly Confirmed,' 1725. 15. 'Chronological Essay on the Sacred History,' 1729. 16. 'General History of the World,' 1732. 17. 'Answer to (Hoadly's) "Plain Account of the Sacrament,"' 1735. 18. 'Remarks on Dr. Waterland's "Review of the Doctrine of the Eucharist,"' 1741. 19. 'Four Letters on Necessity of Episcopal Communion,' 1743. 20. 'Life of John Johnson,' prefixed to his posthumous tracts in 1748. There are also several sermons and tracts. There is a letter of his to Dr. Warren, of Trinity Hall, in Peck's 'Desiderata Curiosa' (lib. vii. p. 13). Three letters of his on the difference between Anglican and Romish tenets were published from the manuscripts of Thomas Bowdler in 1850; and a short essay on suffragan bishops and rural deans was edited by J. Fendall from the manuscript in 1858.

L. S.

BRETTARGH, KATHARINE (1579-1601), puritan, was daughter of a Cheshire squire, John Bruen of Bruen Stapleford, father of John Bruen [q. v.] She was baptised on 13 Feb. 1579, and from an early age she was distinguished by earnest religious feeling. When she was about twenty she was married to William Brettargh or Brettergh, of 'Brellerghoult'—Brettargh Holt—near Liverpool, who shared her puritan sentiments. The couple were said to have had some persecution at the hands of their Roman catholic neighbours. 'It is not unknowne to Lancashire what horses and cattell of her husband's were killed upon his grounds in the night most barbarously at two seuerall times by seminarie priests (no question) and recusants that lurked thereabouts.' Her piety, however, was such as to impress them in spite of her dislike of their creed. 'Once a tenant of her husband's being behinde with his rent, she desired him to beare yet with him a quarter of a yeare, which he did; and when the man brought his money, with teares she said to her husband, "I feare you doe not well to take it of him, though it be your right, for I doubt he is not well able to pay it, and then you oppresse the poore."' It is perhaps characteristic of the times that her biographer insists upon the circumstance that 'she never used to swear an oath great or small.' After a little more than two years of married life she was attacked by 'a hot burning ague,' of which she died on Whit Sunday, 31 May 1601. She was encouraged by a visit from her brother, John Bruen, and by the consolations of William Harrison and other puritans. Her biographers are indignant at the

imputation that she died despairing. She was buried at Childwall Church on Wednesday, 3 June, as appears from the title of the little book which forms the chief authority as to her life: 'Death's Advantage little Regarded, or the Soule's Solace against Sorrow, preached in two funerall sermons at Childwall, in Lancashire, at the buriall of Mistris Katherine Brettergh, 3 June 1601. The one by William Harrison, the other by William Leygh, B.D., whereunto is annexed the christian life and godly death of the said gentlewoman,' London, 1601. There is a portrait of her in Clarke's second part of the 'Marrow of Ecclesiastical History,' book ii., London, 1675, p. 52, from which it seems that her puritanism did not forbid a very elaborate ruff. The face is oval, the features refined, the hair closely confined by a sort of skull-cap, over which towers a sugarloaf hat.

[Ormerod's History of Cheshire, ed. Helsby, ii. 317–23; Morton's Memorials of the Fathers; and the two works cited above.] W. E. A. A.

BRETTELL, JACOB (1793–1862), unitarian minister, was born at Sutton-in-Ashfield, Nottinghamshire, on 16 April 1793. His grandfather was an independent minister at Wolverhampton, and afterwards assistant to James Wheatley at the Norwich Calvinistic methodist tabernacle. His father, Jacob Brettell, became a Calvinistic preacher at the age of seventeen, and after serving various chapels became an independent minister at Sutton-in-Ashfield in 1788. Here he renounced Calvinism, and in 1791 opened a separate meeting-house. In 1795 he became assistant to Jeremiah Gill, minister of the 'presbyterian or independent' congregation at Gainsborough, and on Gill's death, 1796, he became sole minister. He also kept a school (see notice by a pupil, E. S. Peacock, in *Notes and Queries*, 2nd series, xi. 378). He died 19 March 1810. His only son, Jacob, had been placed at Manchester College, York, in 1809. A public subscription, aided by the vicar of Gainsborough, provided for his continuance at York till 1814. He became unitarian minister at Cockey Moor (now called Ainsworth), Lancashire, in July 1814, and removed to Rotherham in September 1816. He resigned in June 1859 from failing health. Brettell is described as a good scholar and effective public speaker. He was a strong liberal, and took an active part in the anti-corn-law agitation, being an intimate friend of Ebenezer Elliott (1781–1849), the corn-law rhymester. His poetry shows taste and feeling. His later years were tried by adverse circumstances. He died 12 Jan. 1862. He had married, on 29 Dec. 1815, Martha, daughter of James Morris of Bolton, Lancashire, and had four sons and two daughters. His eldest son, JACOB CHARLES CATES BRETTELL, born 6 March 1817, was partly educated for the unitarian ministry at York, became a Roman catholic, and went to America, where he was successively classical tutor at New York, minister of a German church, and successful member of the American bar in Virginia and Texas; he died at Owensville, Texas, 17 Jan. 1867. Brettell published: 1. 'Strictures on Parkhurst's Theory of the Cherubim' (presumably his). 2. 'The Country Minister, a Poem, in four cantos, with other Poems,' 1821, 12mo (dedicated, 12 July 1821, to Viscount Milton, afterwards fifth Earl Fitzwilliam). 3. 'The Country Minister (Part Second). A Poem, in three cantos, with other Poems,' 1825, 12mo. 4. 'The Country Minister; a poem, in seven cantos: containing the first and second parts of the Original Work: with additional Poems and Notes,' 1827, 12mo (called 2nd edit.; Brettell's minor pieces are chiefly translations). 5. 'Sketches in Verse, from the Historical Books of the Old Testament,' 1628, 12mo (one of these, on Balak and Balaam, was printed in 'Monthly Repository,' 1826, pp. 360–7). 6. 'Staneage Pole' (poem, dated Sheffield 24 Feb. 1834, printed in 'Christian Reformer,' 1834, pp. 182–4). 7. 'The First Unitarian,' 1848, 8vo (controverting the opinion that 'Cain was the first unitarian;' Brettell thinks Cain was 'the third unitarian in strict chronological order'). Some of his hymns are in unitarian collections. A harvest hymn, 1837, in which he calls the Almighty 'bright Regent of the Skies,' is in Martineau's collections of 1840 and 1874 (altered in this latter to 'O Lord of earth and skies'). Besides these, he contributed some hundreds of uncollected pieces, being hymns and political and patriotic pieces, several of considerable length, to the 'Christian Reformer,' 'Sheffield Iris,' 'Wolverhampton Herald,' and other periodicals.

[Monthly Repos. 1810, p. 598, 1818, p. 368; Christian Reformer, 1862, p. 191; Rotherham and Masbro' Advertiser, 16 March 1867; Browne's History of Congregationalism in Norfolk and Suffolk, 1877, pp. 189, 348; information from Mr. Morris Brettell.] A. G.

BRETTINGHAM, MATTHEW, the elder (1699–1769), architect, was born at Norwich. He was a pupil of the better known William Kent, along with whom he was engaged in the erection of Holkham, the Earl of Leicester's seat in Norfolk. As a youth he travelled on the continent of Europe, and in 1723, 1725, 1728, and 1738 published 'Remarks on several Parts

of Europe, viz. France, the Low Countries, Alsatia, Germany, Savoy, Tyrol, Switzerland, Italy, and Spain, collected upon the spot since the year 1723,' in 4 vols. fol. The works at Holkham were commenced in 1729 from the plans of Kent, upon whose death in 1748 they were carried on under the superintendence of Brettingham till their completion in 1764. In 1761 he published 'Plans, Elevations, and Sections of Holkham in Norfolk, the seat of the Earl of Leicester,' London, atlas fol., of which another edition was published a few years later by his nephew, Robert Furze Brettingham [q. v.] It is curious that in neither of these publications is the real authorship of the plans acknowledged, although the fact that Kent designed them is beyond dispute. It is impossible now to ascertain the share of credit for the completed work to which Brettingham is entitled. As the construction of the house extended over so long a period after Kent's death, Brettingham no doubt modified the latter's original designs; but the drawings published by him do not differ in any way from the prevailing heaviness and regularity of the then fashionable 'Vitruvian' style of which Kent was master, and suggest at best but successful imitation on the part of his follower. Brettingham's other known works were Norfolk House (now 21 St. James's Square), London, erected in 1742; Langley Park, Norfolk, in 1740–4; the north and east fronts of Charlton House, Wiltshire; and a house in Pall Mall, afterwards known as Cumberland House, and subsequently used as the ordnance office, erected in 1760–7 for the Duke of York, brother to George III. In 1748–50 he again visited Italy, and in the first of these years travelled for some time in company with the well-known architects, Hamilton, 'Athenian Stuart,' and Nicholas Revett. Brettingham does not appear to have been influenced by the investigations made by these architects into the architecture of Greece. He always confined himself to the heavy Palladian style in which he had been educated, and in which, while exhibiting no great novelty of conception, it must be admitted he displayed knowledge and skill equal to those of any architect of his time. He died at Norwich at the advanced age of seventy, and is buried in St. Augustine's Church there.

BRETTINGHAM, MATTHEW, the younger (1725–1803), architect, son of the preceding, worked also in Palladian style (REDGRAVE).

[Views of the Seats of Noblemen and Gentlemen in England, Wales, Scotland, and Ireland, 1st ser. vol. iii London, 1818–23; Stuart and Revett's Antiquities of Athens measured and delineated, vol. iv., London, 1816; Vitruvius Britannicus, vol. iv., plates 64–9 incl.; Lowndes's Bibl. Manual; Gwilt's Encyc. of Architecture, ed. Wyatt Papworth, London, 1867; Gould's Biogr. Sketches, London, 1834.] G. W. B.

BRETTINGHAM, ROBERT FURZE (1750–1806?), architect, nephew of Matthew Brettingham the elder [q. v.], practised in London with great success, and erected many mansion houses throughout the country. Like his uncle, and in common with all students of architecture of his time, he spent a part of his early life in Italy, from which he returned in 1781. Architecture as then understood consisted in correctly imitating so-called classical models, and the skill of the architect was chiefly exercised in adapting the requirements of his patron to the hard and fast rules of his art. To gain familiarity with the latter constituted his education, and Brettingham's subsequent works, as well as the drawings which he exhibited on his return at the exhibitions of the then lately founded Royal Academy, showed that he did not neglect his opportunities in Italy. Among them may be noted in 1783 a drawing of a sepulchral chapel from the Villa Medici at Rome, in 1790 the design for a bridge which he had erected in the preceding year at Benham Place, in Berkshire, and the entrance porch of the church at Saffron Walden restored by him in 1792. In 1773 he published another edition of his uncle's 'Plans, &c. of Holkham,' also, like it, in atlas folio, 'to which are added the ceilings and chimney-pieces, and also a descriptive account of the statues, pictures, and drawings, not in the former edition.' Of the 'Descriptive Account' Brettingham was the author; but, again, the plans are ascribed to Matthew Brettingham, and Kent is ignored as in the former edition. The sudden death in 1790 of William Blackburn, the prison architect, was the opportunity of Brettingham's life, and he soon gained a lucrative practice. Blackburn left many designs incomplete, several of which Brettingham subsequently carried into execution. He erected gaols at Reading, Hertford, Poole, Downpatrick, Northampton, and elsewhere. In 1771 his name appears associated with those of the foremost architects of the time in the foundation of an 'Architects' Club,' to meet at the Thatched House Tavern to dinner on the first Thursday in every month. Among the original members of this club besides Brettingham were Sir W. Chambers, Robert Adam, John Soane, James Wyatt, and S. P. Cockerell, all of whom have made for themselves names in their profession. About this time Brettingham also held the post of resident

clerk in the board of works, which he resigned in 1805. Among his chief works for private patrons are a temple in the grounds at Saffron Walden in Essex for Lord Braybrooke, and a mausoleum in Scotland for the Fraser family; Winchester House, St. James' Square, erected originally for the Duke of Leeds; 9 Berkeley Square, afterwards sold to the Marquis of Buckingham; Buckingham House, 91 Pall Mall, rebuilt in 1794 by Sir John Soane; Lansdowne House, Berkeley Square; 80 Piccadilly, for Sir Francis Burdett; Charlton, Wiltshire, for the Earl of Suffolk; Waldersham, Kent, for the Earl of Guilford; Felbrigg Hall, Norfolk, for the Hon. W. Wyndham; Longleat, Wiltshire; and Roehampton, Surrey, and Hillsborough House in Ireland, both for the Marquis of Downshire. He is also supposed by some to have designed Maidenhead Bridge, on the Thames; but this is believed to be a mistake, the authorship of that design, which was executed in 1772, being invariably ascribed by the best authorities to Sir Robert Taylor. Brettingham was held in much regard by his professional brethren, and was the esteemed master of many who have since attained eminence in the architectural profession. The exact date of his death is not known.

[Authorities given under Matthew Brettingham; publications of Architectural Society; Lysons's Magn. Brit. vol. i.; Boydell's Thames.]

G. W. B.

BREVAL, JOHN DURANT (1680?–1738), miscellaneous writer, was descended from a French refugee protestant family, and was the son of Francis Durant de Breval, prebendary of Westminster, where he was probably born about 1680. Sir John Bramston, in his 'Autobiography,' p. 157, describes the elder Breval in 1672 as 'formerly a priest of the Romish church, and of the companie of those in Somerset House, but now a convert to the protestant religion and a preacher at the Savoy.' Bramston gives 1666 as the date of his conversion. The younger Breval was admitted a queen's scholar of Westminster School 1693, was elected to Trinity College, Cambridge, 1697, and was one of the Cambridge poets who celebrated in that year the return of William III after the peace of Ryswick. Breval proceeded B.A. 1700, and M.A. 1704. In 1702 he was made fellow of Trinity ('of my own electing,' said Bentley). In 1708 he was involved in a private scandal, which led to his removal from the fellowship. He engaged in an intrigue with a married lady in Berkshire, and cudgelled her husband, who illtreated his wife. The husband brought an action against Breval, who was held to bail for the assault, 'but, conceiving that there was an informality in the proceedings against him,' did not appear at the assizes, and was outlawed. Thereupon Bentley took the matter up, and on 5 April 1708 expelled Breval from the college. Bentley admitted that Breval was 'a man of good learning and excellent parts,' but said his 'crime was so notorious as to admit of no evasion or palliation' (*State of Trinity College*, p. 29 et seq. 1710). Breval, however, declared on oath that he was not guilty of immoral conduct in the matter, and bitterly resented the interposition of Bentley, who, he declared, had a private grudge both against his father and himself. His friends said 'that the alleged offence rested on mere rumour and suspicion,' and that the expelled fellow would have good grounds for an action against the college. Such an action, however, was never brought, probably on account of Breval's poverty. As Bentley wrote, 'his father was just dead [Francis Breval *d.* February 1707] in poor circumstances, and all his family were beggars.' Breval, in want and with his character ruined, enlisted in despair as a volunteer in our army in Flanders, where he soon rose to be an ensign. Here what Nichols calls 'his exquisite pencil and genteel behaviour,' as well as his skill in acquiring languages, attracted the attention of Marlborough. The general appointed him captain, and sent him on diplomatic missions to various German courts, which he accomplished very creditably. The peace of Utrecht closed the war in 1713, and a few years after we find Breval busily writing for the London booksellers, chiefly under the name of Joseph Gay. He then wrote 'The Petticoat,' a poem in two books (1716), of which the third edition was published under the name of 'The Hoop Petticoat' (1720); 'The Art of Dress,' a poem (1717); 'Calpe or Gibraltar,' a poem (1717); 'A Compleat Key to the Nonjuror' (1718), in which he accuses Colley Cibber of stealing his characters, &c., from various sources, but chiefly from Molière's 'Tartuffe,' for the revival of which Breval wrote a prologue; 'MacDermot, or the Irish Fortune Hunter,' a poem (1719), a witty but extremely gross piece; and 'Ovid in Masquerade' (1719). He also wrote a comedy, 'The Play is the Plot' (1718), which was acted, though not very successfully, at Drury Lane. When altered and reprinted afterwards as a farce, called 'The Strollers' (second impression 1727), it had better fortune.

About 1720 Breval went abroad with George, lord viscount Malpas, as travelling tutor. It was probably during this journey that he met with the romantic adventure that

gave occasion for Pope's sneer about being 'followed by a nun' (*Dunciad*, iv. 327). A nun confined against her will, in a convent at Milan, fell in love with and 'escaped to him.' The lady afterwards went to Rome, where, according to Horace Walpole, she 'pleaded her cause and was acquitted there, and married Breval;' but she is not noticed in the account which Breval published of his travels, under the title of 'Remarks on several Parts of Europe,' two vols. (vol. i. 1723, vol. ii. 1728, reprinted 1726; two additional in 1738), though we have a somewhat elaborate description of Milan, and an account of 'a *Milanese* Lady of great Beauty, who bequeathed her Skeleton to the Publick as a *memento mori*.' The cause of Pope's quarrel with Breval is to be sought elsewhere. The well-known poet Gay, with the help of Pope and Arbuthnot, produced the farce entitled 'Three Hours after Marriage,' which was deservedly damned. At this time (1717) Breval, who was writing a good deal for Curll, wrote for him, under the pseudonym of 'Joseph Gay,' a farce called the 'Confederates,' in which 'the late famous comedy' and its three authors were unsparingly ridiculed. Pope is described in the prologue as one

> On whom Dame Nature nothing good bestowed:
> In Form a Monkey; but for spite a Toad,

and he is represented (scene 1) as saying, 'And from My Self my own Thersites drew,' and then Thersites is explained as 'A Character in Homer, of an Ill-natur'd, Deform'd Villain.' In the same year Breval published, under similar auspices, Pope's 'Miscellany.' The second part consisted of five brief coarse and worthless poems, in one of which especially, called the 'Court Ballad,' Pope is mercilessly ridiculed. Revenge for these was taken in the 'Dunciad,' and Breval's name occurs twice in the second book (1728).

In the notes (1729) affixed to the first passage Pope says that some account must be given of Breval owing to his obscurity, and declares that Curll put 'Joseph Gay' on such pamphlets that they might pass for Mr. Gay's (viz. John Gay's). In 1742, when Breval had been dead four years, the fourth book of the 'Dunciad' was published. In line 272 a 'lac'd Governor from France' is introduced with his pupil, and their adventures abroad are narrated at some length (273–336). Pope, though, as he states, giving him no particular name, chiefly had Breval in his mind when he wrote the lines (Horace Walpole, *Notes to Pope*, p. 101, contributed by Sir W. Fraser, 1876).

After the publication of his 'Travels' Breval was probably again engaged as travelling governor to young gentlemen of position. In the account of Paris given in the second volume of the second issue of his 'Remarks' he says that he has collected the information 'in ten several tours thither' (p. 262). In the latter period of his life he wrote 'The Harlot's Progress,' an illustrated poem in six cantos, suggested by Hogarth's well-known prints, and said by Ambrose Philips, in a prefatory letter, to be 'a true Key and lively Explanation of the Painter's Hieroglyphicks' (1732); 'The History of the most Illustrious House of Nassau, with regard to that branch of it more particularly that came into the succession of Orange' (1734); 'The Rape of Helen, a mock opera' (acted at Covent Garden), (1737). Shortly after the publication of this last piece Breval died at Paris, January 1738.

[Welch's Alumni Westmon. (1852); Nichols's Lit. Anecd. vols. i. and viii. (1812 and 1814); Monk's Life of Bentley (1830); London Magazine, vii. 49; some information as to the family is given in a (not quite correct) manuscript note on the title-page of one of the copies of the House of Nassau in the British Museum, and also in the manuscript letters of his father to Lord Hatton and J. Ellis in the Addit. MS. (1854–75) (List in Index, p. 460).] F. W–T.

BREVINT or **BREVIN, DANIEL,** D.D. (1616–1695), dean of Lincoln, polemical and devotional writer, was born in the parish of St. John's in the island of Jersey, of which his father was the minister, and baptised in the parish church 11 May 1616. He proceeded to the protestant university of Saumur on the Loire, and studied logic and philosophy with great success, and took there the degree of M.A. in 1624. In 1636 three fellowships were founded by Charles I at Oxford, at the colleges of Exeter, Pembroke, and Jesus, at the instance of Archbishop Laud, for scholars from Guernsey and Jersey (Heylyn, *Life of Laud*, p. 336; Laud, *Works*, Anglo-Cath. Lib., vol. v. part i. p. 140), and Brevint was appointed in 1637 to that at Jesus, on the recommendation of the ministers and chief inhabitants of his native island (Wilkins, *Concilia*, iv. 534). On becoming resident at Oxford he requested the confirmation of his foreign degree. This was opposed by Laud, 'things being at Saumur as they were reported.' Writing to the vice-chancellor, on 19 May and 3 Nov. 1637, he expresses his satisfaction at hearing that 'the Guernsey [Jersey] man is so well a deserver in Jesus College,' but wishes 'that he should be made to know the difference of a master of art at Oxford and Saumur,' and 'the ill consequences' which might follow if his degree were confirmed, and begs the vice-chancellor to 'persuade the young man to stay, and then give him his degree with as much honour as

he pleases' (LAUD, *Works*, Anglo-Cath. Lib. pp. 170, 186). Laud's objections, however, were overruled, and Brevint was incorporated M.A. on 12 Oct. 1638 (WOOD, *Fasti Oxon.* i. 503), the authorities of the university having decided, upon due consideration, that there was no statutable bar to exclude him (LAUD, *Works*, 210). On the visitation of the university by the parliamentary commissioners Brevint was deprived of his fellowship, and retired to Jersey, whence, on the reduction of the island by the parliamentary forces, he took refuge in France, and officiated as minister of a protestant congregation in Normandy. On Trinity Sunday, 22 June 1651, he was ordained deacon and priest, 'in reguard of the necessitie of the time,' writes Evelyn, by Dr. Thomas Sydserf, bishop of Galloway, in Paris, in the private chapel of Sir Richard Browne, in the Faubourg St. Germain, at the same time as his fellow-islander, Dr. John Durell, afterwards dean of Windsor. Both were presented by Cosin, then dean of Peterborough (EVELYN, *Diary*, i. 244, ed. 1819; *Baker MSS.* xxxvi. 329; *Smith MSS.*, Bodl. xxxiii. 7, p. 29). Brevint secured the confidence of Cosin and the other principal English churchmen, both lay and clerical, then living in exile in Paris, and became known to Charles II. At this time Turenne was perhaps the most influential person in France, and Brevint received the high honour of being appointed his chaplain. Turenne's wife was a zealous protestant, and Brevint became her spiritual director, and for her use, and that of the Duchesse de Bouillon, he composed some of his devotional tracts, especially his 'Christian Sacrament and Sacrifice.' He was employed by Madame Turenne and the duchess in many of their religious undertakings, and he took a leading part in the vain endeavour to compromise the differences between the church of Rome and the protestant church (see Preface to *Saul and Samuel*). Upon the Restoration Brevint returned to this country. On Cosin's elevation to the see of Durham he succeeded him, on the nomination of the crown, in his stall in that cathedral (17 Dec. 1660) and in his rectory of Brancepeth, both of which he held till his death. These preferments were in some measure due to Cosin's influence with the king. He received the degree of D.D. at Oxford on 27 Feb. 1662–3. From a letter printed in the 'Granville Correspondence' (part ii. p. 92, Surtees Soc., vol. xlvii.), drawn up to be laid before the dean and chapter, it is evident that he earnestly supported Granville in his endeavour to restore the weekly communion in the cathedral. On the death of Dr. Michael Honywood, dean of Lincoln, in 1681, Charles II signified his desire to Archbishop Sancroft, through Sir Leoline Jenkins, that Brevint should have the vacant preferment (*Tanner MSS.* xxxvi. 17). He was installed dean and prebendary of Welton Paynshall on 7 Jan. 1681–2. As he continued to hold his stall at Durham, his name occurs pretty frequently in the Granville and Cosin Correspondences, which have been published by the Surtees Society (vols. xxxvii. xlvii. lii. lv.), but chiefly on matters of chapter business or chapter news. His tenure of the deanery of Lincoln was uneventful. He died in the deanery house, on Sunday, 5 May 1695, in the seventy-ninth year of his age, and was buried in the retro-choir of his cathedral. His wife, Anne Brevint, survived him thirteen years. She died on 9 Nov. 1708, also in her seventy-ninth year, and was buried in the same grave. Brevint's writings are chiefly directed against the church of Rome, which he attacked with much virulence and no little coarseness. He professes to speak from intimate personal knowledge, having had 'such an access given him into every corner of the church' when engaged on the design of reconciliation with the protestants, that he had a perfect acquaintance 'with all that is within its entrails' (Preface to *Saul and Samuel*). His works manifest a thorough acquaintance with the points at issue between the church of England and that of Rome, and his language is nervous and his arguments powerful; but he cannot be acquitted of gross irreverence, both of words and conception, when dealing with the eucharistic tenets of his opponents. His 'Missale Romanum' was printed at the Sheldonian Theatre, and we can hardly be surprised that his Romish antagonist, who, under the initials R. F., published 'Missale Romanum vindicatum' (London, 1674), should express his surprise that 'such an unseemly imp' as Dr. Brevint's calumnious and scandalous tract should have been 'hatched under the roof of Sheldon's trophy and triumph.' Brevint's published works were: 1. 'Missale Romanum; or the Depth and Mystery of the Roman Mass laid open and explained, for the use both of Reformed and Unreformed Christians,' Oxford, 1672, 8vo. 2. 'Saul and Samuel at Endor: the new Waies of Salvation and Service which usually temt (*sic*) men to Rome and detain them there, truly represented and refuted,' Oxford, 1674, 8vo. 3. 'The Christian Sacrament and Sacrifice; by way of Discourse, Meditation, and Prayer, upon the Nature, Parts, and Blessing of the Holy Communion,' Oxford, 1673, 12mo. The 'Christian Sacrament and Sacrifice' is a devotional work, originally

'one of many tracts made at Paris at the instance' of his noble patronesses for their private use, and intended for the reading of such as may be 'desirous to contemplate and embrace the Christian religion in its original beauty, freed of the encumbrance of controversy.' The view of the Eucharist put forth in this beautiful little work is, in the main, that expressed by the church of England in her Catechism and Liturgy. This devotional treatise was so highly esteemed by John and Charles Wesley that they published an abridgment of it for the use of communicants, as an introduction to their collection of Sacramental Hymns, pitched in a somewhat higher key in point of eucharistic doctrine than Brevint's works. Of this many successive editions have been published.

In addition to these English works, Anthony à Wood enumerates: 1. 'Ecclesiæ Primitivæ Sacramentum et Sacrificium, a pontificiis corruptelis et exinde natis controversiis liberum'—the Latin original of the last-named work. 2. 'Eucharistiæ Christianæ præsentia realis, et Pontificia ficta, . . . hæc explosa, illa suffulta et asserta.' 3. 'Pro serenissima Principe Weimariensi [the Princess of Weimar] ad Theses Jenenses accurata responsio.' 4. 'Ducentæ plus minus prælectiones in S. Matthæi xxv. capita,' &c. Brevint is more deserving of admiration as a devotional writer than as a controversialist.

[Wood's Athenæ Oxon. iv. 426–7; Kippis's Biog. Brit.; Laud's Chancellorship, Ang.-Cath. L., vol. v.; Evelyn's Diary, i. 244; Walker's Sufferings of the Clergy, p. 120; Hunt's Religious Thought in England, iii. 402.] E. V.

BREWER, ANTONY (*fl.* 1655), dramatic writer, wrote 'The Love-sick King, an English Tragical History, with the Life and Death of Cartesmunda, the Fair Nun of Winchester, by Anth. Brewer,' 1655, 4to; revived at the King's Theatre in 1680, and reprinted in that year under the title of 'The Perjured Nun,' 4to. Chetwood included the 'Love-sick King' in his 'Select Collection of Old Plays,' published at Dublin in 1750, but he made no attempt to correct the text of the old edition, which was printed with the grossest carelessness. The play was written in verse, but it is printed almost throughout as prose. Yet, after all allowance has been made for textual corruptions, it cannot be said that the 'Love-sick King' is a work of much ability; and it is rash to follow Kirkman, Baker, and Halliwell in identifying Antony Brewer with the 'T. B.' whose name is on the title-page of the 'Country Girl,' 1647, 4to, a well-written comedy, which in parts (notably in the third act) closely recalls the diction and versification of Massinger. There is no known dramatist of the time to whom the initials T. B. could belong. There was a versatile writer named Thomas Brewer [q. v.], and the title-pages to his tracts are usually signed with his initials, not with the full name. His claim to the 'Country Girl' would be quite as reasonable as Antony [Tony] Brewer's. In 1677 John Leanerd, whom Langbaine calls 'a confident plagiarist,' reprinted the 'Country Girl,' with a few slight alterations, as his own, under the title of 'Country Innocence.' To Antony Brewer was formerly ascribed 'Lingua, or the Combat of the Five Senses for Superiority,' 1607, 4to, a well-known dramatic piece (included in the various editions of Dodsley), constructed partly in the style of a morality and partly of a masque. The mistake arose thus. Kirkman, the bookseller and publisher, in printing his catalogues of plays, left blanks where the names of the writers were unknown to him. Annexed to the 'Love-sick King' was the name Antony Brewer; then came the plays 'Landgartha,' 'Love's Loadstone,' 'Lingua,' and 'Love's Dominion.' Phillips, who was followed by Winstanley, misunderstanding the use of Kirkman's blanks, promptly assigned all these pieces to Brewer. One other play, 'The Merry Devil of Edmonton,' 1608, 4to, has been with similar carelessness pronounced to be Antony Brewer's on the strength of an entry in the Stationers' Registry which refers to the prose tract of the 'Merry Devil' [see BREWER, THOMAS]. The play was entered in the registers on 22 Oct. 1607 (ARBER'S *Transcripts*, iii. 362).

BREWER, GEORGE (*b.* 1766), miscellaneous writer, was a son of John Brewer, well known as a connoisseur of art, and was born in 1766. In his youth he served as a midshipman under Lord Hugh Seymour, Rowland Cotton, and others (*Biog. Dram.* i. 67), and visited America, India, China, and North Europe. In 1791 he was made a lieutenant in the Swedish navy. Afterwards abandoning the sea, he read for law in London, and established himself as an attorney. He is believed to have written a novel, 'Tom Weston,' when in the navy, but his first appeal to the public of which there is evidence was a comedy, 'How to be Happy,' acted at the Haymarket in August 1794. After three nights, 'owing to the shaft of malevolence,' this comedy was withdrawn, and it was never printed. In 1795 Brewer wrote 'The Motto, or the History of Bill Woodcock,' 2 vols.;

and he wrote 'Bannian Day,' a musical entertainment in two acts, which was published and performed at the Haymarket in the same year for seven or eight nights, though but 'a poor piece.' In 1799 the 'Man in the Moon,' one act, attributed to Brewer, was announced for the opening night of the season at the Haymarket, but its production was evaded, and it disappeared from the bills. The next year (1800) Brewer published a pamphlet, 'The Rights of the Poor,' &c., dedicating it to 'Men who have great power, by one without any,' and this received copious notice in the 'Gentleman's Magazine' (lxx. 1168 et seq.) He was writing at this time also in the 'European Magazine,' some of his contributions being 'Siamese Tales' and 'Tales of the 12 Soubahs of Indostan;' and some essays, announced as after the manner of Goldsmith, which were collected and published by subscription in 1806 as 'Hours of Leisure.' In 1808 Brewer produced another two-volume tale, 'The Witch of Ravensworth;' and about the same time he published 'The Juvenile Lavater,' stories for the young to illustrate Le Brun's 'Passions,' which bears no date, but of which there were two or more issues, with slightly varying title-pages. A periodical, 'The Town,' attempted by Brewer after this, and stated by the authors of the 'Biog. Dram.' in 1812 to be 'now publishing,' would appear to have had but a short existence. The date of Brewer's death is not known. In his allusions to himself he speaks of having been 'misplaced or displaced in life,' of having had Vicissitude for his tutor, and of being luckless altogether.

Another work, 'The Law of Creditor and Debtor,' is set down in 'Biographica Dramatica,' and in Allibone, as by Brewer; and Allibone gives in addition 'Maxims of Gallantry,' 1793, and states 1791 as the date of publication of 'Tom Weston,' but there is no trace of either of these works in the British Museum.

[Baker's Biog. Dram. i. 67, ii. 48, 311, iii. 13; Introd. to Brewer's The Motto, pp. v–vii; Introd. to Brewer's Hours of Leisure, pp. xiv, xvi; Genest's Hist. of Engl. Stage, vii. 275; Biog. Dict. of Living Authors, p. 37.] J. H.

BREWER, JAMES NORRIS (*fl.* 1799–1829), topographer and novelist, was the eldest son of a merchant of London. He wrote many romances and topographical compilations, the best of the latter being his contributions to the series called the 'Beauties of England and Wales.' All the former are now forgotten. The titles of his works are as follows: 1. 'A Winter's Tale, a romance,' 1799, 4 vols. 12mo; 2nd edit., 1811. 2. 'Some Thoughts on the Present State of the English Peasantry,' 1807, 8vo. 3. 'Secrets made Public, a novel,' 4 vols., 1808, 12mo. 4. 'The Witch of Ravensworth,' 2 vols., 1808, 12mo. 5. 'Mountville Castle, a Village Story,' 3 vols., 1808, 12mo. 6. 'A Descriptive and Historical Account of various Palaces and Public Buildings, English and Foreign; with Biographical Notices of their Founders or Builders, and other eminent persons,' 1810, 4to. 7. 'An Old Family Legend,' 4 vols., 1811, 12mo. 8. 'Sir Ferdinand of England, a romance,' 4 vols., 1812, 12mo. 9. 'Sir Gilbert Easterling, a romance,' 4 vols. 12mo, 1813. 10. 'History of Oxfordshire' ('Beauties of England and Wales'), 1813, 8vo. 11. 'Warwickshire,' 1814. 12. 'Middlesex,' 1816. 13. 'Introduction to the Beauties of England and Wales, comprising observations on the Britons, the Romans in Britain, the Anglo-Saxons, the Anglo-Danes, and the Normans,' 1818, 8vo. 14. 'Histrionic Topography, or the Birthplaces, Residences, and Funeral Monuments of the most distinguished Actors,' 1818, 8vo. 15. 'The Picture of England, or Historical and Descriptive Delineations of the most curious Works of Nature and Art in each County,' 1820, 8vo. 16. 'The Delineations of Gloucestershire,' 4to. 17. 'The Beauties of Ireland,' 1826, 2 vols. 8vo. 18. 'The Fitzwalters, Barons of Chesterton; or Ancient Times in England,' 1829, 4 vols. 12mo. Brewer was a contributor to the 'Universal,' 'Monthly,' and 'Gentleman's' magazines.

[Biog. Dict. of Living Authors, 1816; Watt's Bibl. Brit.; Monthly Review, 2nd ser., lviii. 217.] C. W. S.

BREWER, JEHOIADA (1752?–1817), dissenting minister, was born at Newport in Monmouthshire about 1752. Influenced by a minister of Lady Huntingdon's connection, he took to preaching in the villages around Bath, and afterwards preached with remarkable popularity throughout Monmouthshire. Intending to enter the national church, he applied for ordination, but was refused by the bishop. Brewer persisted in preaching, whether ordained or not, and for some years he settled at Rodborough in Gloucestershire. He afterwards attracted a large congregation at Sheffield, where he spent thirteen years, and ultimately settled at Birmingham, where his ministry at Livery Street was numerously attended to the close of his life. He died 24 Aug. 1817. A spacious chapel was being built for him at the time he died, and he was buried in the grounds adjoining the unfinished edifice. A specimen of Brewer's

preaching is printed as part of the service at the ordination of Jonathan Evans at Foleshill in 1797, and Brewer's oration at the burial of Samuel Pearce at Birmingham was printed with Dr. Rylands's sermon on the same occasion in 1799. Brewer is now remembered only by a single hymn, printed with the signature of 'Sylvestris' in the 'Gospel Magazine,' 1776. A portrait of him was inserted in the 'Christian's Magazine,' 1791. A different portrait of him appeared in the 'Evangelical Magazine' in 1799.

[Evangelical Magazine, October 1817; Bishop's Christian Memorials of the Nineteenth Century, 1826; Gadsby's Hymn Writers, 1855.]

J. H. T.

BREWER, JOHN, D.D. (1744–1822), an English Benedictine monk, who assumed in religion the christian name of Bede, was born in 1744. In 1776 he was appointed to the mission at Bath. He built a new chapel in St. James's Parade in that city, and it was to have been opened on 11 June 1780, but the delegates from Lord George Gordon's 'No Popery' association so inflamed the fanaticism of the mob that on 9 June the edifice was demolished, as well as the presbytery in Bell-tree Lane. The registers, diocesan archives, and Bishop Walmesley's library and manuscripts perished in the flames; and Dr. Brewer had a narrow escape from the fury of the rioters. The ringleader was tried and executed, and Dr. Brewer recovered 3,735*l.* damages from the hundred of Bath.

In 1781 the duties of president of his brethren called Dr. Brewer away from Bath. Subsequently Woolton, near Liverpool, became his principal place of residence, and there he died on 18 April 1822.

He brought out the second edition of the Abbé Luke Joseph Hooke's 'Religio Naturalis et Revelata,' 3 vols., Paris, 1774, 8vo, to which he added several dissertations.

[Oliver's Hist. of the Catholic Religion in Cornwall, 56, 508; Biog. Univ. Suppl. lxvii. 291.]

T. C.

BREWER, JOHN SHERREN (1810–1879), historical writer, was the son of a Norwich schoolmaster who bore the same christian names. His family originally belonged to Kent. His father was brought up in the church of England, but became a baptist. He was a good biblical scholar, and devoted his leisure to the study of Hebrew. He had a large family, but only four sons grew up, of whom John Sherren, the eldest, notwithstanding his father's nonconformist leanings, was sent to Oxford, where, having joined the church of England, he entered Queen's College, and obtained a first class *in literis humanioribus* in 1832. In his Oxford years every one seems to have been struck with the extraordinary range of his reading. For a short time he remained at the university as a private tutor, but he shut himself out from a fellowship by an early marriage. In 1870 he was elected honorary fellow of Queen's College. During this time (1836) he brought out an edition of Aristotle's 'Ethics.' His domestic life was soon clouded, first by a great change of circumstances, his father-in-law having lost a fortune; afterwards by the death and infirmity of some of his children. He removed to London, where he took deacon's orders in 1837, and was the same day appointed chaplain to the workhouse of the united parishes of St. Giles-in-the-Fields and St. George, Bloomsbury.

He had been strongly influenced by the Oxford movement of those days, and retained to the last, notwithstanding differences, a very warm regard for its leader, Cardinal Newman. He devoted himself to the duties of his chaplaincy with a zeal which was gratefully remembered by old persons forty years after. One result of his experience was a lecture on workhouse visiting, which is included in a volume entitled 'Lectures to Ladies on Practical Subjects,' published in 1855. He valued highly, but not fantastically, the artistic element in religious worship, and from the first taught the boys, and even some of the older inmates, of the workhouse to sing the psalms to the Gregorian chants. When the church adjoining the workhouse in Endell Street was built, it was proposed that the chaplaincy should be united with the incumbency, and that Brewer should be the first incumbent. He took great interest in the architecture, making models with his own hand in cardboard and bark. But a difference of opinion with the rector of St. Giles prevented his appointment, and made him resign the chaplaincy, after which, though he assisted other clergymen at times, he for many years held no cure.

Meanwhile, for a short time he found some employment in the British Museum. Before leaving Oxford, he had drawn up for the Record Commission a catalogue of the manuscripts in some of the colleges there. In 1839 he was appointed lecturer in classical literature at King's College, London. His friend, the Rev. F. D. Maurice, became professor of English literature and modern history the year after; and from that time, notwithstanding some differences in their views, he most cordially co-operated with him in many things. After the removal of Mr. Maurice from King's

College, Brewer, in 1855, was appointed professor of the English language and literature and lecturer in modern history. An ardent lover of the classics, he was not less devoted to English literature, the study of which he invariably combined with that of modern history as the only mode of making either study fruitful; and his method of teaching was highly calculated to awaken the best thinking power in his hearers. His classes both at King's College and afterwards in the Working Men's College, where he for some years assisted Mr. Maurice, and ultimately succeeded him as principal, were always numerously attended by a highly interested audience.

He was also busy with his pen—at first mainly as a journalist. From about the year 1854 he continued for six years to write in the columns of the 'Morning Post,' the 'Morning Herald,' and the 'Standard,' of which last paper he became the editor. He resigned in consequence of a dispute with the manager about the employment of a Roman catholic contributor, whose claims he supported. Thoroughly liberal-minded, he appreciated every man's capacity, whatever his leanings might be, and strove to give every one a fair field for his talents. But he soon became absorbed in other work, far less remunerative, though in his eyes of very high importance; and after quitting the 'Standard' he wrote little in any newspaper except a number of very strong letters in the 'Globe' against the policy of disestablishing the Irish Church. In 1856 he was commissioned by the master of the rolls, Sir John Romilly, to prepare a calendar of the state papers of Henry VIII—a work of peculiar labour, involving concurrent investigations at the Record Office and the British Museum, as well as at Lambeth and other public libraries; and in this he continued to be engaged till the day of his death. His advice was for a long time continually sought by Sir Thomas Hardy, the deputy-keeper of the public records, on matters connected with the literary work of the office. He was also appointed by Lord Romilly reader at the Rolls, and afterwards preacher there—a post of greater name than emolument. Some years later he was consulted by the delegates of the Clarendon Press as to a projected series of English classics, of which several volumes have now been published. The plan of the series was drawn up by Brewer, and it was intended that he should write a general introduction to it; but he died before the scheme was sufficiently advanced to enable him to do so.

In 1877 the crown living of Toppesfield in Essex was given to him by Mr. Disraeli, who was then prime minister. He gave up his professorship at King's College, but still remained editor of the calendar of Henry VIII, though he endeavoured to take his editorial work more lightly, while he threw himself into his parochial duties with the zeal and energy he had displayed in everything else. For some time his usually robust health had been slightly impaired. In February 1879 he caught cold after a long walk to visit a sick parishioner. The illness soon affected his heart, and in three days he died.

His principal works are those which he produced for the Record Office, among which the calendar of 'Letters and Papers of the Reign of Henry VIII' holds the first place. The prefaces to the volumes of this calendar have been collected and published in a separate form with the title of 'the Reign of Henry VIII,' 1884, under the editorship of J. Gairdner. And besides some other calendars and official reports, his 'Monumenta Franciscana,' and his editions of certain works of Roger Bacon and Giraldus Cambrensis, also published for the master of the rolls, deserve particular mention. Besides these he published, through ordinary channels, Bishop Goodman's account of the 'Court of King James I.,' an admirable edition of Fuller's 'Church History,' another of Bacon's 'Novum Organum,' 'An Elementary Atlas of History and Geography,' and the 'Student's Hume,' revised edition 1878. He was also the author of some treatises published by the Christian Knowledge Society on the 'Athanasian Creed' and the 'Endowments and Establishment of the Church of England.' Early in his career he had also undertaken an edition of Field's 'Book of the Church,' of which, however, only one volume was issued, in 1843. Dr. Wace edited in 1881 his 'English Studies,' reprinted from the 'Quarterly Review.'

[Memoir prefixed to Brewer's English Studies by Dr. Wace, supplemented by personal knowledge and information derived from the family.]

J. G.

BREWER, SAMUEL (*d.* 1743?), botanist, was a native of Trowbridge in Wiltshire, where he possessed a small estate, and was engaged in the woollen manufacture, but seems to have been unsuccessful in business. He communicated some plants to Dillenius for the third edition of Ray's 'Synopsis,' published in 1724, and accompanied the editor in 1726 from Trowbridge to the Mendips, and thence to Bristol, passing onward to North Wales and Anglesey. Brewer remained in Bangor for more than a twelvemonth, botanising with Rev. W. Green and W. Jones, and sending dried plants to Dillenius, particularly

mosses, thus clearing up many doubtful points. In the autumn of 1727 he went into Yorkshire, living at Bingley, and afterwards at Bierley, near Dr. Richardson, who befriended him. The loss of 20,000*l.* of his own earnings, and of a large estate left to him by his father, which was taken by his elder brother, gave a morbid tone to his letters. His son was sent to India through the influence of Dr. James Sherard of Eltham, but the father quarrelled with the doctor in 1731 about some plants. His daughter also seems to have acted 'undutifully' towards him. He had a small house and garden at Bierley, and devoted himself to the culture of plants; afterwards he became head-gardener to the Duke of Beaufort at Badminton, and died at Bierley, at Mr. John Pollard's house; he was buried close to the east wall of Cleckheaton chapel. Although unfortunate in business, he was a good collector of plants, insects, and birds; the botanical genus *Breweria* was founded by Robert Brown in his honour, and a species of rock-rose, a native of North Wales, discovered by him, bears the name of 'Helianthemum Breweri.' He is mentioned in the Richardson correspondence in 1742, but the dates of his birth and death are uncertain.

[Pulteney's Biog. Sketches of Botany (1790), ii. 188–90; Richardson Correspondence, 252, 270, 273, 276–88, 298, 313, &c.; Dillenius's Hist. Musc. viii.; Nichols's Illustr. of Lit. i. 288, &c.; Sloane MS. 4039.] B. D. J.

BREWER, THOMAS (*fl.* 1624), miscellaneous writer, of whose life no particulars are known, was the author of some tracts in prose and verse. The first is a prose tract entitled 'The Life and Death of the Merry Deuill of Edmonton. With the Pleasant Pranks of Smug the Smith, Sir John and mine Host of the George about the Stealing of Venison. By T. B.,' London, 1631, 4to, black letter; reprinted in 1819. The author's name, 'Tho. Brewer,' is inscribed on the last leaf. This piece was written and probably printed at a much earlier date, for on 5 April 1608 'a booke called the lyfe and deathe of the Merry Devill of Edmonton, &c., by T. B.,' was entered in the Stationers' Registers (Arber's *Transcripts*, iii. 374). Mr. A. H. Huth possesses a unique exemplar, printed in 1657, with the name 'T. Brewer, Gent.,' on the title-page. The popularity of the comedy of the 'Merry Devil of Edmonton' doubtless suggested the title of this droll tract, which tells us little about Peter Fabell, and deals mainly with the adventures of Smug. In 1624 Brewer published a small collection of satirical verses, under the title of

A Knot of Fooles. But
Fooles or Knaves or both I care not,
Here they are; come laugh and spare not,

4to, 14 leaves, 2nd ed. 1658. The stanzas to the reader are signed 'Tho. Brewer;' they are followed by a dialogue between fools of various sorts. The body of the work consists of satirical couplets, under separate titles, on the vices of the day. 'Pride teaching Humility,' the concluding piece, is in seven-line stanzas. Brewer's next production was a series of poems descriptive of the plague, entitled 'The Weeping Lady, or London like Ninivie in sack-cloth. Describing the Mappe of her owne Miserie in this time of Her heavy Visitation . . . Written by T. B.,' 1625, 4to, 14 leaves. The dedication to Walter Leigh, esq., and the Epistle to the Reader are signed 'Tho. Brewer.' On the title-page is a woodcut (repeated on the verso of A 3) representing a preacher addressing a crowd from St. Paul's Cross; a scroll issuing from his mouth bears the inscription, 'Lorde, haue mercy on vs. Weepe, fast, and pray.' Each page, both at top and bottom, has a mourning-border of deep black. The most striking part of the tract is a description of the flight of citizens from the metropolis, and of the sufferings which they underwent in their attempts to reach a place of safety. Two other tracts by Brewer relating to the plague were published by H. Gosson in 1636: (1) 'Lord have Mercy upon us. The World, a Sea, a Pest House,' 4to, 12 leaves; (2) 'A Dialogue betwixt a Cittizen and a poore Countrey-man and his Wife. London Trumpet sounding into the country. *When death drives the grave thrives.*' A copy of the last-named tract (or tracts?) was in Heber's library (*Bibl. Heber.* pt. viii. No. 234). In 1637 Brewer contributed to a collection of verse, entitled 'The Phœnix of these late times, or the Life of Mr. Henry Welby, Esq.,' 4to. Lemon ascribes to Brewer a broadside by T. B. (preserved in the library of the Society of Antiquaries), entitled 'Mistress Turner's Repentance, who, about the poysoning of the Ho. Knight Sir Thomas Overbury, was executed the fourteenth day of November last,' 1615. 'London's Triumph,' 1656, by T. B., a descriptive pamphlet of the lord mayor's show for that year, is probably by Brewer. Brewer has commendatory verses in Taylor's 'Works' (1630), and in Heywood's 'Exemplary Lives . . . of Nine the most worthy Women of the World' (1640).

[Corser's Collectanea; Collier's Bibliographical Catalogue; Hazlitt's Handbook; Arber's Transcripts, iii. 165; Bibliotheca Heberiana, pt. viii. No. 234; Catalogue of Huth Library; Fairholt's Lord Mayors' Pageants, ii. 282.] A. H. B.

BREWER, THOMAS (*b.* 1611), a celebrated performer on the viol, was born (probably in the parish of Christchurch, Newgate Street) in 1611. His father, Thomas Brewer, was a poulterer, and his mother's christian name was True. On 9 Dec. 1614 Brewer was admitted to Christ's Hospital, although he was only three years old. Here he remained until 20 June 1626, when he left school, and was apprenticed to one Thomas Warner. He learnt the viol at Christ's Hospital from the school music-master, but although his compositions are met with in most of the printed collections of Playford and Hilton, published in the middle of the seventeenth century, nothing is known as to his biography. His printed works consist chiefly of rounds, catches, and part-songs, but in the Music School Collection at Oxford are preserved three instrumental pieces, consisting of airs, pavins, corrantos, &c., for which kind of composition he seems to have been noted. Two pieces by him are in Elizabeth Rogers's Virginal Book (*Add. MS.* 10337). In a collection of anecdotes (*Harl. MS.* 6395), formed by one of the L'Estrange family in the seventeenth century, the following story is told on the authority of a Mr. Jenkins: 'Thom: Brewer, my Mus: seruant, through his Pronenesse to good-Fellowshippe, hauing attaind to a very Rich and Rubicund Nose; being reproued by a Friend for his too frequent vse of strong Drinkes and Sacke; as very Pernicious to that Distemper and Inflamation in his Nose. Nay—Faith, sayes he, if it will not endure sack, it's no Nose for me.' The date of Brewer's death is unknown.

W. B. S.

BREWER, BRIWERE, or BRUER, WILLIAM (*d.* 1226), baron and judge, the son of Henry Brewer (Dugdale, *Baronage*), was sheriff of Devon during the latter part of the reign of Henry II, and was a justice itinerant in 1187. He bought land at Ilesham in Devon, and received from the king the office of forester of the forest of Bere in Hampshire. A story told by Roger of Wendover (iv. 238), which represents Richard as whispering to Geoffrey FitzPeter and William Brewer his reverence for the bishops who were consulting together before him, tends to show, if indeed the king were not merely acting, that he treated Brewer as a familiar friend. When Richard left England, in December 1189, he appointed Brewer to be one of the four justices to whom he committed the charge of the kingdom. Brewer was at first a subordinate colleague of Hugh, bishop of Durham, the chief justiciar. Before long, however, Bishop Hugh was displaced by the chancellor, William Longchamp, bishop of Ely. When the king heard of the insolence and unpopularity of the chancellor, he wrote to Brewer and his companions, telling them that if he was unfaithful in his office they were to act as they thought best as to the grants of escheats and castles, and wrote also to the chancellor, bidding him act in conjunction with his colleagues. At a great council held at St. Paul's, on 8 Oct. 1191, the Archbishop of Rouen produced a letter from the king appointing him justiciar in place of Longchamp, and naming Brewer and others as his assistants. Brewer evidently was prominent in the proceedings taken against the chancellor; for his name is on the list of the bishops and barons whom the displaced minister threatened with excommunication. In 1193 he left England to assist the king, then in captivity, at his interview with the Emperor Henry VI. He arrived at Worms on 29 July, the day on which the terms of the king's release were finally arranged. After this matter was settled, Richard sent him, in company with the Bishop of Ely 'and other wise men,' to arrange a peace with Philip of France. The treaty was signed on 9 July at Nantes. On the king's return to England in the spring of 1194, Brewer and others who had been concerned in the proceedings against the chancellor were deprived of the sheriffdoms they then held, but were appointed to other counties, 'as if the king, although he could not dispense with their services, wished to show his disapproval of their conduct in the matter' (Stubbs, *Const. Hist.* i. 503). A serious dispute having arisen between Geoffrey, archbishop of York, and his chapter, the Archbishop of Canterbury, who was at that time the justiciar, sent Brewer with other judges to York in July to settle the quarrel. They summoned the archbishop, and on his refusing to appear seized his manors, and caused the canons whom he had displaced to be again installed. Brewer also appears as one of the justices who were sent on the great visitation, or 'iter,' in the following September. In 1196 he founded the abbey of Torr in Devon, as a house of Præmonstratensian canons (Dugdale, *Mon.* vi. 923). During the reign of Richard he became lord of the manor of Sumburne, near Southampton, and held the sheriffdoms of Devonshire, Oxfordshire, Buckinghamshire,

Berkshire, Nottinghamshire, and Derbyshire (Dugdale, *Bar.*) He married Beatrice de Valle. In 1201 Brewer founded the abbey of Motisfont as a house of Augustinian canons. This foundation has been ascribed to his son William (*Ann. de Osen.*), but the charters of the abbey prove that it was the work of the father (*Mon.* vi. 480). On 15 Aug. of the same year he was present as founder at the foundation of the Cistercian abbey of Dunkeswell in Devonshire. He is said also to have founded the Benedictine nunnery of Polslo in that county (*Ann. de Margam*; *Mon.* iv. 425, v. 678).

During the reign of John, Brewer held a prominent place among the king's counsellors. His name appears among the witnesses of the disgraceful treaty made with Philip at Thouars in 1206. When an attempt was made to reconcile the king to Archbishop Langton in 1209, he joined Geoffrey Fitz-Peter and others in guaranteeing the archbishop's safety during his visit to England, and saw him safely out of the kingdom. During the period of the interdict he strongly upheld the king, and is mentioned by Wendover (iii. 238) as one of John's evil advisers, who cared for nothing else save to please their master. The king's extortions from the clergy, the monks, and especially the Cistercians, were in obedience to Brewer's advice, and in 1210 he caused the king to forbid the Cistercian monks to attend the annual chapter of their order—a sin which, according to Paris, brought him and others concerned to a sorrowful end. He signed the treaty made by John with the Count of Boulogne in May 1212. On 15 May 1213 he signed the charter by which John surrendered the crown and kingdom of England to Innocent III, and on 21 Nov. 1214 the charter granting freedom of election to sees and abbeys, by which the king hoped to win the English church to his side. When the barons made a confederation against the king at Brackley in 1215, and drew up the list of their demands, Brewer refused to join them. After their entry into London, however, he and other ministers of the king were compelled to act with the baronial party, and his name appears among the signatures subscribed to the great charter. His heart, however, was by no means in the work, and when war broke out he became one of the leaders of the army left by John to watch the baronial forces, cut off their supplies, and ravage their lands. On the death of John he assisted at the coronation of Henry at Gloucester on 28 Oct. 1216. He warmly espoused the cause of the young king against the French, and joined with other barons in pledging himself to ransom all prisoners belonging to the king's party. He was one of those who guaranteed the observance of the treaty of Lambeth on 11 Sept. 1217, though he did not approve of the moderate terms granted to Louis (*Ann. Wav.*) The next year he was present with the king and court at the dedication of the cathedral church of Worcester, to which he afterwards presented a chalice of gold of four marks weight, 'not to be removed from the church save for fire, hunger, or necessary ransom' (*Ann. Wig.*) With the restlessness and plots of the foreign party Brewer had no sympathy, and, indeed, seems to have acted in full accord with the justiciar Hubert de Burgh. In 1221 he sat as one of the barons of the exchequer (Foss, *Biog. Jurid.*) He was one of the favourite counsellors of Henry III, and his influence with the king was not for good. For example, when in January 1223 Archbishop Langton and the lords demanded that Henry, who was then holding his Christmas festival at Oxford, should confirm the great charter, Brewer answered for the king, and said: 'The liberties you ask for ought not to be observed; for they were extorted by force.' Indignant at this declaration, the archbishop rebuked him. 'William,' he said, 'if you loved the king you would not disturb the peace of the kingdom.' The king saw that the archbishop was angry, and at once yielded to his demand (Rog. Wend. iv. 84). Later in the same year Honorius III associated Brewer with the Bishop of Winchester and the justiciar in a letter declaring Henry to be of full age. He died in 1226, having assumed, probably when actually dying, as was not infrequently done, the habit of a monk at Dunkeswell, and was buried there in the church he had founded. During the reigns of John and Henry III he acquired great possessions. By John he was made guardian of Henry Percy and of many other rich wards. He received a large number of grants from the king, and among them the manor of Bridgwater, with an ample charter creating that place a free borough with a market (Dugdale, *Bar.*) In this town he founded the hospital of St. John Baptist, for the maintenance of thirteen sick poor, besides 'religious' and pilgrims (*Mon.* vi. 662). In the same reign he also acquired half the fee of the house of Brito: this acquisition probably was made unjustly ('per potestatem domini Willielmi Bruyere veterioris,' *Inq. p. m.* 49 *Hen. III*; *Somerset Archæol. Soc. Proc.* xxi. ii. 33). It included the honour of Odcomb, with other places in Somersetshire and Devonshire. The memory of this grant is preserved in the name of Ile Brewers, a village near Langport, which

passed to him along with Odcomb. One of Brewer's sons, Richard, died before him. He left one son, William, and five daughters, who all married men of wealth and importance. The names of two brothers of Brewer are preserved, John and Peter of Rievaulx. Peter became a hermit at Motisfont; for a document of that house says that he was called 'The Holy Man in the Wall,' and that he did many miracles (*Mon.* vi. 481). It should, however, be noted that the Peter of Rievaulx who was treasurer in the reign of Henry III was the nephew or son (MATT. PARIS, iii. 220) of Peter des Roches, bishop of Winchester, and so, if the Motisfont document is of any value at all, was a different man from the hermit there spoken of.

H.

BREWSTER, ABRAHAM (1796–1874), lord chancellor of Ireland, son of William Bagenal Brewster of Ballinulta, Wicklow, by his wife Mary, daughter of Thomas Bates, was born at Ballinulta in April 1796, received his earlier education at Kilkenny College, and, then proceeding to the university of Dublin in 1812, took his B.A. degree in 1817, and long after, in 1847, his M.A. degree. He was called to the Irish bar in 1819, and, having chosen Leinster for his circuit, soon acquired the reputation of a sound lawyer and a powerful speaker. Lord Plunket honoured him with a silk gown on 13 July 1835. Notwithstanding the opposition of Daniel O'Connell, he was appointed legal adviser to the lord-lieutenant of Ireland on 10 Oct. 1841, and was solicitor-general of Ireland from 2 Feb. 1846 until 16 July. By the influence of his friend Sir James Graham, first lord of the admiralty, he was attorney-general of Ireland from 10 Jan. 1853 until the fall of the Aberdeen ministry, 10 Feb. 1855.

Brewster was very active in almost all branches of his profession after his resignation, and his reputation as an advocate may be gathered from the pages of the 'Irish Law and Equity Reports,' and in the later series of the 'Irish Common Law Reports,' the 'Irish Chancery Reports,' and the 'Irish Jurist,' in all of which his name very frequently appears. Among the most important cases in which he took part were the Mountgarrett case in 1854, involving a peerage and an estate of 10,000*l.* a year; the Carden abduction case in July of the same year; the Yelverton case, 1861; the Egmont will case, 1863; the Marquis of Donegal's ejectment action; and lastly, the great will cause of Fitzgerald *v.* Fitzgerald, in which Brewster's statement for the plaintiff is said to have been one of his most successful efforts.

On Lord Derby becoming prime minister, Brewster succeeded Francis Blackburne [q.v.] as lord justice of appeal in Ireland in July 1866, and lord chancellor of Ireland in the month of March following. As lord chancellor he sat in his court for the last time on 17 Dec. 1868, when Mr. Disraeli's government resigned. He then retired from public life. There are in print only three or four judgments delivered by him, either in the appellate court or the court of chancery. As far back as January 1853 he had been made a privy councillor in Ireland. He died at his residence, 26 Merrion Square South, Dublin, on 26 July 1874, and was buried at Tullow, co. Carlow, on 30 July. By his marriage in 1819 with Mary Ann, daughter of Robert Gray of Upton House, co. Carlow, who died in Dublin on 24 Nov. 1862, he had issue one son, Colonel William Bagenal Brewster, and one daughter, Elizabeth Mary, wife of Mr. Henry French, both of whom died in the lifetime of their father.

[Burke's Lord Chancellors of Ireland (1879), pp. 307–14; Illustrated London News (1874), lxv. 115, 427.] G. C. B.

BREWSTER, SIR DAVID (1781–1868), natural philosopher, was born at Jedburgh on 11 Dec. 1781. He was the third child and second son of James Brewster, rector of the grammar school of Jedburgh, his mother being Margaret Key, who is said to have been a very accomplished woman. She died at the age of thirty-seven, when David was only nine years old, but through his long life he retained a most affectionate memory of his mother. The motherless family fell to the charge of Grisel, the only sister, who appears to have discovered the genius of her second brother, and, the paternal rule being marked by much severity, the sister, who was but three years older than David, did her utmost by fond indulgence to spoil the boy.

It is recorded that David was never seen to pore over his books, but he always knew his lessons and often assisted his schoolfellows, keeping always a prominent place in his classes. There were four brothers, James, George, David, and Patrick [q. v.], who were all remarkable for their intelligence.

Among the citizens of Jedburgh when David Brewster was a boy were various men

of original character, scientific tendencies, and inventive genius. Chief among these was James Veitch, a self-taught man—astronomer and mathematician. From this man David Brewster received his first lessons in science. Veitch gave the boy many suggestive hints while he was engaged, when but ten years of age, in the manufacture of a telescope, which, in writing to a friend in 1800, he says had 'a greater resemblance to coffins or waterspouts than anything else.' In 1793, at the early age of twelve, David went to the university of Edinburgh, where he heard the lectures of Playfair, Robinson, Dugald Stewart, and others. The young scholar prepared for a position in the established church of Scotland, of which his father was a strenuous supporter. In 1802 Brewster, who had been for some time a regular contributor to the 'Edinburgh Magazine,' became its editor. In 1799 he engaged in tuition, becoming a tutor in the family of Captain Horsbrugh of Pirn in Peeblesshire, which situation he held until 1804. He wrote some love poetry to 'Anna,' a daughter of Captain Horsbrugh, who died at an early age, which was published in the 'Edinburgh Magazine,' and also printed in a separate form.

Having been licensed by the presbytery of Edinburgh, Brewster preached his first sermon in March 1804 in the West Kirk, before a large congregation, amongst whom were numbers of his fellow-students and many literary and scientific men. The Rev. Dr. Paul says of this effort: 'He ascended the pulpit, and went through the whole service, for a beginner, evidently under excitement, most admirably.' After this he preached frequently in Edinburgh, Leith, and elsewhere, and his ministrations were very successful, but they became a source of pain and discomfort to himself. He never preached without severe nervousness, which sometimes produced faintness. This weakness and the constant fear of failure led Brewster eventually to decline a good presentation and to abandon the clerical profession. In 1800 he was made an honorary M.A. of Edinburgh.

In 1804 he entered the family of General Diroon of Mount Annan in Dumfriesshire as tutor. There he remained till 1807, continuing his scientific studies and literary pursuits with but little interruption, as we find from his regular correspondence with Mr. Veitch. In 1805, on the resignation of Professor Playfair, Brewster was spoken of as a candidate for the chair of mathematics in the university of Edinburgh, and he received promises of support from Herschel and other well-known men of science. Mr. (afterwards Sir John) Leslie had the better claim to the chair, and was elected; but, owing to some unguarded expression in his work on the 'Nature and Propagation of Heat,' a cry of 'heresy' was raised. 'A Calm Observer' published a pamphlet professing to adopt 'a mode of discussion remote from personal invective.' This pamphlet, which created an intense excitement, was by David Brewster. In 1807 he became a candidate for the chair of mathematics in St. Andrews, but without success. He was, however, made LL.D. of Aberdeen University, and shortly after an M.A. of Cambridge; he was also elected a non-resident member of the Royal Society of Edinburgh. At this time he was induced to undertake the editorship of the 'Edinburgh Encyclopædia,' which occupied him for twenty-two years. In 1809 he visited London, and he left a diary minutely recording his experiences. Under 31 July 1810 we find 'Married, set off to the Trosachs,' the lady being Juliet, the youngest daughter of James Macpherson, M.P., of Belleville, better known as 'Ossian Macpherson.'

In 1813 Brewster sent his first paper to the Royal Society of London on 'Some Properties of Light.' In the same year he published a 'Treatise on New Philosophical Instruments.' Failing health indicated the necessity of repose from mental labour, and a continental tour was ordered by his medical advisers. In July 1814 he started for Paris, where he made the acquaintance of Biot, La Place, Poisson, Berthollet, Arago, and many other of the French celebrities of science.

Brewster also visited Switzerland, established friendships at Geneva with Prévost and Pictet, and made many important observations on the rocks and glaciers of the Alps. In 1814 he returned to work, with unabated ardour for experimental inquiry. This showed itself in a series of papers contributed to the Royal Society, most of them on the 'Polarisation of Light,' which were continued through several years. In addition he published many other memoirs in the 'Transactions of the Royal Society of Edinburgh.'

In 1815 Brewster became a fellow of the Royal Society, and the Copley medal was bestowed upon him. This was followed three years later by the Rumford medal, and subsequently by one of the Royal medals, in each case for discoveries in relation to the polarisation of light. In 1816 the French Institute awarded him half of the prize of three thousand francs given for the two most important discoveries in physical science made in Europe.

In this year Brewster invented the ka-

leidoscope, which he patented; but, from some defect in the registration of the patent, it was quickly pirated, and he never realised anything by it. His 'Treatise on the Kaleidoscope' was published in 1819.

The 'Edinburgh Magazine' was published from 1817 under the name of the 'Edinburgh Philosophical Journal,' and Brewster edited it in conjunction with Professor Jameson, the mineralogist, and afterwards alone, the name being again changed (1819) to the 'Edinburgh Journal of Science.' Not only was the number of papers published by Brewster at this period of his life remarkable, but the investigations which were required, and the discoveries—especially in the delicate subject of optics—which they recorded were in every way extraordinary. In 1813 he commenced to publish in the 'Philosophical Transactions' a communication 'On some Properties of Light,' and in the two succeeding years he furnished no less than nine papers on analogous subjects. After this the phenomena of double refraction engaged his attention, and his discoveries occupied several additional papers.

In 1820 Brewster became a member of the Institute of Civil Engineers in London. In 1821 he was active in founding the Royal Scottish Society of Arts, of which he was named director; and in 1822 he became a member of the Royal Irish Academy of Arts and Sciences. In this year he edited a translation of Legendre's 'Geometry,' and also four volumes of Professor Robinson's 'Essays on Mechanical Philosophy.' In 1823 he edited Euler's 'Letters to a German Princess,' writing copious notes and a life of the author. Between 1819 and 1829 he appears to have relaxed a little, but he wrote 'On the Periodical Colours produced by Grooved Surfaces;' he investigated 'Elliptic Polarisation by Metals,' 'The Optical Nature of the Crystalline Lens,' 'The Optical Conditions of the Diamond,' and 'The Colours of Film Plates.' Beyond these the only paper communicated to the Royal Society was one 'On the Dark Lines of the Solar Spectrum,' in which he was associated with Dr. John Hall Gladstone. In 1825 Brewster was made a corresponding member of the French Institute, and honours from all parts of the world were crowded upon him. There was never any long intermission in his researches. In 1827 he published his account of a new system of illumination for lighthouses, which led to a successful series of experiments under his direction in 1833.

In 1831 the British Association for the Advancement of Science was organised, chiefly by a few scientific men who assembled at the archiepiscopal palace near York, Brewster being among them. The first meeting was held in York, when 325 members enrolled their names. Brewster was especially active, and he strove most zealously to advance the long-neglected interests of science. In this year William IV sent to Brewster the Hanoverian order of the Guelph, and shortly afterwards an offer of ordinary knighthood followed, the fees, amounting to 109*l.*, being remitted.

Sir David Brewster's busy pen now produced his 'Treatise on Optics' (1831) in Lardner's 'Cabinet Encyclopædia,' a volume of 526 pages, in which every phenomenon connected with catoptrics or dioptrics known up to the time of its publication was described with remarkable clearness and precision. About the same time he wrote for Murray's 'Family Library' his 'Life of Sir Isaac Newton,' and his 'Letters on Natural Magic.' In 1855 he proved the correspondence between Newton and Pascal produced by M. Chasles to be a forgery. An accident arising through an explosion nearly robbed Brewster of his eyesight; but his sight was eventually restored.

In 1836 Brewster went to Bristol to attend the sixth meeting of the British Association, being the guest of Mr. Henry Fox Talbot at Laycock Abbey. Mr. Talbot was engaged on his earliest experiments on photography, and his explanations of his immature processes, and the inspection of even the imperfect pictures which he produced, were sufficient to create in Brewster's mind a strong desire to work on the chemistry of light. He never found the time required for the practice of the art, but he wrote on the subject, and in 1865 received a medal from the Photographic Society of Paris.

Brewster was in receipt of an annual grant from the government of 100*l.* In 1836 this was increased by an additional grant of 200*l.* a year. On 7 Dec. 1837 he received from the crown the gift of the principalship of the united college of St. Salvator and St. Leonard in the university of St. Andrews. This post he held till 1859. From that year till his death he was principal of Edinburgh university.

Brewster has published his 'Treatise on Magnetism' in the seventh edition of the 'Encyclopædia Britannica.' His labours were, however, interrupted by the illness of his wife. Her failing health caused him to remove her to Leamington, and leaving her in charge of a medical friend, he, with his daughter, attended the twelfth meeting of the British Association at Manchester, where he made the acquaintance of Dr. Dalton, which led

to his investigating the conditions of the eye on which colour-blindness or Daltonism depended. He published an article on the subject in the 'North British Review.'

In 1843 the conflict which had prevailed for ten years in the church of Scotland was brought to a close by 474 ministers retiring from the old church of Scotland, protesting against the grievances of church patronage. Brewster had taken part in every step of the 'long conflict,' as it was called; he signed the Act of Protest; with his elder brother he walked in the solemn procession which left St. Andrews Church on 18 May, and he attended every sitting of that first assembly of the Free church of Scotland. The prominent position taken by Brewster in this movement caused in 1844 proceedings to be commenced against him by the established presbytery of St. Andrews, aided by the university, to eject him from his chair. The case, however, was quashed in the residuary assembly because he had not signed the formal deed of demission.

For Professor Napier's 'Edinburgh Review' Brewster wrote twenty-eight articles. In 1844 the 'North British Review' was started under the editorship of the Rev. Dr. Welsh. Brewster became a regular and constant contributor. Professor Fraser, who was editor of the 'North British Review' in 1850 and the seven following years, says: 'He contributed an article to each number during the time I was editor, and in each instance, after we had agreed together about the subject, the manuscript made its appearance on the appointed day with punctual regularity;' and Professor Blaikie, who edited the 'Review' from 1860 to 1863, writes: 'Sir David Brewster was ever remarkable for the carefulness of his work, the punctuality with which it was delivered, never behind time, never needing to write to the editor for more time or more space—a model contributor in every way.'

On 27 Jan. 1850 Lady Brewster died and was laid to rest beneath the shade of the abbey ruins of Melrose. In April Brewster, with his daughter, went abroad for change of air and scene. He renewed his acquaintance with Arago, which had begun in 1814; he visited M. Gay-Lussac just before his death, and met the Swiss philosopher, M. de la Rive.

In 1851 he was president of the meeting of the British Association at Edinburgh. In his address he pleaded with much earnestness 'for summoning to the service of the state all the theoretical and practical wisdom of the country,' and for the extension of the advantages of education. 'Knowledge is at once the manna and the medicine of our moral being.' The pen of Brewster was singularly prolific. Between 1806 and 1868 he communicated no less than 315 papers on scientific subjects—most of them bearing upon optical investigations—to the transactions of societies, and to purely scientific journals. Beyond these he wrote seventy-five articles for the 'North British Review,' twenty-eight articles for the 'Edinburgh Review,' and five for the 'Quarterly Review.' The most lasting monument to his fame, however, will certainly be his beautiful investigations into the phenomena of polarised light. He shared also with Fresnel the merit of elaborating the dioptric system for the improvement of our lighthouses; and he divided with Wheatstone the merit of introducing the stereoscope, the lenticular instrument belonging especially to Brewster.

Besides the above he wrote in 1841 and 1846 'Martyrs to Science,' or lives of Galileo, Tycho Brahe, and Kepler; and in 1854 an answer to Whewell's 'Plurality of Worlds' entitled 'More Worlds than One, the Creed of the Philosopher and the Hope of the Christian.'

In 1860 he was appointed vice-chancellor of the university of Edinburgh, and in that capacity presided at the installation of Lord Brougham as chancellor. Brewster in this year became an active member of the National Association of Social Science, and was afterwards chosen as vice-president. In this year he was made M.D. of the university of Berlin. He was at this time a frequent visitor to London, taking the greatest interest in the scientific societies of that city. In 1864 he was appointed president of the Royal Society of Edinburgh. In the spring of that year he was attacked, while residing in Edinburgh, with one of his seizures of prostrating illness, from which, although he appeared to rally, he never entirely recovered.

The 'lighthouse controversy' was to Brewster, in his latter days, a source of annoyance. It was a great comfort to him when the council of the Inventors' Institute in 1864, after examining the merits of the investigations made by Fresnel and others, reported that the introduction of the holophotal system into British lighthouses was due to the persevering efforts of Brewster. In June of this year a neglected cold fell heavily on Brewster's aged frame, and rendered him so feeble that he could not walk far, or labour in his library, without great fatigue. This state continued until 1867, when 'he was unable to play his quiet game at croquet.' Believing himself to be a dying man, he gave instruction to a young

scientific friend, Mr. Francis Deas, as to the arrangement of his scientific instruments, and two years later he confided to this gentleman the completion of a paper 'On the Motion, Equilibrium, and Forms of Liquid Films.'

On 10 Feb. 1868 an attack of pneumonia and bronchitis exhibited symptoms which convinced Sir James Simpson that he could not live over the day. After a few hours of extreme languor, knowing all his loving watchers, with 'an ineffably happy, cheerful look, which seemed to come from a very fulness of content,' this bright intelligence passed quietly away at Allerby, Melrose.

In 1857 Brewster married for the second time Miss Jane Kirk Purnell of Scarborough, by whom he had a daughter, born 27 Jan. 1861.

R. H-T.

BREWSTER, Sir FRANCIS (*d.* 1704), Irish writer on trade, was a citizen and alderman of Dublin, and lord mayor of that city in 1674. He was M.P. in the Irish House of Commons for Tuam 1692–1703, and for Doneraile 1703–4. In February 1692–3 he gave evidence before the House of Commons on certain public abuses in Ireland, and in 1698 was appointed one of seven commissioners to inquire into the forfeited estates in Ireland. The commissioners disagreed among themselves, and only four of the seven signed the report; the other three, the Earl of Drogheda, Sir Richard Levinge, and Sir F. Brewster, refused because they thought it false and ill-grounded in several particulars. The dispute was brought before parliament, and Sir R. Levinge was committed to the Tower for slandering some of his colleagues. Brewster died in 1704.

Brewster was the author of 'Essays in Trade and Navigation. In Five Parts,' Lond. 1695, 12mo. The first part only was published; but in 1702 he issued 'New Essays on Trade, wherein the present state of our Trade, its great decay in the chief branches of it, and the fatal consequences thereof to the Nation (unless timely remedy'd), is considered under the most important heads of Trade and Navigation,' Lond. 12mo. The following anonymous book is also ascribed to him: 'A Discourse concerning Ireland and the different Interests thereof; in answer to the Exon and Barnstaple Petitions; shewing that if a Law were enacted to prevent the exportation of Woollen Manufactures from Ireland to Foreign Parts, what the consequences thereof would be both to England and Ireland,' Lond. 1698, 4to.

[Ware's Ireland (Harris), 1764, ii. 262; Burnet's State Tracts, 1706, ii. 709 seq.; Tindal's Continuation of Rapin's England, 1740, iii. 234, 398.]

C. W. S.

BREWSTER, JOHN (1753–1842), author, the son of the Rev. Richard Brewster, M.A., vicar of Heighington in the county palatine of Durham, was born in 1753, and received his education at the grammar school of Newcastle-upon-Tyne under the Rev. Hugh Moises, and at Lincoln College, Oxford, where he graduated B.A. in 1775, and M.A. in 1778. He was appointed curate of Stockton-on-Tees in 1776, and lecturer there in 1777. In 1791 he was presented to the vicarage of Greatham, which benefice he held until 1799, when he became vicar of Stockton through the patronage of Bishop Barrington. The same prelate afterwards successively preferred him to the rectories of Redmarshall in 1805, Boldon in 1809, and Egglescliffe in 1814, in which charges, according to the testimony of Surtees (*Hist. of Durham*, iii. 139), he was 'long and justly respected for the exemplary discharge of his parochial duties.' He died at Egglescliffe 28 Nov. 1842, aged 89.

His chief work was his 'Parochial History and Antiquities of Stockton-on-Tees,' published in quarto at Stockton in 1796. A second and enlarged edition was printed in 1829, octavo. His other works were: 2. 'Sermons for Prisons,' &c., 1790, 8vo. 3. 'On the Prevention of Crimes and the Advantages of Solitary Confinement,' 1790, 8vo. 4. 'Meditations of a Recluse, chiefly on Religious Subjects,' 1800, 12mo. 5. 'A Thanksgiving Sermon for the Peace,' 1802. 6. 'A Secular Essay, containing a View of Events connected with the Ecclesiastical History of England during the 18th Century,' 1802, 8vo. 7. 'The Restoration of Family Worship recommended, in Discourses selected, with alterations, from Dr. Doddridge,' 1804, 8vo. 8. 'Lectures on the Acts of the Apostles,' 1806, 2 vols. 8vo. 9. 'Of the Religious Improvement of Prisons, an Assize Sermon,' 1808. 10. 'Meditations for the Aged, adapted to the Progress of Human Life,' 1810, 8vo; four editions. 11. 'Meditations for Penitents,' 1813. 12. 'Reflections adapted to the Holy Seasons of the Christian and Ecclesiastical Year,' 12mo. 13. 'Reflections upon the Ordination Service,' 12mo. 14. 'Contemplations on the Last Discourses of our Blessed Saviour with His Disciples as recorded in the Gospel of St. John,' 1822, 8vo. 15. 'A Sketch of the History of Churches in England, applied

to the purposes of the Society for Promoting the Building and Enlargement of Churches and Chapels,' 1818. 16. 'An Abridgment of Cave's Primitive Christianity.' 17. 'Memoir of the Rev. Hugh Moises, A.M.;' privately printed in 1823, and reprinted in Nichols's 'Illustrations of Literature,' vol. v.

[Gent. Mag., May 1843, p. 538; Adamson's Newcastle School, 1846, p. 27; Nichols's Illustrations, v. 92; Nichols's Topographer and Genealogist, vol. ii. 1853; Allibone's Dict. of Lit.; Heavisides's Annals of Stockton, p. 14, who gives two curious anecdotes of Brewster's simplicity in being deceived by suppositious relics of antiquity.] C. W. S.

BREWSTER, PATRICK (1788–1859), Scotch divine, born on 20 Dec. 1788, was the youngest of the four sons of Mr. James Brewster, and younger brother of Sir David Brewster [q.v.] In accordance with the wishes of his father, who had destined all his sons to the ministry of the Scottish church, Patrick devoted himself to theology, and received license as a probationer from the presbytery of Fordoun on 26 March 1817. In August following he was presented by the Marquis of Abercorn to the second charge of the Abbey Church of Paisley, to which he was ordained on 10 April 1818. He continued to occupy this preferment for nearly forty-one years, and died at his residence at Craigie Linn, near Paisley, on 26 March 1859. Brewster was a favourite of the working classes, and received a public funeral (4 April 1859). In 1863 a monument to his memory was erected by public subscription in Paisley cemetery.

As a preacher Brewster enjoyed an almost unrivalled local fame. His political views were extreme; he was a 'moral-force chartist,' and took an active share in the plans for carrying out the chartist programme. His whole life was one continuous succession of exciting disputes upon public questions, or with the heritors, the parish authorities, or the presbytery. This polemical spirit may be traced in the volume of his sermons entitled 'The Seven Chartist and Military Discourses libelled by the Marquis of Abercorn and other Heritors of the Abbey Parish. To which are added four other Discourses formerly published, with one or two more as a Specimen of the Author's mode of treating other Scripture Topics. With an Appendix,' 8vo, Paisley, &c., 1843. Brewster advocated the abolition of the slave trade, the repeal of the corn laws, temperance, and a national system of education. He published three single 'Sermons,' 8vo, and a vindication, in two parts, of the rights of the poor of Scotland 'against the misrepresentations of the editor of the "Glasgow Post and Reformer."' He was also a contributor to the 'Edinburgh Cyclopædia,' and furnished a 'Description of a Fossil Tree found in a Quarry at Nitshill' to the ninth volume of the 'Transactions of the Royal Society of Edinburgh.' He incurred some odium for not, like his brothers, leaving the established church of Scotland at the time of the disruption in 1843, when he was one of 'the Forty.'

H. G.

BREWSTER, THOMAS, M.D. (*b.* 1705), translator, was the son of Benjamin Brewster of Eardisland, Herefordshire, and was born on 18 Sept. 1705. He was educated at Merchant Taylors' School, and thence elected to St. John's College, Oxford, in 1724. He graduated B.A. in 1727, M.A. in 1732, B.M. and D.M. in 1738. He was also elected a fellow of his college. While at Oxford he published a translation of the 'Second Satire of Persius,' in English verse by itself, to see, as he says in the preface, how the public would appreciate his work. This was in 1733. The third and fourth 'Satires' were published together in 1742, the fifth in the same year, and the six satires in one volume in 1784. Brewster, after leaving the university, practised medicine at Bath.

[Robinson's Merchant Taylors' School Register, ii. 56; Graduates of Oxford; Prefaces to different editions of the Satires; Brit. Museum Catalogue.] A. G-N.

BREWSTER, WILLIAM (1560?–1644), one of the chief founders of the colony of Plymouth, New England, was possibly a native of Scrooby, Nottinghamshire. According to the 'Memoir' by Bradford, he was at the time of his death in his eightieth year, but Morton, secretary of the colony, states that he was eighty-four at his death, so that he was probably born in 1560. It has been conjectured that his father was either William Brewster, who was tenant at Scrooby of Archbishop Sandys, or Henry Brewster, vicar of Sutton-cum-Lound, or James Brewster, who succeeded Henry. The coat-of-arms preserved in the Brewster family in America is identical with that of the ancient Suffolk branch. Bradford states that Brewster, after obtaining some knowledge of Latin and some insight into Greek, spent a short time at the university of Cambridge. He matriculated from Peterhouse in the year 1580, but subsequently failed

to graduate. On leaving the university, Brewster, probably in 1584, entered the service of William Davison [q.v.], ambassador, and afterwards secretary of state of Queen Elizabeth, who, according to Bradford, found him 'so discreet and faithful, that he trusted him above all others that were with him.' He accompanied Davison in his embassy to the Low Countries in 1585, and remained in his service till his fall in 1587.

The information supplied by Bradford regarding the immediately succeeding period of Brewster's life is comprised in the general statement that he 'retired to the country,' where he interested himself 'in promoting and furthering religion' by procuring good preachers 'in all places thereabouts.' Possibly he owed the bent towards ecclesiastical matters to his intimacy with two favourite pupils of Hooker—George Cranmer, also one of Davison's assistants, and Sir Edwyn Sandys, afterwards governor of Virginia. The part of the country to which Brewster retired was identified by Joseph Hunter (*Collections concerning the Early History of the Founders of New England*) as Scrooby, Nottinghamshire. Hunter has further modified the information of Bradford by discovering, from an examination of the post-office accounts, that from April 1594, or earlier, to September 1607, Brewster filled the office of 'post,' that is, keeper of the 'post office,' at Scrooby, a station on the great north road between Doncaster and Tuxford. Such an office was then one of considerable importance, and was not unfrequently held by persons of good family. It implied the superintendence of the despatch of mails to the various side stations, the supplying of relays of horses, and the providing of entertainment for travellers. While holding this office Brewster occupied Scrooby Manor, a possession of the archbishop of York, where royal personages had more than once resided, and Cardinal Wolsey after his dismissal had passed several weeks. His salary was 20*d.* per diem until in July 1603 it was raised to 2*s.* It was at Scrooby Manor that Brewster 'on the Lord's day entertained with great love' the company of Brownists or Separatists presided over by Clifton. Much of the progress of the movement was owing to his zeal and his influence, his social position being undoubtedly higher than that of the other members of the community. After they 'had been about a year together,' the threat of persecution made them resolve in 1607 to remove to Holland, but the skipper in whose sloop they embarked at Boston having betrayed them, they were apprehended, and Brewster as one of the principal leaders of the movement was imprisoned and bound over to the court of assize. In the summer of the following year they were more successful, and, having set out from Hull, reached Amsterdam in safety. In 1609 they removed to Leyden, where Brewster, 'having spent most of his means,' employed himself in 'instructing students at the university, Danes and Germans, in the English language.' He 'prepared rules or a grammar after the Latin manner' for the use of his scholars. By the help of some friends he also set up a printing-press, and so 'had employment enough by reason of many books which would not be allowed to be printed in England' (for list of principal works printed by him see Steele's *Life of Brewster*, pp. 172–174). In 1619 inquiry was instituted by the authorities regarding his publications, but he was then absent in London negotiating about a grant of land in Virginia. Through the assistance of his friend Sir Edwyn Sandys a patent for a tract of land within that colony was finally granted, and Brewster, with Bradford [see Bradford, William, 1590–1657], as the chief leaders of the enterprise, set sail in September 1620 with the first company of 'pilgrims' in the Mayflower. In the church at Leyden he had acted as ruling elder, and he discharged the same duties in the church at New Plymouth. As no regular minister was appointed until 1629, he up to this time also acted as teacher and preacher, officiating twice every Lord's day. During the early difficulties of the colony he conducted himself with untiring cheerfulness. He was charitable to others, and his own personal habits were frugal. He drank nothing but water until the last five or six years of his life. Bradford gives the date of his death as 18 April 1643, but Morton, secretary of the colony, entered the date in the church records as 'April 10th 1644,' and various other circumstances confirm this entry. He had four sons and four daughters. He left a library of 300 books valued at 43*l.*, the catalogue of which is preserved in the records of the colony, and an estate valued at 150*l.* His sword is preserved in the cabinet of the Massachusetts Historical Society.

Young in Chronicles of the Pilgrims, 1841, and printed also in the collections of the Massachusetts Historical Society, 5th ser. iii. 408–14; Hunter's Collections concerning the History of the Early Founders of New Plymouth, 2nd ed. 1854; Steele's Life of William Brewster, 1857; Savage's Genealogical Dictionary of the First Settlers in New England, i. 245–6; Belknap's American Biography, ii. 252 6.] T. F. H.

BRIAN (926–1014), king of Ireland, known in Irish writings as Brian Boroimhe (*Cogadh Gaedhel re Gallaibh*, Rolls Series, p. 208), Boroma ('Tigernachi Annales' in *Bodleian MS.* Rawlinson B 488), most commonly in earlier books as Brian mac Cennedigh (*Book of Leinster*, facsimile, fol. 309 *a*; TIGERNACH, ed. O'Conor, pp. 266, 268), and in English writings as Bryan mac Kennedy and Brian Boru, was a native of the northern part of Munster, and was of the royal descent of Thomond, of the family known as Dal Cais, who claimed the right of alternate succession to the kingship of Cashel, as the chief kingship of Munster is usually called by the Irish writers. His father was Cenneide, son of Lorcan, and Brian, who was born in 926, was the youngest of three sons. The time of Brian's youth was one of continued harrying of Ireland by the Danes, whose hold on the seaports of the country had been steadily increasing since their first invasion in 795, and from Limerick they made many plundering expeditions into the country of the Dal Cais. Brian's elder brother Mathgamhain became head of the tribe, and under him Brian's life as a warrior began; but when Mathgamhain made peace Brian continued the war by expeditions from the mountains of Clare, but was unable to make way against the Danes, and at last, with only a few followers left, had to take refuge with his brother. The war soon began again, and Mathgamhain succeeded in seizing Cashel and the vacant kingship of Munster. The Danes of Limerick with many native Irish allies marched against the king of Cashel and his brother, and were defeated at Sulcoit in Tipperary. This battle, fought about 968, was the first of Brian's victories over the Danes, and was followed by the sack of Danish Limerick. In 976 a conspiracy of rival chiefs in Munster led to the murder of Mathgamhain, and Brian became chief of the Dal Cais with an abundant inheritance of wars. Succession to the kingship of Cashel was alternate between the Dal Cais and the Eoghanacht, that is between the tribes north of the plain in the middle of which the rock of Cashel rises and those south of it. Maelmuadh, Mathgamhain's murderer, was the next heir of the Eoghanacht, and became king after the murder. Brian defeated and slew him in a pitched battle at Belach Lechta, in the north of the present county Cork, in 978, and thus himself became king of Cashel. He had, however, much hard fighting before he was able to obtain hostages, in proof of submission, from all the tribes of Munster. Constant warfare made the Dal Cais more and more formidable, and having obtained recognition throughout Munster, Brian first led them against Gillapatric, king of Ossory, and then marching into Leinster was, in 984, acknowledged as king by its chiefs. His successes had evidently determined him to extend his sway over as much of Ireland as he could.

Brian sailed up the Shannon from his stronghold at Killaloe, and with varying success ravaged Meath, Connaught, and Breifne, and at length entered into an alliance with Maelsechlainn mac Domhnaill, chief king of Ireland. The Leinstermen with the Danes of Dublin rose against Brian in the year 1000, and, with the help of the king of Ireland, he defeated them with great slaughter at Glenmama in Wicklow, and immediately after marched into Dublin. Sitric the Danish king submitted to Brian, who took a Danish wife and gave an Irish one to Sitric. He now thought himself powerful enough to end his alliance with Maelsechlainn, and sent a body of Danes into Meath towards Tara. Tara had long been an uninhabited green mound, as it is at this day, and its possession was only important from the fact that it was associated with the name of sovereignty and with the actual possession of the rich pastures by which it is surrounded. Maelsechlainn defeated the first force sent against him, but Brian advanced at the head of an army of Munstermen, Leinstermen, Ossorymen, and Danes, and Maelsechlainn retired to his stronghold of Dun na Sciath on Loch Ennell, and sent for help to his natural allies, Aedh, king of Ailech, and Eochaidh, king of Uladh, and to Cathal, king of Connaught; but all in vain, and he was obliged to offer hostages to Brian. Thus, in the eyes of the Irish, Brian became chief king of Ireland, and the Clonmacnois historian, Tigernach, has at the end of the year 1001 the entry 'Brian Borama regnat' (*Bodleian MS.* Rawlinson B 488, fol. 15 *b*, col. ii. line 31). He next made war on the west, received submission from the Connaughtmen, and was thus actual lord of Ireland from the Fews mountains in Armagh southwards. The men of western and central Ulster under the king of Ailech, and those of Dalriada and Dalnaraide under the king of Uladh, still resisted him, but they were also at war with one another, and in 1004 met in battle at Craebh Tulcha and were both slain. Brian at once marched through Meath to Armagh, where he made an offering of gold upon the altar of the great church and acknowledged the ecclesiastical supremacy of Armagh in the only charter of his, the original of which has survived to our day. The charter is in the handwriting of Maolsuthain, Brian's confessor, and is on fol. 16 *b* of the 'Book of

Armagh.' The book itself, written on vellum about 807 by Ferdomnach, contains the gospels, a life of St. Patrick, and other compositions, some in Latin and some in Irish, and in 1004 was already considered one of the chief treasures of Armagh. Its subsequent history has been carefully traced, and it is now preserved in the library of Trinity College, Dublin. On the back of the sixteenth leaf of the 'Book of Armagh' is part of the life of St. Patrick with an account of grants of land in Meath made to him and to his disciples and their successors by Fedelmid mac Loiguire, king of Ireland. The writing is in two columns, and at the foot of the second the original scribe had left a blank, in which the charter of Brian was appropriately written. Maolsuthain wrote in Latin, translating his own name into Calvus Perennis, and Cashel into Maceria. 'St. Patrick,' says the charter, 'when going to heaven, ordained that the entire produce of his labour as well as of baptism, and decisions as of alms, was to be delivered to the apostolic city, which in the Scotic tongue is called Arddmacha. Thus I have found it in the records of the Scots. This is my writing, namely Calvus Perennis, in the presence of Brian, imperator of the Scots, and what I have written he decreed for all the kings of Maceria.' This grant, besides its intrinsic interest, is of importance as confirming the accuracy of the early chronicles which mention Brian's visit to Armagh. He received hostages from all the chief tribes of the north except the Cinel Conaill, who remained unconquered in the fastnesses of Kilmacrenan and the Rosses. His next action was to make a circuit of Ireland demanding hostages of all the territories through which he passed. This was probably suggested by a similar act of Muircheartach na gcochall gcroicionn, king of Ailech, who in 941 marched from the north through Munster taking hostages to secure his own succession to the chief kingship of Ireland.

The poem which Cormacan mac Maolbrighde, Muircheartach's bard, composed in honour of his exploit mentions (ed. O'Donovan, line 129) that the king of Ailech on his expedition passed a night at Cenn Coradh, Brian's home, and even if Brian did not witness the progress of the northern king, its memory must have been fresh in Munster in his youth. Cenn Coradh was near Killaloe, within the limits of the present town, and starting thence Brian marched up the right bank of the Shannon and northwards as far as the Curlew mountains, which he crossed and descended to the plain of the river Sligech, which falls into Sligo Bay, and then marched by the sea to the river Drobhais, then as now the boundary of Ulster. Brian forded it and followed the ancient road into the north over the ford of Easruadh, the present salmon leap on the river between Loch Erne and Ballyshannon. From this he marched to the gap called Bearnas mor, probably keeping to the coast. He passed unattacked through the long and desolate defile, and beyond it emerged into Tir Eoghain, which he crossed, and entered Dalriada by the ford of the Ban at Feartas Camsa, near the present Macosquin. He passed on into Darnaraidhe and ended his circuit at Belach Duin, a place in Meath, three miles north of Kells.

He was thus, by right of his sword and admission of all her chiefs, Ardrigh na Erenn, chief king of Ireland, and so remained till his death. After so much war there was an interval of peace. Brian is said by the historians of his own part of the country to have built the church of Killaloe and that of Inis Cealtra, and the round tower of Tomgraney; but the ruins on the island in Loch Derg, and the ancient stone-roofed church of Killaloe, are later than the buildings erected by him. He himself lived in the Dun of Cenn Coradh, probably in a house resembling the dwellings of the peasantry of the present day, with an earthen floor, thatched roof, and a hearth big enough to boil a huge cauldron, whence the king and his guests drew out lumps of meat, which they washed down with draughts of the beer which, tradition says, they had learnt to brew from their Danish friends, and of the more ancient liquor of the country made from honey. Senachies, historians who knew how to turn history into poetry, and who like poets often excelled in fiction, were the men of letters of Brian's court. They feasted with the king and his warriors, and sang the glories of the Dal Cais and the great deeds of Brian, son of Cenneide, in strains some of which have come down to our own times. It was perhaps one of these who first gave Brian the name by which in modern times he has become the best known of all the kings of Ireland; few Englishmen can, indeed, name any other. Borama (*Book of Leinster*, facs. 294 *b*) na boromi (*Leabhar na Huidri*, facs. 118 *b*), a word cognate with *φόρος* (STOKES, *Revue Celtique*, May 1885, p. 370), is an Irish word for a tribute, resembling the indemnity of modern warfare, as distinguished from *cáin* and *cis*, or rightful dues and taxes payable according to fixed usage. Thus, in the 'Annals of Ulster' under 998 A.D.: 'Indred loch necach la haedh mac domhnaill co tuc boroma mor as' (Plundering of Loch Neagh by Aedh mac Domhnaill, and he took a boroma thence);

and A.D. 1008: 'Creach la Flaithbertach ua Neill co firu Breagh co tuc boromamor' (A foray by Flaithbertach O'Neill on the men of Bregia, and he took a great boroma). *Eric* has part of the same meaning, and the statement of the most famous borama begins: *Isi seo imorro innéraic*, this is, moreover, the eric (*Book of Leinster*, facs. 295 *b*, line 20). This was an annual tribute which the Leinstermen had in early times been forced to pay to the kings of Tara. It consisted, according to the 'Book of Leinster,' of 15,000 cows, 15,000 pigs, 15,000 linen cloths, 15,000 silver chains, 15,000 wethers, 15,000 copper cauldrons, 1 huge copper cauldron capable of holding 12 pigs and 12 lambs, 30 white cows with red ears, with calves of the same colour and trappings, and its payment was often refused and led to endless wars. It has often been supposed that Brian received his cognomen because he put an end to this tribute by subduing the king of Tara; but there is no passage in early historians justifying this statement. As Brian is called Boroma by Tigernach O'Braoin, a writer who lived in the middle of the eleventh century (the existing fragmentary manuscript of his history being of about the year 1150), it is clear that the title was a real one, given him during his life. But Brian was throughout life a taker and not a refuser of tributes. No one who has read the Irish chronicles could think it likely that a hero of the Dal Cais would care to be celebrated as a reliever of the burdens of the Leinstermen, first his enemies, and then his subjects. Brian was called Boroimhe or Brian of the Tribute, because of the tribute which he had levied throughout Ireland, and which brought plenty to the Dal Cais, but was taken from the Leinstermen, the Connaughtmen, the men of Meath, and of Ulster, with as firm a hand as ever the most famous borama was seized from the descendants of Eochu mac Echach by the kings of Tara.

In 1013 fighting began again between the Danes of Dublin, who found allies in Ossory and Leinster and Maelsechlainn. The king of Meath was worsted and sent to ask help from Brian, who ravaged Ossory and Leinster and joined Maelsechlainn at Kilmainham near Dublin, where some remains of an old earthwork at Garden Hill have been conjectured to mark their encampment. They besieged the Danes from 9 Sept. till Christmas, but then had to raise the siege. In the spring Brian again marched against the Danes, who, besides allies from Leinster, had obtained help from Scandinavia. He wasted Leinster and marched to the north side of Dublin. On Good Friday, 23 April 1014, at Cluantarbh, on the north side of Dublin Bay, a decisive battle was fought, in which the Danes were routed with great slaughter. Brian's sons, Murchadh and Donchadh, and his grandson led the Irish, and Brian himself, too old for active fighting, knelt in his tent, repeating psalms and prayers. Here he was slain by Brodar, a Danish jarl.

The victory was the most important the Irish had ever won over the Danes, and the Danes were never after powerful in Ireland beyond the walls of their boroughs. The battle was celebrated in poetic accounts full of dramatic details, both by the Irish and the Northmen, sometimes natural as in the saga where a fugitive stops to fasten his shoe: 'Why,' says a pursuing Irishman, 'do you delay?' 'I live,' answers the fugitive, 'away in Iceland, and it is too late to go home tonight.' Or sometimes supernatural, as in the Irish tale, where Aibhell of Craig Liath, the bensidh of the Dal Cais, warns Brian the night before the battle of his approaching death. The Irish chronicler (Cogadh G. re G.) describes the battle in alliterative prose, sometimes breaking into verse, as does the English chronicler in celebrating Brunanburh. In the case of Cluan Tarbh, as probably in that of Brunanburh, it was the nearness and actual living fame of the event that made the historian become a poet, and not distance of time that caused history to become inextricably blended with romance. Brian was carried to Armagh and there buried. His tomb is forgotten, and his power died with him. Two sons, Tadhg and Donnchadh, survived him, while his son Murchadh and his grandson Toirdelbhach were slain in the battle. His clansmen returned to Cenn Coradh, and Maelsechlainn mac Domhnaill again reigned as chief king of Ireland, and so continued till his death. Brian had raised the power of the Munstermen to a pitch it had never reached before, and his fifty years of war wore out the Danish strength; but his efforts to obtain supremacy in Ireland diminished the force of hereditary right throughout the country, and suggested to willing chiefs that submission should only be yielded to him who could exact it. The last chief king of Ireland of the ancient line was the Maelsechlainn whom Brian had for a time dispossessed, and when he died in 1022 no king of Tara was ever after able to enforce even the slight general control exercised in former times, and the king James, who united the rule of England and Scotland, was the next real king of the whole of Ireland. The fame of Brian Boroimhe has been spread throughout Ireland by Dr. Geoffrey Keating, whose interesting 'Forus feasa air Eirinn' was the most popu-

lar of all Irish histories from its appearance in the seventeenth century till the time when Irish literature ceased to be read at all in the country about the year of the famine. The book was written in Munster, and therefore praises the most famous of her heroes. In later days still, from the time of Daniel O'Connell downwards, the renown of Brian has been spread more and more. 'For it was he that released the men of Erin and its women from the bondage and iniquity of the foreigners and the pirates. It was he that gained five-and-twenty battles over the foreigners, and who killed and banished them as we have already said.' These words of the old Munster chronicler, who wrote all the praise he could of the popular hero of the south, represent the spirit in which Brian has been extolled in modern times. He has been often praised in books and speeches as an enlightened patriot, a compeer of King Alfred and of Washington. In the chronicles of his own times this is not his aspect; he there appears as a strong man and a hardy warrior, skilful in battle and in plotting, proud of his ancestors and of his tribe, and determined that the Dal Cais should be the greatest tribe in Ireland, the tribe with the most cattle and the most tribute. Such was Brian, son of Cenneide, for whom no fitter title could be found than that of Boroimhe, of the tribute, the main object of so many of his battles.

[Original Charter in Book of Armagh, 16 *b*, reproduced in facs. in National Manuscripts of Ireland, vol. i.; date of the charter 1004. Tigernachi Annales; Photograph of Bodleian MS. Rawlinson B 488; and in O'Conor's Rerum Hibernicarum Scriptores, vol. i.; Tigernach wrote before 1088, manuscript in Bodleian of about 1150. Cogadh Gaedhil re Gallaibh, The War of the Irish with the Danes, Rolls Series, and Book of Leinster facsimile fol. 309. The Book of Leinster is a twelfth-century manuscript; only a fragment of the work remains in it, the rest of the Rolls text being from late manuscripts, the general accuracy of which is confirmed by independent evidence. BRIANT. [See BRYAN.]

BRIANT, ALEXANDER (1553–1581), Jesuit, was born in Somersetshire in 1553, and in 1574 became a member of Hart Hall, Oxford. Having been converted to the catholic religion, he passed over to the English college of Douay, which shortly afterwards removed to Rheims; was ordained priest in 1578, and was sent back to the English mission in 1579. He laboured in his native county, where he reconciled the father of Robert Parsons, the Jesuit, to the catholic church. His career was very brief. He was seized by a party of pursuivants who were really in search of Father Parsons, on 28 April 1581, and carried off to the Compter prison in London, whence he was transferred to the Tower. Cardinal Allen says 'he was tormented with needles thrust under his nails, racked also otherwise in cruel sort, and specially by two whole days and nights with famine, which they did attribute to obstinacy, but indeed (sustained in Christ's quarrel) it was most honourable constancy' (*Modest Defence of English Catholicks*, 11). Briant was also subjected to the horrible torture of the instrument nicknamed 'the scavenger's daughter.' Norton, the rack-master, who boasted that he would stretch Briant a foot longer than God had made him, was afterwards called to account by his employers for his excessive cruelty. From his cell Briant addressed a letter to the Jesuit fathers in England begging the favour of admission to the society, and his request was acceded to. On 16 Nov. 1581 he was tried in the queen's bench at Westminster, with six other priests, and condemned to death for high treason under the 27th of Elizabeth. He suffered at Tyburn with Father Edmund Campion and the Rev. Ralph Sherwin, on 1 Dec. 1581. He was a young man of singular beauty, and behaved with great intrepidity at the execution. 'His quarters were hanged up for a time in public places' (Wood, *Athenæ Oxon.* ed. Bliss, i. 480). There is an engraved portrait of him. His letter to the English Jesuits is printed in Foley's 'Records,' iv. 355–358.

BRICE, ANDREW (1690–1773), printer, son of Andrew Brice, shoemaker, was born at Exeter in 1690, and was intended by his friends to be trained up as a dissenting minister, but when he was seventeen years old their want of resources forced him to think of another pursuit. He became a printer, apprenticing himself for five years to a tradesman in his native city named Bliss. Long before the term of service expired the apprentice married, and as he found himself in a year or two unable to support his family he enlisted, with the object of cancelling his indentures. His friends soon obtained his discharge, and helped him to commence business on his own account in 1714, though with such slender materials that he had but one size of type for all his work, including the printing of a weekly newspaper. About 1722 the debtors in the city and county prisons induced him to lay their grievances before the public, with the result that he found himself entangled in a lawsuit and cast in damages which he could not discharge. For seven years he remained under restraint, and was consequently supplied with sufficient leisure for the composition of an heroi-comic poem in six cantos, entitled 'Freedom, a poem written in time of recess from the rapacious claws of bailiffs and devouring fangs of gaolers, by Andrew Brice, printer. To which is annexed the author's case,' 1730, the profits arising from which, it is pleasant to learn, were sufficient to secure his release. Soon after he published a collection of stories and poems with the title of 'Agreeable Gallimaufry, or Matchless Medley.' About 1740 Brice set up a printing business at Truro in addition to that at Exeter, but soon closed it. His disposition was mirthful, and he was a great patron of the stage. In 1745, when the players were being persecuted at Exeter, he published a poem defending their conduct and attacking the methodists, to which he gave the name of 'The Play-house Church, or New Actors of Devotion.' His dramatic tastes and his charitable feelings constantly involved him in pecuniary difficulties and obliged him to prosecute his trade until he was the oldest master printer in England. By this time he was left without wife or children, and he parted with his business for a weekly annuity and retired to a country house near Exeter. He died on 7 Nov. 1773, and his body lay in state in an inn at Exeter, every person who came to see it paying a shilling to defray the cost of the funeral. As Brice was the oldest freemason in England, three hundred members of that body followed him to the grave in Bartholomew churchyard on 14 Nov. His books were sold in the following year. There are two portraits of him, one in quarto; the other, engraved by Woodman from a painting by Jackson, an oval, was published in 1774.

Brice's weekly newspaper lasted from about 1715 until his death. In the number for 2 June 1727 appeared the first part of the familiar dialect-dialogue of 'The Exmoor Scolding,' and the second part was printed in the issue for 25 Aug. 1727. This piece has often been printed with the addition of 'An Exmoor Courtship.' Brice was not its author, but he finished the 'Courtship' and edited the first and several other editions. Davidson, in his 'Bibliotheca Devoniensis,' assigns to him the authorship of 'A Humorous Ironical Tract' called 'A Short Essay on the Scheme lately set on foot for lighting and keeping clean the Streets of the City of Exeter, demonstrating its pernicious and fatal effects,' 1755. In 1738 he wrote the 'Mobiad, or Battle of the Voice, an heroi-comic poem, being a description of an Exeter election,' but it was not printed until 1770, when he styled himself on the title-page 'Democritus Juvenal, Moral Professor of Ridicule, and Plaguy Pleasant Professor of Stingtickle College, vulgarly Andrew Brice, Exon.' His great work, begun in 1746 and finished in 1757, was the 'Grand Gazetteer, or Topographic Dictionary,' published in 1759. Its composition was a task of great labour; some parts, particularly the descriptions of Exeter and Truro, are very racy. Among the volumes issued from his press were the 'History of Cornwall,' by Hals, and Vowell's 'Account of the City of Exeter.'

BRICE or BRYCE, EDWARD (1569?–1636), first presbyterian minister in Ireland, was born at Airth, Stirlingshire, about 1569. He is called Bryce in the Scottish, Brice in the Irish records. His descendants claim that he was a younger son of Bruce, the laird of Airth, but there is no confirmation of this story in M. E. Cumming Bruce's elaborate pedigree of the Bruces of Airth, in 'The Bruces and the Cumyns,' 1870. He entered the Edinburgh University about 1589, and studied under Charles Ferme (or Fairholm).

Brice laureated 12 Aug. 1593; Reid says he became a regent, but his name is not in the Edinburgh list; Hew Scott, probably following Reid, makes him regent of some university, but leaves the place blank. On 30 Dec. 1595 he was admitted by the Stirling presbytery to the parochial charge of Bothkenner. He was translated to Drymen on 14 May 1602, and admitted on 30 Sept. by the Dumbarton presbytery. At the synod of Glasgow on 18 Aug. 1607 he bitterly opposed the appointment of the archbishop as permanent moderator, in accordance with the king's recommendation, adopted by the general assembly at Linlithgow on 10 Dec. 1606. Persecution, and, as it may appear, another reason, drove him to Ulster. On 29 Dec. 1613 Archbishop Spottiswood and the presbytery of Glasgow deposed him for adultery. Robert Echlin, bishop of Down and Connor, probably believed him innocent, for he admitted him to the cure of Templecorran (otherwise known as Ballycarry or Broadisland), near the head of Lough Larne, co. Antrim. The date given is 1613; it was perhaps 1614, new style. Brice was attracted to this locality by the circumstance that William Edmunstone, laird of Duntreath, Stirlingshire, who had joined in the plantation of the Ards, co. Down, in 1606, was now at Broadisland, having obtained a perpetual lease of 'the lands of Braidenisland' on 28 May 1609. The tradition is that Brice preached alternately at Templecorran and Ballykeel, Islandmagee. In September 1619 Echlin conferred on him the prebend of Kilroot. The 'Ulster Visitation' of 1622 says that Brice 'serveth the cures of Templecorran and Kilroot—church at Kilroot decayed—that at Ballycarry has the walls newly erected, but not roofed.' In 1629 Brice, who had reached his sixtieth year, is described as 'an aged man, who comes not much abroad;' and in 1630, though present on a communion Sunday at Templepatrick, he was unable to preach as appointed. Accordingly Henry Calvert (or Colwort), an Englishman, was 'entertained by the godly and worthy Lady Duntreath, of Broadisland, as an helper' to Brice. But the engagement was of no long continuance, for in June 1630 Calvert became minister of Muckamore (or Oldstone), co. Antrim. Probably Brice's infirm state of health saved him from being deposed, with his neighbours of Larne and Templepatrick, in 1632, for non-subscription to the canons. On Echlin's death, 17 July 1635, Leslie was consecrated in his stead. He held his primary visitation at Lisburn in July 1636, and required subscription from all the clergy. Brice and Calvert were among the five who refused compliance. A private conference with the recreant five produced no result, and though on 11 Aug. Leslie made two concessions to the presbyterians, viz. that in reading the common prayer they might substitute for its renderings of scripture 'the best translation ye can find,' and might omit the lessons from the Apocrypha, and read from Chronicles, Solomon's Song, and Revelation, the subscription was still refused. Accordingly on 12 Aug. sentence of perpetual silence within the diocese was passed, Brice, probably as the oldest, being sentenced first. Brice survived the silencing sentence but a very short time. He does not seem to have joined the Antrim 'meeting' or presbytery, and the presbyterians appointed no regular successor to him till 1646. His tombstone at the ruined church of Ballycarry says that he 'began preaching of the gospel in this parish 1613, continuing with quiet success while 1636, in which he dyed, aged 67, and left two sons and two daughters.' His eldest son, Robert, acquired a fortune at Castlechester, then the point of departure for the Scottish mail; pennies are extant with his name, dated Castlechester, 1671. For his descendants, the Brices of Kilroot, see Reid, and Burke's 'Landed Gentry,' 1863, p. 169. Within this century his lineal descendant resumed by royal license the name of Bruce.

Killen), 1867, i. 98, 115, 188, 196 seq., 521 seq.; Ware's Works (ed. Harris), 1764, i. 208; Adair's True Narrative (ed. Killen), 1866, pp. 1, 20, 58; Porter, in Christian Unitarian, 1863, p. 16 seq.; Bruce, in Christian Moderator, 1826, p. 312.] A. G.

BRICE, THOMAS (*d.* 1570), martyrologist, was engaged early in Queen Mary's reign in bringing protestant books 'from Wesel into Kent and London. He was watched and dogged [by the government], but escaped several times' (Strype, *Cranmer*, 511). On 25 April 1560 he was ordained deacon, and on 4 June following priest, by Edmund Grindal, then bishop of London (Strype, *Grindal*, 58, 59). He was the author of 'A Compendious Register in Metre conteinyng the names and pacient suffrynges of the membres of Jesus Christ, afflicted, tormented, and cruelly burned here in Englande since the death of our late famous kyng of immortall memorie Edwarde the sixte, to the entrance and beginnyngn of the reigne of our soveraigne and derest Lady Elizabeth of England, France, and Ireland, quene defender of the Faithe, to whose highnes truly and properly apperteineth, next and

immediately vnder God, the supreme power and authoritie of the Churches of Englande and Ireland. So be it. Anno 1559.' The dedication is addressed to the Marquis of Northampton. The 'Register of Martyrs' extends from 4 Feb. 1555 to 17 Nov. 1558, and consists of seventy-seven six-line doggerel stanzas. Foxe clearly found the 'Register' of use to him in the compilation of his 'Acts and Monuments.' A fine religious poem entitled 'The Wishes of the Wise,' in twenty verses of four lines each, concludes the work. The original edition was printed by Richard Adams, and he was fined by the Stationers' Company for producing it without license. Another surreptitious edition appears to have been issued about the same time, but of that no copy has survived. A second edition was 'newly imprinted at the earnest request of divers godly and well-disposed citizens' in 1597. Several extracts from the book appear in the Parker Society's 'Devotional Poetry of the Reign of Elizabeth' (161, 175), and the whole is reprinted in Arber's 'Garner,' iv. 143 et seq. Two other books are assigned to Brice in the Stationers' Registers, but nothing is now known of either of them. The first is 'The Courte of Venus moralized,' which Hugh Singleton received license to print about July 1567; the second is 'Songs and Sonnettes,' licensed to Henry Bynnemon in 1568. In 1570 John Allde had license to print 'An Epitaphe on Mr. Brice,' who may very probably be identified with the author of the 'Register.'

[Corser's Collectanea Anglo-Poetica (Chetham Soc.); Arber's Transcripts of the Stationers' Registers, i. 101, 343, 359.] S. L. L.

BRICIE, BRICIUS, or BRIXIUS (*d.* 1222), bishop of Moray, was a cadet of the noble house of Douglas, his mother being sister to Friskinus de Kerdal of Kerdal on the river Spey. He was the second prior of Lesmahagow, and in 1203 was elevated to the bishopric of Moray. His application to Pope Innocent III caused the cathedral of the see to be fixed at Spynie. He also founded the College of Canons. He is said to have attended a council at Rome in 1215. He died in 1222 and was buried at Spynie. According to Dempster he was the author of 'Super Sententias' and of 'Homiliæ.'

[Dempster's Hist. Eccles. Gent. Scot. ii. 183; Chronica de Mailros (Bannatyne Club), 1835; Registrum Episcopatus Moraviensis (Bannatyne Club), 1837; Keith's Scottish Bishops.] T. F. H.

BRICMORE, BRICHEMORE, or BRYGEMOORE, H—— (14th cent.), surnamed **Sophista**, an obscure scholastic of the fourteenth century, is stated to have lived at Oxford, and to have written commentaries on some of the works of Aristotle (Leland, *Commentarii de Scriptoribus Britannicis*, cap. cccIvi. p. 340). He is probably the same person with Brichemon, of whom Leland gives a very similar description (cap. dxiii. p. 429); at least the identification has been handed down from Bale, x. 89, and Pits, append. 41, p. 828, to Tanner (*Bibl. Brit.* p. 124). That Bricmore had a certain celebrity in his day is shown by the fact that some 'Notulæ secundum H. Brygemoore' appear in a manuscript of Corpus Christi College, Oxford, ccxxx. f. 33 (Coxe, *Catal.* ii. 93 *b*) in connection with extracts from Walter Burley and others of the great schoolmen. The only account of his life is contained in Dempster (*Historia Ecclesiastica Gentis Scotorum*, ii. 178, p. 100, Bologna 1627), who states that Bricmore was one of a number of Scots sent to the university of Oxford by decree of the council of Vienne, and that he was a canon of Holy Rood, Edinburgh. Dempster adds that he died in England in 1382, but gives as his authority for this the continuator of John of Fordun, which appears, however, to be a false reference, and the date is scarcely compatible with the mention of the council which was held seventy years earlier.

[Authorities quoted in text.] R. L. P.

BRIDE, Saint. [See Brigit.]

BRIDELL, FREDERICK LEE (1831-1863), landscape painter, was born at Southampton 7 Nov. 1831, and was the son of a builder in that town. It was intended that he should follow his father's business, but his impulse towards art was irresistible, and, without having received any regular instruction, he began to paint portraits at the age of fifteen. His performances attracted the attention of a picture cleaner and dealer visiting Southampton, who induced him to become his apprentice for seven years. During this period Bridell continued to study painting by his own unaided efforts, and produced a number of landscapes in the manner of the old masters, which became the property of his employer. In 1851, his first exhibited picture, 'A Bit in Berkshire,' was hung at the Royal Academy. In 1853 his engagement was renewed for seven years on condition of his being sent to the continent to study, his time being jealously accounted for, and his work remaining mortgaged to his master. After a short stay at Paris he established himself at Munich, where he contracted friendships with Piloty and other eminent painters. Here he perfected himself

in the technique of his art, painted and exhibited several pictures highly commended by the German critics, and sent one, 'The Wild Emperor Mountains,' to the Royal Academy. In 1857 he returned to England, and unsuccessfully sought release from his imprudent contract. His first important work, 'Sunset on the Atlantic,' was exhibited at Liverpool in November of this year, and excited great admiration from the effective treatment of sea and sky. In 1858 he produced his 'Temple of Venus,' a gorgeous ideal composition painted in emulation of Turner; and in the autumn of this year went to Rome and painted his grand picture of the Coliseum, a most impressive work. The skeleton of the colossal edifice rears itself gaunt and black against the prevailing moonlight, and the barefooted Capuchins, who on the same spot inspired Gibbon with the thought of his 'Decline and Fall,' bearing torches at the head of a dim funeral procession, steal along in the deep shadows. It was intended to be the final member of a series of poetical landscapes illustrating the rise, greatness, and decline of imperial Rome, which, with this exception, were never painted. In February 1859 he married Eliza, daughter of William Johnson Fox, herself an artist of distinguished talent. His health failing almost immediately afterwards, he returned to England, freed himself from his bondage by a heavy payment, partly in money and partly in pictures, and in 1860 was again in Italy, where he made sketches for numerous landscapes subsequently executed, among which 'Under the Pine Trees at Castle Fusano,' 'On the Hills above Varenna,' 'The Chestnut Woods at Varenna,' 'Etruscan Tombs at Cività Castellana,' and 'The Villa d'Este, Tivoli,' deserve especial mention. His principal patron at this time was Mr. James Wolff of Southampton, for whom the 'Temple of Venus' had been painted, and who acquired so many of his works as to form a 'Bridell Gallery,' subsequently dispersed by auction, when it produced nearly four thousand pounds. He also enjoyed the patronage of Sir Theodore Martin, Mr. John Platt, and other collectors of discrimination, and seemed to have every prospect of a brilliant career, when in August 1863 he succumbed to consumption, originated by early privations and aggravated by his devotion to art. Notwithstanding his youth and the obstacles created by impaired health and unfavourable circumstances, he had already proved himself 'a great master of landscape and an honour to the English school' (Wornum). His art had gone counter to the tendencies of his day. While his contemporaries, under pre-Raphaelite influences, inclined more and more to the minute and realistic, Bridell, inspired by Turner, was broad, ample, and imaginative. His work was bold and rapid, full of rich colour and refined feeling. He aimed especially at conveying the sentiment of a landscape. Every picture was inspired by some leading idea, which made itself felt in the minutest detail. Sunrise and sunset, mist and moonshine, combinations of light and shade in general, were his favourite effects. 'In his painting of skies and clouds in particular,' says Sir Theodore Martin, 'Mr. Bridell seems to us to occupy a place among British artists only second to Turner.' As a man he was a type of the artistic temperament, bright and genial, impulsive and affectionate, quick of apprehension, and fertile in ideas, and, when not depressed by sickness or excessive toil, full of energy and enthusiasm. He had wonderfully overcome the disadvantages of his early education, and his notes of travel and art, though perfectly simple and nowise intended for publicity, show that he could write as well as paint.

[Wornum's Epochs of Painting, pp. 544, 545; Bryan's Dictionary of Painters; Sir Theodore Martin in Art Journal for January, 1864; private information.] R. G.

BRIDEOAKE, RALPH (1613-1678), bishop of Chichester, was of lowly parentage, being, according to Wood, the son of Richard Brideoake, or Briddock, of Cheetham Hill, Manchester, by his wife, Cicely, daughter of John Booth of Lancashire. He was born at Cheetham Hill, and was baptised at the Manchester parish church on 31 Jan. 1612-13. He was educated at the Manchester grammar school, and admitted a student of Brasenose College, Oxford, 15 July 1630. He graduated B.A. in 1634, and through the favour of Dr. Pink, warden of New College, Oxford, was appointed pro-chaplain of that college. In 1636, by royal letters, he was made M.A., having then the reputation of being a good Greek scholar and a poet. He addressed some verses to Thomas Randolph, prefixed to his 'Poems;' and he wrote two elegies on the death of 'Master Ben Jonson.' To eke out his income he took the curacy of Wytham, near Oxford, and acted also as corrector of the press in the university. In this last capacity he had occasion to revise a book by Dr. Thomas Jackson, president of Corpus Christi College, who was so much pleased with Brideoake's work, that he rewarded him with the mastership of the Manchester free grammar school, which fell vacant about the year 1638, and of which Jackson was patron. Of this school Brideoake was

afterwards, 20 Aug. 1663, elected a feoffee. He lived at Manchester, and his house, misprinted 'Dr. Pridcock's,' is on Ogilby's road-map. He also became chaplain to the Earl of Derby. He was present at the siege of Lathom House, and proved himself a zealous servant of the family. It is thought that he had some share in the authorship of the account of the siege which was first published in 1823. Meanwhile he lost the mastership of the school, and his monument says he was despoiled of all his goods. When Lord Derby and his family fell into trouble, he did his best for them, and had for a time the management of the estates. When the earl was taken prisoner after the battle of Worcester, his chaplain proceeded to London to intercede for his life. The speaker, Lenthall, to whom Brideoake applied, was unable to interfere with the sentence, but he was so much struck with the address and powers of the applicant, that he offered to make him his chaplain, which offer was accepted, as also that of preacher of the rolls, which came soon after. Lenthall underwent some obloquy for thus preferring a 'malignant,' but he remained true to his choice, and procured him about the end of the year 1654 the vicarage of Witney in Oxfordshire, to which the revenues of the rectory of the same place were subsequently annexed by Lenthall's means. He was at Witney until August 1663, when he presented a successor. He was likewise appointed to Long Molton, Norfolk. When Lenthall was on his death-bed in 1662, he sent for Brideoake as a comforter. Brideoake was also a friend of Humphrey Chetham, the benefactor, and assisted him in his concerns. At Witney, and at St. Bartholomew's, London, to which rectory he was instituted 8 Sept. 1660, on presentation of the king, he performed his duties with great zeal, 'outvying in labour and vigilancy' his brethren in the ministry. On 14 March 1659 he was appointed one of the commissioners for the approbation and admission of presbyterian ministers, and notwithstanding this appointment he managed, 'having a good way of thrusting and squeezing, and elbowing himself into patronage,' to find favour with the royal party after the Restoration. He became chaplain to the king, was installed canon of Windsor 28 July 1660, on the presentation of the king, created D.D. 2 Aug. 1660, and rector of the valuable living of Standish, near Wigan. This last preferment had been given him formerly by the Earl of Derby, but he had been kept out of it by the 'triers' in the Commonwealth time. In 1662 he offered his London benefice to Richard Heyrick in exchange for the wardenship of the collegiate church at Manchester. He preached at the latter church several times, on one occasion arousing the indignation of the saintly Henry Newcome by some expressions which he used. Evelyn heard him preach a mean discourse. In September 1667 he was installed dean of Salisbury, and 9 March 1674-5, through the influence of the Duchess of Portsmouth, 'whose hands,' as Anthony à Wood sagely remarks, 'were always ready to take bribes,' he was elected to the bishopric of Chichester, with which see he was permitted to hold *in commendam* his canonry of Windsor and his rectory of Standish. He died suddenly when on a visitation of his diocese, 5 Oct. 1678, and was interred in Bray's Chapel, Windsor, where his effigy in alabaster covers his grave. Wood says that it was his ambition to acquire wealth and to found a family. He was a liberal subscriber to the repair of his own and St. Paul's Cathedral. He married Mary, daughter of Sir Richard Saltonstall of Okenden, Essex, and left three sons. He wrote several occasional pieces of poetry. He contributed some Latin and English verses to 'Musarum Oxoniensium Charisteria pro regina Maria recens e nixus laboriosi discrimine recepta' (Oxon. 1638), and a Latin commendatory preface to N. Mosley's '*ψυχοσοφία*' or Natural and Divine Contemplations of the Soul of Man,' 1653.

BRIDFERTH. [See BYRHTFERTH.]

BRIDGE, BEWICK (1767–1833), mathematician, was a native of Linton in Cambridgeshire, and received his education at St. Peter's College, Cambridge, of which society he became a fellow. He graduated B.A. as senior wrangler in 1790, M.A. in 1793, B.D. in 1811, being proctor in 1800. After serving as professor of mathematics in the East India Company's College at Haileybury, near Hertford, he was, in 1816, presented by St. Peter's College to the vicarage of Cherryhinton, near Cambridge, where he died on 15 May 1833, aged 66.

Bridge, who was a fellow of the Royal

Society, published: 1. 'Lectures on the Elements of Algebra,' London, 1810, 8vo. 2. 'Six Lectures on the Elements of Plane Trigonometry,' London, 1810, 8vo. These were included in a collection of his 'Mathematical Lectures,' 2 vols. Broxbourne, 1810–11. 3. 'A Treatise on Mechanics: intended as an Introduction to the Study of Natural Philosophy,' 2 vols. London, 1813-14. 4. 'An Elementary Treatise on Algebra,' 3rd edit. London, 1815, 8vo, 12th edit. 1847. 5. 'A compendious Treatise on the Elements of Plane Trigonometry; with the method of constructing Trigonometrical Tables,' 2nd edit. London, 1818, 8vo, 4th edit. 1832. 6. 'A compendious Treatise on the Theory and Solution of Cubic and Biquadratic Equations, and of Equations of the higher orders,' London, 1821, 8vo. 7. 'A brief Narrative of a Visit to the Valleys of Piedmont, inhabited by the Vaudois, the descendants of the Waldenses; together with some observations upon the fund now raising in this country for their relief,' London, 1825, 8vo.

BRIDGE or BRIDGES, RICHARD (*fl.* 1750), was one of the best organ-builders of the eighteenth century, but details as to his biography are very deficient. His first recorded organ is that of St. Bartholomew the Great, which was built in 1729. In the following year he built his best organ, that of Christchurch, Spitalfields, which cost the very small sum of 600*l.* In the same year he built the organ at St. Paul's, Deptford, in 1733 that of St. George's-in-the-East, in 1741 that of St. Anne's, Limehouse, in 1753 that of Enfield parish church, and in 1757 that of St. Leonard's, Shoreditch. Bridge also built an organ for Eltham parish church, and, together with Jordan and Byfield, the organ at St. Dionis Backchurch (between 1714 and 1732), the celebrated instrument at Yarmouth parish church, and an organ at St. George's Chapel in the same town. In 1748 (according to the *Morning Advertiser* of 20 Feb.) he was living in Hand Court, Holborn, but the date and place of his death, which took place prior to 1776, are unknown.

[Hopkins and Rimbault's History of the Organ, (1855), pt. i. p. 100.] W. B. S.

BRIDGE, WILLIAM (1600?–1670), puritan divine, was born in Cambridgeshire about 1600. He entered Emmanuel College at the age of sixteen, became M.A. in 1626, and was many years a fellow of the college. In 1631 he was appointed to the lectureship of Colchester, where he continued but a short time. In 1633 he held a Friday lecture at St. George's Tombland, Norwich, for which he was paid by the corporation. In 1636 he was the rector for St. Peter's Hungate, Norwich, a living at that time worth no more than 22*l.* per annum. Here he was silenced by Bishop Wren. He continued, however, in the city for some time after his suspension until he was 'excommunicated' and the writ 'de capiendo' came forth against him. He took refuge in Holland and settled at Rotterdam, succeeding as pastor the celebrated Hugh Peters, and he was thus associated in the pastorate with Jeremiah Burroughs. From a passage in the 'Apologetical Narration' it may be inferred that Bridge received much support from the magistrates of the city, and that many wealthy persons joined the church, some of whom had fled from the persecution of Bishop Wren. While at Rotterdam he renounced the ordination which he had received when he entered the church of England, and was again ordained, after the independent way, by Samuel Ward, B.D., after which he similarly ordained Ward.

He returned to England in 1642, frequently preached before the Long parliament, and on 30 July 1651 the sum of 100*l.* per annum was voted to him, to be paid out of the impropriations. It would seem from two letters preserved in Peck's 'Desiderata Curiosa' that he was consulted by the parliament in reference to a general augmentation of ministers' salaries. Dr. Nathaniel Johnson, in his book entitled 'The King's Visitorial Power asserted,' gives a petition from the fellows of Emmanuel College, Cambridge, signed, amongst others, by Bridge, and says, 'He was a great preacher, and one of the demagogues of this parliament.' He was in the assembly of divines at Westminster, and was one of the writers of the 'Apologetical Narration,' published in 1643. His name is also subscribed to the 'Reasons of the Dissenting Brethren against certain Propositions concerning Presbyterial Government,' which was published in 1648.

After a brief sojourn at Norwich, where he preached a sermon to the volunteers, Bridge at length settled at Great Yarmouth, where he continued his labours till 1662. It is very probable that at Yarmouth his congregation, at least for some time, met in the parish church, for in 1650 the north part of the church was enclosed for a meeting-place at an expense of 900*l.* When ejected he went to reside at Clapham, near London, and preached in, if not founded, the 'Independent Meeting' there. He died at Clapham on 12 March 1670, aged 70. From an epitaph

in Yarmouth church it appears that he was twice married. The name of his first wife is not known; he afterwards married the widow of John Arnold, merchant and bailiff of that town.

Bridge's printed works are nearly all sermons. His first publication is dated 1640, and was printed at Rotterdam. In 1649 the works of Bridge were published in three volumes, quarto, printed by Peter Cole, London. Another collection was published under the title of 'Twenty-one Books of Mr. William Bridge, collected into Two Volumes,' London, Peter Cole, 1657, 4to. Other publications followed in 1665, 1668, and 1671, and after his death eight sermons were published as 'Remains,' 1673. In 1845 the whole works of Bridge were printed in five volumes, octavo, from copies chiefly in the possession of the Rev. Frederick Silver, of Jewry Street. Fifty-nine separate titles are given in the table of contents of the five volumes; a complete list is in Darling's 'Cyclopædia.' A very antique-looking portrait of the author, 'Obit 1670. W. Sherwin sculp.,' accompanies the first volume of 1845. It originally appeared in a volume of Bridge's sermons. A different and very pleasing portrait of Bridge may be seen in Dr. Williams's library.

[Memorial of William Bridge, prefixed to his collected Works, 1845; Palmer's Nonconf. Memorial, iii., 1803; Peck's Desiderata Curiosa, 1732–5; Darling's Cyclopædia, 1860.] J. H. T.

BRIDGEMAN, HENRY (1615–1682), bishop of Sodor and Man, was born on 22 Oct. 1615 at Peterborough, where his father, John Bridgeman [q. v.], was in residence as first prebendary. He was baptised on 25 Oct. at the consecration of the new font in the nave of the cathedral. He was educated at Oriel College, Oxford (admitted 1629, B.A. 20 Oct. 1632). He was elected fellow of Brasenose 6 Dec. 1633, graduated M.A. 16 June 1635, and resigned his fellowship in 1639. On 16 Dec. 1639 he was instituted to the rectory of Barrow, Cheshire, and on 9 Jan. 1640 to that o Bangor-is-coed, Flintshire, resigned by his father. Both these preferments were sequestered, Barrow in 1643, Bangor in 1646; the former probably as a case of pluralism. Walker assigns as the ground of sequestration that 'in the time of the rebellion he did his majesty faithful service.' This was in his capacity as army chaplain to James, seventh Earl of Derby (executed 15 Oct. 1651). Loyal in politics, in church matters the influence of his mother, whom Halley calls a puritan, seems not to have been without effect upon him; this perhaps explains a remark of Wood, who speaks of him as 'a careless person.' Before his sequestration he put Robert Fogg, a nonconforming divine, as curate in charge of Bangor, binding himself to pay him an allowance. To this Robert Fogg the committee for plundered ministers gave the living of Bangor on 1 July 1646; on 22 July the committee gave the fifths of the rectory to Bridgeman's wife, Katherine. Bridgeman was made archdeacon of Richmond on 20 May 1648. At the Restoration he regained the rectories of Barrow and Bangor (his petition to the House of Lords for the restitution is dated 23 June 1660), and resigned his archdeaconry on being made dean of Chester on 13 July 1660. On 1 Aug. 1660 his university made him D.D.; the chancellor's letters say that 'he had done good service to the king.' Further preferment came in the shape of the prebend of Stillington at York (20 Sept.), and the sinecure of Llanrwst. Fogg still held the curacy of Bangor, though offered 80*l.* if he would go, and was only removed by the Uniformity Act of 1662. Within Bangor parish was a much more distinguished nonconformist, Philip Henry, who had been presbyterially ordained on 16 Sept. 1657 as minister of the old church (distinct from the chapel of ease) at Worthenbury. On Bridgeman's return Henry's position was entirely dependent upon the reinstated rector's favour. Bridgeman at first showed no disposition to interfere with Henry, who, for his part, offered (7 May 1661) to give up part of his income and accept a position at Worthenbury under Richard Hilton, his designated successor. But Roger Puleston, son of his former patron, was bitter against his nonconformist tutor. He made a bargain with Bridgeman, in virtue of which Bridgeman, on 24 Oct. 1661, publicly read out Henry's discharge 'before a rable.' Though Henry was not properly an 'ejected minister,' it must be owned that Bridgeman was led into a harsh exercise of his legal rights. Two months later we have a glimpse in Henry's diary of Bridgeman at Chester 'busy in repairing the deanes house, as if hee were to live in it for ever.' In 1671 he succeeded Isaac Barrow (translated to St. Asaph) as bishop of Sodor and Man (consecrated Sunday, 1 Oct.), with leave to retain his deanery. He added to Bishop Barrow's educational foundation at Castletown in the Isle of Man (founded 1668, and now represented by King William's College, built 1830). He also gave a communion cup and a paten (bearing his arms) to St. German's Church, Peel. He died 15 May 1682, and was buried in Chester Cathedral. He was twice married, first to Katherine, daughter of William Lever of Kersal, near Manchester, by whom he had three daughters, of whom Elizabeth married

Thomas Greenhalgh of Brundlesham, Lancashire; secondly to Margaret ——, by whom he had a surviving daughter, Henrietta, married to Rev. Samuel Aldersey, of Aldersey and Spurstow, Cheshire, and a son named William John Henry (born shortly before the father's death, and died in December following). Bridgeman's widow married John Allen in 1687.

Henry, 1882, pp. 18, 27 seq., 98 seq., 102, 313, 394; Lewis's Topog. Dict. of Eng. 1833, art. 'Man;' Burke's Peerage, 1883, p. 157; extract from Cathedral Register, Peterborough.] A. G.

BRIDGEMAN, JOHN (1577–1652), bishop of Chester, was born at Exeter, 'not far from the palace gate,' on 2 Nov. 1577. His grandfather was Edward Bridgeman, sheriff of the city and county of Exeter in 1578, who had, with other issue, two sons, Michael, the eldest (who died without issue), and Thomas, of Greenway, Devonshire. The future bishop was the eldest son of Thomas. He was educated at Cambridge, being originally of Peterhouse (B.D. 1596); he was elected a foundation fellow of Magdalene in 1599, and took his M.A. in 1600 (admitted *ad eundem* at Oxford 4 July 1600), and proceeded D.D. in 1612. He was canon residentiary of Exeter, and also held the first prebend at Peterborough and (from 1615) the rich rectory of Wigan, he being then one of James I's chaplains. On the translation of Thomas Morton to Coventry and Lichfield (6 March 1619) George Massie was nominated his successor at Chester, but his death intervened. Bridgeman was elected bishop of Chester 15 March 1619, and consecrated on 9 May. The revenues of the bishopric were small, and in 1621 (apparently on resigning his canonry) he was allowed to hold *in commendam*, along with Wigan, the rectory of Bangor-is-coed, Flintshire. This he resigned (9 Jan. 1640) to his son Henry. In 1635 Bridgeman bought from Richard Egerton the manor of Malpas, Cheshire, with Wolvesacre, Wigland, and Bryne-pits. As bishop of a diocese abounding in nonconformists, Bridgeman had no very easy or pleasant task when called upon to assert the authority of the church. His predecessor, Morton, who drafted the king's declaration of 24 May 1618, known as the 'Book of Sports,' was perhaps less in sympathy with the puritans than Bridgeman; but he seldom proceeded beyond threats. Bridgeman was complained of as negligent in his duties as a repressor of nonconformity, and commissioners were sent by his metropolitan to report upon the state of his diocese. Thus stirred into activity he for a time performed an unwelcome office with some vigour. Contrasting him with Morton, Halley says of Bridgeman that he 'loved neither to threaten nor to strike, but when he did strike he did it as effectually as if he loved it.' A curious story is told of his shutting up Knutsford Chapel, on the ground that it had been profaned by the casual introduction of a led bear. This has been described as 'episcopal superstition,' but was probably only an excuse for closing a place which was in nonconforming hands. Thomas Paget, minister of Blackley Chapel, who had been treated by Morton with nothing worse than hard words, was cited before Bridgeman, and required to give reasons for judging it unlawful to kneel at the eucharist. In the course of the argument Bridgeman 'gravely laid himself upon a bench by a side of a table, leaning on his elbow,' to prove how unseemly would now be in church the posture in use at the institution of the sacrament. Paget was 'punished by suspension from his ministry [about 1620] for two years.' Some years later a more considerable man than Paget was suspended by Bridgeman. John Angier, the young nonconforming minister of Ringley Chapel, was the bishop's neighbour while Bridgeman resided at Great Lever, near Bolton, and was frequently called in to pray with the bishop's ailing wife. The position was for Bridgeman a somewhat equivocal one. 'My lord's grace of Canterbury' had already rebuked him for permitting nonconformists at Ringley and Dean; Angier's nonconformity he could not shake, so he told him he must suspend him, but would wink at his getting another place 'anywhere at a little further distance' [see ANGIER, JOHN]. In 1631 he suspended Samuel Eaton of Wirral, who is regarded as the founder of congregationalism in Cheshire. When the time came for the temporary overthrow of episcopacy, Bridgeman disappeared from public view, and seems to have lived quietly in retirement. He died in 1652 at Morton Hall, Shropshire, and was buried at Kinnerley, near Oswestry. There is a stone over his grave, and a mural monument to his memory in Kinnerley Church, but neither gives the date of death; the register at Kinnerley only dates from 1677. He married, on 29 April 1606, Elizabeth, daughter of William Helyar (died 1645), archdeacon of Barnstaple and canon of Exeter, and left five sons: (1) Orlando [q. v.]; (2) Dove, prebendary of Chester, married Miss Bennett, a Cheshire lady, and had one son, Charles, archdeacon of Richmond, who died unmar-

ried in 1678; (3) Henry [q. v.]; (4) James, who was knighted, married Miss Allen, a Cheshire lady, and had issue James (died unmarried), Frances (married William, third Baron Howard of Escrick), Magdalen (married W. Wynde), and Anne; (5) Richard of Combes Hall, Suffolk, married Katharine Watson, and had a son William, who became secretary to the admiralty and clerk of the privy council; this William married Diana Vernatti, and had issue Orlando (whose only surviving son William died unmarried), and Katharine (married Orlando Bridgeman, fourth son of the second baronet, and died without issue). Ormerod says that Bishop Bridgeman 'was the compiler of a valuable work relating to the ecclesiastical history of the diocese, now deposited in the episcopal registry, and usually denominated Bishop Bridgeman's Ledger.'

[Walker's Sufferings of the Clergy, 1714, pt. ii. pp. 10, 24; Brook's Lives of the Puritans, 1813, ii. 293 seq.; Ormerod's Cheshire, 1819, i. 79; Fisher's Companion and Key to the Hist. of Eng. 1832, pp. 728, 756; Notes and Queries, 1st ser. i. 80; Halley's Lancashire, its Puritanism and Nonconformity, 1869, i. 240, 260, 285, ii. 81, 148; Hook's Lives of the Archbishops of Canterbury, Laud, 1875, xi. 39; Lee's Diaries and Letters of P. Henry, 1882, pp. 194, 394; Burke's Peerage, 1883, p. 157; information from the master of Magdalene, and from Rev. J. B. Meredith, Kinnerley, West Felton.] A. G.

BRIDGEMAN, SIR ORLANDO (1606?–1674), lord keeper, was the eldest son of Dr. John Bridgeman [q. v.], rector of the family living of Wigan, and in 1619 bishop of Chester. His mother was Elizabeth Helyar, daughter of Dr. Helyar, canon of Exeter and archdeacon of Barnstaple. After receiving a home training, Orlando Bridgeman went in July 1619 to Queens' College, Cambridge, where he took his bachelor's degree in January 1624, and was elected fellow of Magdalene (where his father had previously been a fellow and M.A.) on 7 July of the same year (*Hist. MSS. Comm.* 4th Rep. 483). In November of that year he was admitted at the Inner Temple, was called to the bar on 10 Feb. 1632, and was made a bencher shortly before the Restoration. His legal reputation during Charles I's reign stood very high. He was chief justice of Chester 1638; attorney of the court of wards and solicitor-general to the Prince of Wales 1640. He had also the reversion of the office of keeper of the writs and rolls in the common pleas. This promotion was no doubt favoured by his political views. He was returned in 1640 to both the Short and the Long parliaments for Wigan, and earnestly supported the royal cause, and was knighted on 20 November 1643. He voted against Strafford's attainder, and opposed the ordinance by which the militia was taken out of the hands of the king, and on the outbreak of the civil war assisted his father in maintaining the royal cause in Chester. He sat in the Oxford parliament of 1644, and in January 1645–6 was one of the king's commissioners at the Uxbridge negotiations, where, though the son of a bishop, he displayed such a tendency to compromise in church matters, and so lawyer-like a desire to meet political opponents halfway, that he incurred the censure both of Charles and of Hyde. As a prominent member of the royalist party he was compelled, after the death of Charles, to cease public advocacy at the bar, but appears to have escaped fine or other punishment, and on his submission to Cromwell, who was extremely anxious to secure the proper administration of the law, was permitted to practise in a private manner. He devoted himself to conveyancing, to which the vast changes in property resulting from the civil wars had given special importance, and for which the conspicuous moderation of his temper well fitted him, and was in this matter regarded as the leading authority by both parties, his very enemies not thinking their estates secure without his advice. After his death his collections were published under the title of 'Bridgeman's Conveyancer,' of which five editions were printed, the last and best in 1725. He was not, however, allowed to live in London; for he received a license from the council of state to remain at Beaconsfield with his family on 10 Sept. 1650, and on 15 and 29 Oct. also had special licenses to come to London and reside there for about a month, while engaged on special business.

In the political confusion which succeeded the death of Cromwell Bridgeman took no share. His legal reputation, however, and his former active loyalty were sufficient to put out of sight his late submission to Cromwell. Within a week after the king's return he was made successively serjeant-at-law and chief baron of the exchequer, and received a baronetcy, the first created after the Restoration (PRINCE, *Worthies of Devon*), in which he is described as of Great Lever, Lancashire. His property in this county appears to have been considerable, as Pepys speaks of another seat, probably Ashton Hall, 'antiently of the Levers, and then of the Ashtons,' as being shortly afterwards in his possession (PEPYS, *Diary*).

In October (9–19) 1660 Bridgeman presided as lord chief baron at the trial of the regicides. He conducted these trials—at a time when, if ever, political partisanship might

have been expected to run riot—with remarkable moderation. He appears to have especially distinguished himself by his effective reply to Cook, one of the prisoners, who 'delivered himself lawyer-like for two or three hours to the judges' (*Hist. MSS. Comm.* 5th Rep. 181 *b*). At the conclusion of this trial he was made lord chief justice of the common pleas, the patent being dated 22 Oct. 1660, though he is mentioned as chief justice as early as 29 May (*ib.* 153). During the seven years that he held this office he preserved a high and undiminished reputation. 'His moderation and equity were such that he seemed to carry a chancery in his breast' (PRINCE, *Worthies of Devon*). His love of legal exactitude was great enough to become proverbial, and an illustration of it is furnished by North, who states that when it was proposed to move his court, which was draughty, into a less exposed situation, Bridgeman refused to allow it, on the ground that it was against Magna Charta, which enacts that the common pleas shall be held 'in certo loco,' and that the distance of an inch from that place would cause all pleas to be 'coram non judice.' Reports of his judgments were edited from the Hargraves MSS. by S. Bannister in 1823. He was during these years several times commissioned to execute the office of speaker in the lords during the absence of the lord chancellor (*Hist. MSS. Comm.* 7th Rep. 100 *a*, 142 *b*, 175 *a*). On 26 March 1664 he was appointed one of the first visitors of the Royal College of Physicians, London (*ib.* 8th Rep. 234 *b*).

On the disgrace of Clarendon the great seal was given to Bridgeman on 30 Aug. 1667, not as lord chancellor, but with the inferior title of lord keeper. In May of the same year he received a grant of the reversion of the surveyorship of the customs (*Cal. of State Papers*, Dom. Ser., 1666-7, p. 139). Until 23 May 1668, when he was succeeded in the chief justiceship by Sir John Vaughan, he filled both offices. At this time he resided at Essex House in the Strand; but he had also a seat at Teddington, Middlesex, where he was dangerously ill in March 1667 (*Hist. MSS. Comm.* 7th Rep. 485), and apparently another residence at Bowood Park (*Cal. of State Papers*, Dom. Ser., 1660–1). According to general testimony Bridgeman did not retain in this new office his former high reputation. Thus Burnet says that 'his study and practice had lain so entirely in the common law that he never seemed to know what equity was.' His love of moderation and compromise had evidently grown upon him. North describes him as 'timorous to an impotence, and that not mended by his great age. He laboured very much to please everybody, a temper of ill consequence to a judge. It was observed of him that if a case admitted of diverse doubts, which the lawyers call points, he would never give all on one side, but either party should have something to go away with. And in his time the court of chancery ran out of order into delays and endless motions in causes, so that it was like a fair field overgrown with briars.' There was, too, another cause for his failure: 'What was worst of all, his family was very ill qualified for that place, his lady being a most violent intriguess in business, and his sons kept no good decorum whilst they practised under him; and he had not the vigour of mind and strength to coerce the cause of so much disorder in his family' (NORTH, *Life of Lord-keeper Guildford*, p. 180).

As lord keeper, Bridgeman was of course the mouthpiece of Charles to the parliament, and delivered the king's speech on 10 Oct. 1667, 19 Oct. 1669, 14 Feb. and 24 Oct. 1670, and 22 April 1671 (*Parl. Hist.* vol. iv.) Actually, however, he was, during all the transactions connected with the treaty of Dover in 1670, kept in ignorance of the real intentions of Charles. As a staunch protestant it was necessary to withhold from him the clause by which Charles bound himself to declare his conversion to Romanism in return for a special subsidy from Louis XIV, and he was therefore, with others, tricked by the duplicate treaty which Buckingham, also too protestant to be trusted, was allowed to imagine that he had concluded (DALRYMPLE, *Memoirs*). His general views, however, and his personal integrity made him an obstacle to the full carrying out of Charles's plans. 'He boggled at divers things required of him;' he refused to put the seal to the Declaration of Indulgence, as judging it contrary to the constitution; he heartily disapproved of the closing of the exchequer, refused to stop the lawsuits against the bankers, which resulted from this step, by injunction, although Charles was known personally to wish it; and remonstrated against the commission of martial law, although at that time there was colour for it by a little army encamped on Blackheath (NORTH, *Life of Guildford*, 181). 'For the sake of his family, that gathered like a snowball while he had the seal, he would not have formalised with any tolerable compliances; but these impositions were too rank for him to comport with' (NORTH, *Examen*, p. 38). He appears also to have refused to put the great seal to various grants designed for the king's mistresses. It was decided to remove him, and on 17 Nov. 1672 the seal was taken from him and given to

Shaftesbury, who was thought to be willing to be more compliant. The warrant from Charles to Henry Coventry to receive the seal from Bridgeman is dated 16 Nov. (*Hist. MSS. Comm.* 4th Rep. 234 *b*). He at once went into retirement at Teddington, and after an illness in the spring of 1673, from which, however, he had completely recovered in April, he died on 25 June 1674, and was buried at Teddington. He was twice married: first to Judith, daughter and heir of John Kynaston of Morton, Shropshire; secondly, in May 1670 (*ib.* 7th Rep. 488 *b*), to Dorothy, daughter of Dr. Saunders, provost of Oriel College, Oxford, widow of George Craddock of Carswell Castle, Staffordshire. By his first marriage he had one son, by his second two sons and a daughter, the latter of whom, in 1677, married Sir Thomas Middleton of Chirk Castle, bringing with her 6,000*l.*, left her by her father (*ib.* 470 *a*). The present Earl of Bradford is the direct lineal descendant of the lord keeper by his first wife.

[The principal modern authority for Bridgeman's life is Foss's Lives of the Judges, to which the writer of this article desires to own the fullest obligation. This, however, deals purely with his legal career. A good many notices of him occur in the Records of the Hist. MSS. Commission, and in the Calendar of State Papers, of which the most important are referred to above. North's Examen and Life of Lord-keeper Guildford, and the articles in the last edition of the Biog. Brit., have also been consulted. Prince, in his Worthies of Devon, has one or two interesting facts.] O. A.

BRIDGES. [See also BRYDGES.]

BRIDGES, CHARLES (1794-1869), evangelical divine, was educated at Queens' College, Cambridge, and proceeded B.A. 1818, M.A. 1831. He was ordained deacon in 1817, priest in 1818, and in 1823 was presented to the vicarage of Old Newton, near Stowmarket in Suffolk. In 1849 he was nominated vicar of Weymouth, where he remained till failing health induced him to retire to the rectory of Hinton Martell in Dorsetshire, to which he was presented by Lord Shaftesbury. Bridges was a prominent member of the evangelical party in the church, and author of many popular devotional and theological treatises. Among his works may be mentioned a 'Memoir of Miss M. J. Graham' (1823), of which several editions were published, a similarly executed 'Memoir of Rev. J. T. Nottidge' (1849), and a 'Life of Martin Boos, Roman Catholic Priest in Bavaria' (1855), which forms the fifth volume of the 'Library of Christian Biography,' edited by R. Bickersteth. Besides these devotional biographies, he wrote 'An Exposition of Psalm cxix.' (1827), which ran through several editions, and was also translated into German; 'An Exposition of the Book of Proverbs' (1846); 'Forty-eight Scriptural Studies' (5th ed. 1833); 'Fifty-four Scriptural Studies' (1837); and several smaller devotional and practical tracts. A book entitled 'The Christian Ministry, with an Inquiry into the causes of its Inefficiency, and with special reference to the Ministry of the Establishment' (1830) reached many editions. He also published several sermons, one of the latest of which, against 'Vain Philosophy' (1860), is a counterblast to the teaching of broad-church divines. A small selection from Bridges' correspondence was published at Edinburgh in the year after his death, under the title of 'Letters to a Friend.'

[Register and Mag. of Biography, i. 399; Brit. Mus. Cat.] R. B.

BRIDGES, JOHN (*d.* 1618), bishop of Oxford and controversialist, was educated at Pembroke Hall, Cambridge (B.A. in 1556, M.A. in 1560, and D.D. Canterbury in 1575). He was elected fellow of Pembroke in 1556. He spent some years in Italy in his youth; translated, about 1558, three of Machiavelli's discourses into English, which were not published, and was afterwards beneficed at Herne in Kent. From 1565 to 1610 he was prebendary of Winchester. He preached a sermon at Paul's Cross in 1571, which was printed, and published in 1572 a translation from the Latin of Rudolph Walther's 175 'Homilies on the Acts of the Apostles.' In the following year he replied to two catholic treatises—Thomas Stapleton's 'Counterblast' and Sanders's 'Visible Monarchie of the Romaine Church'—in a book entitled 'The Supremacie of Christian Princes over all Persons throughout their Dominions.' Bridges was appointed dean of Salisbury in 1577. In 1581 Bishop Aylmer directed him, with other divines, to reply to Edmund Campion's 'Ten Reasons' in favour of the church of Rome. In 1582 he was a member of a commission appointed to hold a conference with some papist dialecticians. But his most important contribution to polemical literature was 'A Defence of the Government established in the Church of Englande for Ecclesiasticall Matters' (London, by John Winder, 1587). It is a quarto of 1412 pages, directed against Calvinism. It undertakes especially to answer two books—Thomas Cartwright's 'Discourse of Ecclesiastical Government,' or a 'briefe and plaine declaration,' 1574 (a translation from the Latin of Walter Travers),

and Theodore Beza's 'Judgment,' which had been published in an English translation in 1580. Bridges's ponderous volume was immediately answered in the three tracts, 'A Defence of the Godlie Ministers against the Slaunders of D. B.,' 1587; 'A Defence of the Ecclesiastical Discipline ordayned of God. . . . Against a Replie of Maister Bridges,' 1588; 'A Dialogue, wherein is . . . laide open the Tyrannicall Dealing of L. Bishopps . . . (according to D. B., his "Judgement"), . . .' 1588 (?). The chief interest attaching to Bridges's book lies in the fact that it was the immediate cause of the great Martin Mar-Prelate controversy. About a year after the publication of Bridges's 'Defence' there was issued the earliest of the Mar-Prelate tracts, with the title of 'Oh read over D. John Bridges, for it is a worthy worke,' an introductory epistle to a promised 'Epitome of the fyrste Booke of that right worshipfull volume, written against the Puritanes in the defence of the noble cleargie by as worshipful a prieste, Iohn Bridges, presbyter, an elder, Doctor of Diuillitie, and Deane of Sarum.' Scathing criticisms are here made on Bridges's literary incapacity: 'A man might almost run himselfe out of breath before he could come to a full point in many places in your booke.' The satirists state doubtfully that he was the author of 'Gammer Gurton's Needle,' usually attributed to Bishop Still (see *Brit. Mus. MS. Addit.* 24487, ff. 33–7), and add that he had published 'a sheet in rime of all the names attributed to the Lorde in the Bible.' In February 1588–9 the promised epitome of Bridges's first book duly appeared, as the second Martin Mar-Prelate tract. Four bishops who were specially attacked here replied in an 'Admonition,' drawn up by Thomas Cooper, bishop of Winchester; but Bridges does not seem to have been connected with the later development of the controversy. Bridges took part in the Hampton Court conference of 1603, and on 12 Feb. 1603–4 was consecrated bishop of Oxford at Lambeth by Whitgift. He attended the king on his visit to Oxford in 1605, when he was created M.A., and took part in the funeral of Henry, prince of Wales, in 1612. Bridges died at a great age in 1618. Unlike his predecessors in the see of Oxford, he lived in his diocese —at March Baldon (Marshall, *Diocese of Oxford*, p. 121). His last published work was 'Sacrosanctum Novum Testamentum . . . in hexametros versus . . . translatum,' 1604.

A son, William, proceeded B.D. of New College, Oxford, on 9 July 1612, and was archdeacon of Oxford from 1614 till his death in 1626 (Wood, *Fasti*, Bliss, i. 348).

[Strype's Annals, 8vo, II. ii. 710, III. i. 414, ii. 96, 97, 151–2, iv. 432; Strype's Aylmer, 33; Strype's Whitgift, i. 198, 549, ii. 518, iii. 219; Wood's Fasti (Bliss), i. 314; Nichols's Progresses of James I; Dexter's Congregationalism, pp. 143 et seq.; Arber's Martin Mar-Prelate Controversy; Tanner's Bibliotheca, p. 122; Brit. Mus. Cat. of Printed Books before 1640.] S. L.

BRIDGES, JOHN (1666-1724), topographer, was born in 1666 at Barton Seagrave, Northamptonshire, where his father then resided. His grandfather was Colonel John Bridges of Alcester, Warwickshire, whose eldest son of the same name purchased the manor of Barton Seagrave about 1665, and employed himself for many years in the careful improvement of the estate by planting it and introducing such discoveries in agriculture as were then recent, particularly the cultivation of sainfoin. His mother was Elizabeth, sister of Sir William Trumball, secretary of state. He was bred to the law, became a bencher of Lincoln's Inn, was appointed solicitor to the customs in 1695, a commissioner in 1711–2, and cashier of excise in 1715. He was also a governor of Bridewell and Bethlehem Hospitals. In 1718 he was elected a fellow of the Society of Antiquaries, and in the following year he began the formation of his voluminous manuscript collections for the history of his native county. He personally made a circuit of the county, and employed several persons to make drawings, collect information, and transcribe monuments and records. In this manner he expended several thousand pounds. It was his intention to make another personal survey of the county, but before he could carry this design into effect he was attacked by illness, and died at his chambers in Lincoln's Inn on 16 March 1723–4.

Bridges's manuscripts fill thirty folio volumes, besides five quarto volumes of descriptions of churches collected for him and four similar volumes in his own handwriting. These are now to be found, paged and indexed, in the Bodleian Library at Oxford. Left by Bridges as an heirloom to his family, they were placed by his brother William, secretary of the stamp office, in the hands of Gibbons, a stationer and law-bookseller at the Middle Temple Gate, who circulated proposals for their publication by subscription, and engaged Dr. Samuel Jebb, a learned physician of Stratford in Essex, to edit them. Before many numbers had appeared Gibbons became bankrupt, and the manuscripts remaining in the hands of the editor, who had received no compensation for his labours, were at length secured by Mr. William Cartwright, M.P., of Aynho, for his native county,

and a local committee was formed to accomplish the publication of the work. This was entrusted to the Rev. Peter Whalley, a master at Christ's Hospital. The first volume appeared in 1762, and the first part of the second in 1769; but delay arose in consequence of the death of Sir Thomas Cave, chairman of the committee, and the entire work was not published till 1791, more than seventy years after Bridges's first collection. It bears this title: 'The History and Antiquities of Northamptonshire. Compiled from the manuscript collections of the late learned antiquary, John Bridges, Esq. By the Rev. Peter Whalley, late fellow of St. John's College, Oxford,' 2 vols., Oxford, 1791, folio. Whalley's part in the work was very inadequately performed. He professed, indeed, to have added little of his own, except what he compiled from Wood and Dugdale; and so easy a matter as the continuation of the lists of incumbents and lords of manors was left unattempted. Archdeacon Nares wrote the preface, and Samuel Ayscough compiled the index. The value of these two folio volumes is entirely due to Bridges, and if his papers had been properly arranged he would, in the estimation of his successor, Baker, have equalled Dugdale. A magnificent copy of the work is preserved among the select manuscripts in the British Museum (*Addit. MSS.* 32118–32122). It is illustrated with numerous sketches, engravings, and additions in print and manuscript. A printed title pasted inside the cover states that 'this copy of Bridges's "History and Antiquities of Northamptonshire" was, at great expense and with untiring perseverance, illustrated by Mr. Thomas Dash of Kettering. It has received numerous additions by his son William Dash, who has had it rebound (1847) in its present extended form of five volumes, and strictly enjoins on the party receiving it that the book be preserved in its entirety, and that no part of it be ever broken up or dispersed.' It was bequeathed by Mr. William Dash to the British Museum, where it was deposited in 1883.

Bridges's collection of books and prints was sold by auction soon after his death. The catalogue of his library was long retained as valuable by curious collectors. A portrait of him, painted by Sir Godfrey Kneller in 1706, was engraved by Vertue in 1726.

[Manuscript Memoir in Dash's copy of the Hist. of Northamptonshire, and other manuscript notes in the same work; Bridges's Northamptonshire, pref., also ii. 221; Brydges's Censura Lit. (1807), iii. 219, 331; Nichols's Illustr. of Lit. iii. 521–36, vii. 407, 436; Nichols's Lit. Anecd. i. 94, 161, ii. 61, 105–9, 700, 701, iii. 615, vi. 49, 189, viii. 348, 349, 399, 566, 682–4, ix. 566; Noble's Biog. Hist. of England, ii. 182; Notes and Queries, 2nd ser. xi. 461, 5th ser. v. 86, 175; Quarterly Review, ci. 3, 4.] T. C.

BRIDGES, NOAH (*fl.* 1661), stenographer and mathematician, was educated at Balliol College, Oxford, and acted as clerk of the parliament which sat in that city in 1643 and 1644. He was created B.C.L. on 17 June 1646, 'being at that time esteemed a most faithful subject to his majesty.' He was in attendance on King Charles I in most of his restraints, particularly at Newcastle and the Isle of Wight (*State Papers*, Dom., Charles II, vol. xx. art. 126). His majesty granted him the office of clerk of the House of Commons, but the appointment failed to pass the great seal because of the surrender of Oxford. It appears that the king also promised him the post of comptroller, teller, and weigher of the Mint. After the Restoration he vainly endeavoured to obtain the grant of these offices with survivorship to his son Japhet. For several years he kept a school at Putney, where he was living in 1661.

He is the author of: 1. 'Vulgar Arithmetique, explayning the Secrets of that Art, after a more exact and easie way than ever,' London, 1653, 12mo. A portrait of the author is prefixed. 2. 'Stenographie and Cryptographie: or the Arts of Short and Secret Writing. The first laid down in a method familiar to meane capacities; the second added to convince and cautionate the credulous and the confident . . .' London, 1659, 16mo. This extremely scarce work is dedicated to Sir Orlando Bridgeman. The address to the reader is thus most curiously dated: 'March $\frac{18}{59}$ the first of the four last months of 13 yeares squandered in the Valley of Fortune.' A second edition, which has escaped the notice of bibliographers, appeared with this title: 'Stenography and Cryptography. The Arts of Short and Secret Writing. The second Edition enlarged, with a familiar Method teaching how to cypher and decypher all private Transactions. Wherein are inserted the Keys by which the Lines of Text-Writing affixed to those Cyphers are folded and unfolded,' London, 1662. 3. 'Lux Mercatoria, Arithmetick Natural and Decimal . . .' London, 1661, 8vo. With a fine portrait of the author, engraved by Faithorne. This portrait was re-engraved as Milton, for Duroveray's edition of 'Paradise Lost.'

[Wood's Fasti Oxon. (ed. Bliss), ii. 94; Granger's Biog. Hist. of England (1824), iv. 77, v. 297; Lewis's Historical Account of Stenography (1816), 75; Anderson's Hist. of Shorthand, 107; Rockwell's Teaching, Practice, and Literature of

Shorthand, 70; Lowndes's Bibl. Man. (ed. Bohn), i. 270; Green's Cal. Dom. State Papers (1652-3), 424 (1660-1), 347, 348, 445, 446 (1661-2), 219; Hist. MSS. Comm. 6th Rep. 473 *a*; Kennett's Register and Chron. 542, 655.] T. C.

BRIDGES, THOMAS (*fl.* 1759-1775), dramatist and parodist, was a native of Hull, in which town his father was a physician of some repute. He was a wine merchant, and a partner in the firm of Sell, Bridges, & Blunt, who failed in Hull as bankers in 1759. In 1762 Bridges produced, under the pseudonym of Caustic Barebones, a travestie of Homer, in 2 vols. 12mo, which for the epoch is fairly spirited in versification, and obtained some popularity, but is not much wittier nor more decent than other works of its class. This was reprinted 1764, and in an enlarged form in 1767, 1770, and 1797. He also wrote 'The Battle of the Genii,' 4to, 1765, burlesquing, in a poem in three cantos, Milton's description in 'Paradise Lost' of the fight with the rebel angels; and 'The Adventures of a Bank Note,' 1770, 2 vols. 8vo, a novel to which in 1771 two other volumes were added. To the stage he contributed 'Dido,' a comic opera in two acts, produced at the Haymarket 24 July 1771, and printed in 8vo the same year; and the 'Dutchman,' a musical entertainment, played for the fourth time at the Haymarket 8 Sept. 1775, and also printed the same year. Some trace of humour is discoverable in the earlier piece; the latter is wholly flat. The 'Battle of the Genii' was for a time attributed to Francis Grose, the antiquarian.

[Genest's Account of the English Stage; Biographia Dramatica; an Address given to the Literary and Philosophical Society at Kingston-upon-Hull, 5 Nov. 1830, by Charles Frost, F.S.A., Hull, 1831; Lowndes's Bibliographer's Manual; Watt's Bibl. Brit.; Halkett and Laing's Dictionary of Anonymous and Pseudonymous Literature.] J. K.

BRIDGET, SAINT. [See BRIGIT.]

BRIDGETOWER, GEORGE AUGUSTUS POLGREEN (1779-1840?), violinist, was probably born at Biala in Poland in 1779. His father was a mysterious individual, who was known in London society as the 'Abyssinian Prince,' and according to some accounts was half-witted. The mother was a Pole, but nothing is known as to how the negro father (for such he seems to have been) came to be in Poland, and there is considerable doubt as to whether the name he bore was not an assumed one. Bridgetower and his father were in London before the year 1790. His principal master was Barthelemon, though he is said also to have studied the violin under Giornovichi and composition with Attwood. His first appearance took place at an oratorio concert at Drury Lane Theatre on 19 Feb. 1790, when he played a concerto between the parts of the 'Messiah,' attended by his father 'habited in the costume of his country.' It has been surmised that this performance attracted the attention of the Prince of Wales, for on 2 June following, Bridgetower and Franz Clement, a clever Viennese violinist of about his own age, gave a concert at Hanover Square under the prince's patronage. At this concert the two boys played a duet by Deveaux, and (with Ware and F. Attwood) a quartet by Pleyel. The celebrated Abt Vogler was among the audience. In April 1791 Bridgetower played at one of Salomon's concerts, and at the Handel commemoration at Westminster Abbey in the same year (May–June) he and Hummel, dressed in scarlet coats, sat on each side of Joah Bates at the organ, pulling out the stops. In 1792 he played at the oratorios at the King's Theatre, under Linley's management (24 Feb.–30 March), and on 28 May he played a concerto by Viotti at a concert given by Barthelemon. His name also occurs amongst those of the performers at a concert given by the Prince of Wales for the benefit of the distressed Spitalfields weavers in 1794. Bridgetower was a member of the Prince of Wales's private band at Brighton, but in 1802 he obtained leave to visit his mother, who lived with another son (a violoncellist) at Dresden, and to go to the baths of Karlsbad and Teplitz. At Dresden he gave concerts on 24 July 1802 and 18 March 1803, which were so successful that, having obtained an extension of leave, he went to Vienna, where he arrived in April 1803. Here he was received with great cordiality, and was introduced by Prince Lichnowsky to Beethoven, who wrote for him the great Kreutzer Sonata. This work was first performed at a concert given by Bridgetower at the Augarten-Halle on either 17 or 24 May 1803, Beethoven himself playing the pianoforte part. The sonata was barely finished in time for the performance; indeed, the pianoforte part of the first movement was only sketched. Czerny said that Bridgetower's playing on this occasion was so extravagant that the audience laughed, but this is probably an exaggeration. There exists a copy of the sonata, formerly belonging to Bridgetower, on which he has made a memorandum of an alteration he introduced in the violin part, which so pleased Beethoven that he jumped up and embraced the violinist, exclaiming, 'Noch einmal, mein lieber

Bursch!' In later years Bridgetower alleged that the Kreutzer Sonata was originally dedicated to him, but that before he left Vienna he had a quarrel with Beethoven about some love affair which caused the latter to alter the inscription. After his visit to Vienna, Bridgetower returned to England, and in June 1811 took the degree of Mus. Bac. at Cambridge, where his name was entered at Trinity Hall. The graduates' list gives his name as George Bridgetower, but a contemporary paragraph in the 'Gentleman's Magazine' leaves but little doubt that this was the mulatto violinist. His exercise on this occasion was an anthem, the words of which were written by F. A. Rawdon; it was performed with full orchestra and chorus at Great St. Mary's on 30 June 1811. In the following year was published a small work entitled 'Diatonica Armonica for the Pianoforte,' by 'Bridgetower, M.B.,' who was probably the subject of this article. After this, Bridgetower seems totally to disappear; he is believed to have lived in England for many years, and to have died there between the years 1840 and 1850, but no proof of this is forthcoming. It is also said that a married daughter of his is still living in Italy. He was an excellent musician, but his playing was spoilt by too great a striving after effect. In person he was remarkably handsome, but of a melancholy and discontented disposition.

BRIDGEWATER, third DUKE OF (1736–1803). [See EGERTON, FRANCIS.]

BRIDGEWATER, EARLS OF. [See EGERTON, JOHN, first EARL, 1579–1649; EGERTON, JOHN, second EARL, 1622–1686; EGERTON, JOHN, third EARL, 1646–1701; EGERTON, FRANCIS, sixth EARL, 1736–1803; EGERTON, FRANCIS HENRY, eighth EARL, 1756–1829.]

BRIDGEWATER, JOHN (1532?–1596?), a catholic divine, the latinised form of whose name is AQUEPONTANUS, was a native of Yorkshire, though 'descended from those of his name in Somersetshire.' He received his education at Hart Hall, Oxford, whence he migrated to Brasenose College soon after he had taken his degrees in arts, that of master being completed in 1556. On 5 Feb. 1559–60 he was collated to the archdeaconry of Rochester, and on 1 May 1562 he was admitted to the rectory of Wotton-Courtney, in the diocese of Wells. As a member of convocation he subscribed the articles of 1562, and in the same year he voted against the six articles altering certain rites and ceremonies prescribed by the Book of Common Prayer. On 14 April 1563 he was elected rector of Lincoln College, Oxford, on the resignation of Dr. Francis Babington. In the following month he was admitted rector of Luccombe, Somersetshire, and soon afterwards he was appointed canon residentiary of Wells. He was also domestic chaplain in London to Robert Dudley, earl of Leicester. On 16 April 1565 he was admitted rector of Porlock, Somersetshire; on 28 Nov. 1570 he became master of the hospital of St. Katharine, near Bedminster; and on 29 March 1572 he was admitted to the prebend of Bishop's Compton in the church of Wells.

In 1574 he resigned the rectorship of Lincoln College, probably to avoid expulsion, as he was a catholic at heart and had given great encouragement to the students under his government to embrace the old form of religion. Leaving Oxford the same year, he crossed over to the English college of Douay. Wood asserts that he took with him some of the goods belonging to the college, and also 'certain young scholars.'

Bridgewater probably passed the remainder of his life on the continent, at Rheims, Paris, and other cities of Flanders, France, and Germany. In 1594 he was residing at Trèves. Wood mentions a rumour that he joined the Society of Jesus, and he is claimed as a member of it by Father Nathaniel Southwell and Brother Foley. There is no proof, however, that he was a jesuit. Indeed the evidence seems clearly to point the other way, for it is certain that he was one of the exiles in Flanders who in 1596 refused to sign the address in favour of the English fathers of the Society of Jesus (*Records of the English Catholics*, i. 408).

He is the author of: 1. 'Confutatio virulentæ Disputationis Theologicæ, in qua Georgius Sohn, Professor Academiæ Heidelbergensis, conatus est docere Pontificem Romanum esse Antichristum à Prophetis et Apostolis prædictum,' Trèves, 1589, 4to. Sohn published a reply at Würzburg in 1590, entitled 'Anti-Christus Romanus contra Joh. Aquepontani cavillationes et sophismata.' 2. 'Concertatio Ecclesiæ Catholicæ in Anglia adversus Calvinopapistas et Puritanos sub Elizabetha Regina quorundam hominum doctrina et sanctitate illustrium renovata et recognita,' three parts, published at Trèves, 1589–94, 4to. The original work was printed at Trèves in 1583,

8vo, its principal compiler being John Gibbons, rector of the Jesuit college in that city, though some of the lives of the martyrs were written by John Fenn, a secular priest. Bridgewater greatly enlarged the work, which is of great biographical and historical value. An account of its multifarious contents will be found in the Chetham Society's 'Remains,' xlviii. 47–50.

BRIDGMAN, RICHARD WHALLEY (1761?–1820), writer on law, was born about 1761, and died at Bath 16 Nov. 1820, in his fifty-ninth year. He was an attorney, and acted as one of the clerks of the Grocers' Company. He left the following works, published between 1798 and 1813: 1. 'Thesaurus Juridicus; containing the Decisions of the several Courts of Equity, &c., systematically digested from the Revolution to 1798,' 2 vols. 8vo, 1799–1800. 2. 'Reflections on the Study of the Law,' 1804, 8vo. 3. 'Dukes' Law of Charitable Uses,' &c., 1805, 8vo. 4. 'An Analytical Digested Index of the Reported Cases in the several Courts of Equity,' 1805, 2 vols.; 2nd edition, 1813, 3 vols.; 3rd edition, edited by his son, R. O. Bridgman, 1822, 3 vols. 8vo. 5. 'Supplement to the Analytical Digested Index,' &c., 1807, 8vo. 6. 'A Short View of Legal Bibliography, to which is added a Plan for classifying a Public or Private Library,' 1807, 8vo. 7. 'A Synthesis of the Law of Nisi Prius,' 1809, 8vo. 8. 'Judgment of the Common Pleas in Benyon against Evelyn,' 1811, 8vo. 9. An annotated edition of Sir F. Buller's 'Introduction to the Law relative to Trials at Nisi Prius,' 1817, 8vo.

[Watt's Bibl. Brit.; Reed's Catal. of Law Books, 1809; Gent. Mag. 1820, pt. ii. p. 477; Notes and Queries, 6th ser. xi. 13; Brit. Mus. Cat.] C. W. S.

BRIDLINGTON, JOHN OF (*d.* 1379), Saint. [See JOHN.]

BRIDPORT, VISCOUNT (1727–1814). [See HOOD, ALEXANDER.]

BRIDPORT or BRIDLESFORD, GILES OF (*d.* 1262), bishop of Salisbury, was a native of the town from which he took his name. As dean of Wells, an office to which he was elected in 1253, he arbitrated in a dispute between the abbot and monks of Abingdon. In 1255 he was archdeacon of Berkshire. He was elected bishop of Salisbury in 1256, and was, as bishop-elect, sent that year on an embassy by Henry III to Alexander IV with reference to the money claimed by the pope for the gift of the Sicilian crown. The object of this embassy is described as 'against the clergy and people of England,' who were taxed to satisfy the pope's demands (*Ann. Dunst.* iii. 199). Bridport escaped, though not without danger, from the snares of the French, and on his return to England was employed to make an agreement with the clergy as to the payment of the tenth required of them. He was consecrated 11 March 1257, and was allowed by the pope to retain his former ecclesiastical revenues, along with his bishopric. When he entered on his see the cathedral was nearly finished, and he covered the roof with lead. The church was consecrated on 30 Sept. 1258 by Archbishop Boniface, in the presence of the king and many bishops, who were gathered by Bridport's exertions (MATT. PARIS, v. 719). On 24 Aug. 1258 he was appointed one of the twenty-four commissioners of the aid chosen in accordance with the arrangements of the parliament of Oxford, and on 21 Nov. 1261 was nominated by the king as one of the arbitrators between himself and the barons. In 1260 he founded the college of Vaux or De Valle Scholarum at Salisbury. This interesting foundation is a strong proof of the bishop's munificence and love of learning. In 1262 he attempted to exercise visitatorial rights over his chapter, but withdrew his claim. He died 13 Dec. 1262, and was buried on the south side of the choir of his church.

Rolls Ser.; Godwin, De Præsulibus; Leland's Itin. iii. 94; Cassan's Lives of the Bishops of Salisbury; Hutchins's Modern Wiltshire, vi. 734; Jones's Annals of the Church of Salisbury, 110; Tanner's Notitia Monastica, 608.] W. H.

BRIERCLIFFE or BREARCLIFFE, JOHN (1609?–1682), antiquary, was an apothecary in Halifax, where he was born, and where, on 4 Dec. 1682, he died of a fever at the age of 63. He made various collections relating to his native town and parish. His 'Surveye of the Housings and Lands within the Townshippe of Halifax,' 1648, was said to have been in the library of Halifax church, but according to Watson, who published his 'History of Halifax' in 1775, there had been

no such thing there for twenty years. Watson says he had in his possession 'Halifax inquieryes for the findeinge out of severall giftes given to pious uses,' written 22 Dec. 1651. Thoresby (*Vic. Leod.* p. 68) refers to his catalogue of the vicars of Halifax, and inscriptions under their arms painted on tables in the library of that church.

[Watson's History of Halifax (1775), pp. 454-5; Gough's Topography, ii. 434.] T. F. H.

BRIERLEY, ROGER. [See BRERELEY.]

BRIGGS, HENRY (1561-1630), mathematician, was born at Warley Wood, in the parish of Halifax, Yorkshire, in February 1560-1, according to the entry in the Halifax parish register. It has been stated, on the authority of Blomefield's 'Topographical History of Norfolk,' that Briggs was 'descended from the ancient family of that name at Salle in Norfolk;' but the pedigrees given by Blomefield have been described as untrustworthy (see discussion of pedigree in *Notes and Queries*, 5th ser. vii. 507). There is evidence, however, that Richard Briggs, the brother of Henry Briggs, became submaster and afterwards head-master of Norfolk school. He was a personal friend of Ben Jonson; 'an original letter of Ben Jonson, written in the corner of Farnaby's edition of Martial,' and addressed 'Amico summo D. Rich. Briggesio,' is to be found in the 'Gentleman's Magazine' for 1786 (i. 378). William Briggs [q.v.], as has been conjectured, may have been the grandson of Richard.

Henry Briggs was sent from a grammar school in the vicinity of Warley to St. John's College, Cambridge, in 1577. He became scholar in 1579, took the degree of B.A. in 1581, and that of M.A. in 1585. In 1588 he was made fellow of his college, examiner and lecturer in 1592, and soon after 'Reader of the Physic Lecture founded by Dr. Linacre.' When Gresham College was founded in London, he became professor of geometry there. After holding this professorship for twenty-three years (from 1596 to 1619) Briggs accepted, at the request of Sir Henry Savile, the professorship of astronomy at Oxford which he had founded and had himself held for some time. At his last lecture Savile took leave of his audience with a very high commendation of his successor. For a little time Briggs continued to hold the professorship at Gresham College, but resigned it in 1620 (25 July). Upon his appointment as Savilian professor, he was admitted a fellow-commoner of Merton College, and was incorporated M.A.

He had formed a friendship with James Ussher, afterwards archbishop of Armagh, in 1609. Two letters of Briggs to Ussher are in 'Archbishop Ussher's Letters,' Nos. 4 and 16, London, 1686, folio. In the first of them (dated August 1610) he describes himself as being engaged on the subject of eclipses; and in the second (10 March 1615) as being 'wholly employed about the noble invention of logarithms, then lately discovered.' On hearing of Napier's discovery he had been struck with enthusiasm, and in 1616 he went to Scotland to visit Napier. An interesting account of the first interview between Briggs and Napier is given by William Lilly, the astrologer, in his 'History of his Life and Times.' When the two great mathematicians met, Lilly says, 'almost one quarter of an hour was spent, each beholding other almost with admiration, before one word was spoke. At last Mr. Briggs began, "My Lord, I have undertaken this journey purposely to see your person, and to know by what engine of wit or ingenuity you came first to think of this most excellent help unto astronomy, viz. the logarithms; but, my Lord, being by you found out, I wonder nobody else found it out before, when now known it is so easy."' Lilly goes on to say that Napier 'was a great lover of astrology, but Briggs the most satirical man against it that hath been known' (LILLY, *History of his Life and Times*, pp. 154-6). On another occasion, being asked for his opinion of judicial astrology, Briggs is said to have described it as 'a system of groundless conceits.'

Briggs died at Merton College 26 Jan. 1630-1. A Greek epitaph was written on him by Henry Jacob, one of the fellows of Merton, which ends by saying that his soul still astronomises and his body geometrises. He was buried in the college chapel, under a stone marked only by his name. From the references to him by his contemporaries it is evident that he was a man of amiable character. Several panegyrics of him are collected in the 'Biographia Britannica.'

In the various visits of Briggs to Napier the improvements afterwards made in logarithms by Briggs were agreed on between them. The idea of tables of logarithms having 10 for their base, as well as the actual calculation of the first tables of this kind, is due to Briggs. The discussions between Briggs and Napier referred to the methods of calculation that were to be adopted in carrying out Briggs's suggestion for the better adaptation of Napier's discovery to the construction of tables.

The following is a list of the published works of Briggs: 1. 'A Table to find the

Height of the Pole, the Magnetical Declination being given.' This table was for an instrument described by Dr. Gilbert, and was published by Blundeville in his 'Theoriques of the Seven Planets,' London, 1602. 2. 'Tables for the Improvement of Navigation,' printed in the second edition of Edward Wright's treatise entitled 'Certain Errors in Navigation, detected and corrected,' London, 1610. 3. 'Logarithmorum Chilias Prima' (London, 1617), printed 'for the sake of his friends and hearers at Gresham College.' 4. 'A Description of an Instrumental Table to find the Part Proportional, devised by Mr. Edward Wright, subjoined to Napier's table of logarithms, translated into English by Mr. Wright, and after his death published by Briggs with a preface of his own, London, 1616 and 1618.' 5. 'Lucubrationes et Annotationes in Opera posthuma J. Neperi,' Edin. 1619. 6. 'Euclidis Elementorum Sex libri priores,' &c., London, 1620 (printed without his name). 7. 'A Tract on the North-west Passage to the South Sea through the continent of Virginia,' with only his initials prefixed, London, 1622. The reason of this publication was probably that he was then a member of a company trading to Virginia (see WARD's *Gresham Professors*). 8. 'Mathematica ab Antiquis minus cognita' (published by Dr. George Hakewill). 9. 'Arithmetica Logarithmica,' London, 1624. 10. 'Trigonometria Britannica,' London, 1633. These last two are Briggs's greatest works. The second was left unfinished by him, but was completed and published by his friend Henry Gellibrand, professor of astronomy at Gresham College. They are both works of enormous labour. The first, for example, 'contains the logarithms of 30,000 natural numbers to fourteen places of figures, besides the index' (see HUTTON's *Mathematical Dictionary*).

Besides these, Briggs wrote the following works, which have never been published: 1. 'Commentaries on the Geometry of Peter Ramus.' 2. 'Duæ Epistolæ ad celeberrimum virum Chr. Longomontanum.' One of these is said to contain some remarks about a treatise of Longomontanus on squaring the circle, and the other a defence of arithmetical geometry. 3. 'Animadversiones Geometricæ.' 4. 'De eodem Argumento.' 5. 'A Treatise of Common Arithmetic.' 6. 'A Letter to Mr. Clarke, of Gravesend, dated from Gresham College, 25 Feb. 1606; with which he sends him the description of a ruler, called Bedwell's ruler, with directions how to draw it.'

In the catalogue of the Ashmolean MSS. there is a description of 'six mathematical and astronomical letters to Mr. Briggs' from Sir Christopher Heydon. They are said to be 'chiefly on comets.' The second is dated 1 Nov. 1603; the fourth, 14 Dec. 1609; the sixth, 21 April 1619.

Brit. (Kippis); Brodrick's Memorials of Merton Coll. p. 74. For Briggs's contributions to mathematics see Hutton's Mathematical and Philosophical Dictionary, under 'Briggs,' 'Napier,' and 'Logarithms.'] T. W–R.

BRIGGS, HENRY PERRONET (1791?–1844), subject and portrait painter, son of John Hobart Briggs, was born at Walworth in or about 1791; he was descended from Vincent Perronet [q. v.], whose daughter Elizabeth married William Briggs of the custom house, the Wesleys' secretary. While at school at Epping he sent two well-executed engravings to the 'Gentleman's Magazine,' and in 1811 entered as a student at the Royal Academy. From 1814 he was a constant exhibitor at the Academy, his paintings being mainly historical in subject, though after his election as an academician in 1832 he devoted his attention almost exclusively to portraiture. Two of his historical pictures are now in the National Gallery: No. 375, the 'First Conference between the Spaniards and Peruvians, 1531,' and No. 376, 'Juliet and the Nurse.' His painting of 'George III presenting the Sword to Lord Howe on board the Queen Charlotte, 1794,' was purchased by the British Institution, and presented to Greenwich Hospital. Among the more successful of the Shakespearean scenes delineated by him are his 'Othello relating his adventures to Desdemona.' Of his numerous portraits, the best perhaps was that of Lord Eldon. His pictures are not without merits of construction, but his colouring and flesh-tints especially are unpleasing. He died in London on 18 Jan. 1844. He married Eliza Alderson, by whom he had one son, who died young, and a daughter, who married the Rev. J. H. Carr, of Adisham Rectory, Kent.

[Athenæum, 27 Jan. 1844; Art Union, March 1844; Catalogue of the National Gallery (British and Modern Schools); Redgrave's Dict. of Artists; Redgrave's Century of Painters, ii. pp. 78, 79.] W. W.

BRIGGS, JOHN, D.D. (1788–1861), catholic bishop, was born at Manchester on 20 May 1788. He was educated first at Sedgeley Park, and afterwards at St. Cuthbert's College, Ushaw, which he entered 13 Oct. 1804.

There he began his theological studies, and by 14 Dec. 1804 had received the tonsure and the four minor orders. He was ordained subdeacon on 19 Dec. 1812, and deacon on 3 April 1813, being advanced to the priesthood on 9 July 1814. For several years he held his place at St. Cuthbert's College as one of the professors. In 1818 he was first sent on the mission to Chester. There he remained in charge for fourteen years until his nomination on 28 March 1832 as president of St. Cuthbert's, when he returned to Ushaw. In January 1833 he was raised to the episcopate as coadjutor of Bishop Penswick, and was consecrated on 29 Jan. 1833 as bishop of Trachis in Thessalia. On the death of Bishop Penswick, 28 Jan. 1836, Bishop Briggs succeeded him as vicar apostolic of the northern district. On 30 July 1840 the four vicariates, created in 1688 by Innocent XI, were newly portioned out into eight by Gregory XVI, Bishop Briggs's diocese being then restricted to Yorkshire, and his title thenceforth being vicar-apostolic of the Yorkshire district. Ten years afterwards, when Pius IX called the new catholic hierarchy into existence, Bishop Briggs was translated on 29 Sept. 1850 to Beverley. Having held that see for ten years, he at length, by reason of his increasing infirmities, resigned it on 7 Nov. 1860, and two months later, on 4 Jan. 1861, died in his seventy-third year at his house in York. On 10 Jan. he was buried in the old parochial church of St. Leonard at Hazlewood, Tadcaster, which among all the parish churches of England has the exceptional peculiarity of having remained uninterruptedly a catholic church ever since its foundation in 1286 by Sir William de Vavasour. The bishop was a count of the holy Roman empire, and a domestic prelate of his holiness, as well as assistant at the pontifical throne. He was remarkable for his lofty and commanding stature, and in his later years had a peculiarly noble and patriarchal presence. His chosen motto, which was justified by his twenty-seven years of episcopal rule, was pre-eminently characteristic, 'Non recuso laborem.'

[Brady's Episcopal Succession, 280, 341, 396–398; Annual Register for 1861, 407; Gent. Mag. January 1861, 232; Hull Advertiser, 12 Jan. 1861, 4–5; Tablet, 12 Jan. 1861, 17, 21.]

C. K.

BRIGGS, JOHN (1785-1875), Indian officer, entered the Madras infantry in 1801. He took part in both the Mahratta wars of the present century, serving in the campaign which ended that eventful struggle as a political officer under Sir John Malcolm, whom he had previously accompanied on his mission to Persia in 1810. He was one of Mountstuart Elphinstone's assistants in the Dekhan, subsequently served in Khandesh, and succeeded Captain Grant Duff as resident at Sattára, after which, in 1831, he was appointed senior member of the board of commissioners for the government of Mysore when the administration of that state was assumed by the British government owing to the misrule of the maharájá. His appointment to this office, which was made by the governor-general, Lord William Bentinck, was not agreeable to the government of Madras, and after a somewhat stormy tenure of office, which lasted barely a year, Briggs resigned his post in September 1832, and was transferred to the residency of Nágpur, where he remained until 1835. In that year he left India, and never returned. He was promoted major-general (1838), lieutenant-general (1851), and general (6 Feb. 1861). After his return to England he was prominent as a member of the court of proprietors of the East India Company in the discussion of Indian affairs, and was a vigorous opponent of Lord Dalhousie's annexation policy. He was also an active member of the Anti-Corn-law League. He was a good Persian scholar, and translated Ferishta's 'Mohammadan Power in India,' and the 'Siyar-al-Mutákhirin,' which recorded the decline of the Moghul power. He was also the author of an essay on the land tax of India, and in a series of 'Letters addressed to a young person in India' he discussed in a light but instructive style various questions bearing upon the conduct of young Indian officers, civil and military, and especially their treatment of the natives. Briggs was elected a fellow of the Royal Society in recognition of his proficiency in oriental literature. He died at Burgess Hill, Sussex, on 27 April 1875, at the age of eighty-nine.

[Allen's Indian Mail, 1875; Letters addressed to a Young Person in India, by Lieutenant-colonel John Briggs, late Resident at Sattára; On the Land Tax of India, &c., by Lieutenant-colonel John Briggs, London, 1830; Memoir of General John Briggs, by Major Evans Bell, London, 1885.]

A. J. A.

BRIGGS, JOHN JOSEPH (1819–1876), naturalist and topographer, was born in the village of King's Newton, near Melbourne, Derbyshire, 6 March 1819. His father, John Briggs, who married his cousin, Mary Briggs, was born and resided for eighty-eight years on the same farm, at King's Newton, which had been the freehold of his ancestors for three centuries. John Joseph went, in 1828, to the boarding school of Mr. Thomas Rossel Potter,

the well-known historian of 'Charnwood Forest,' at Wymeswold, Leicestershire, and in 1833 to the Rev. Solomon Saxon, of Darley Dale. Early in life he was apprenticed to Mr. Bemrose, the venerable head of the printing firm of Bemrose & Sons, Derby; but ill-health compelling him to relinquish an indoor occupation, he thenceforward devoted himself, like his ancestors, to farming. He became the faithful chronicler of the seasons, and recorded all the facts and occurrences coming within his observation during at least thirty years. He kept these notes carefully bound in manuscript volumes, and shortly before his death they were announced for publication, but have not yet been given to the world. Meanwhile he utilised his notes regularly in the 'Field' newspaper, in which as early as 1855 he had originated 'The Naturalists' Column,' and entered into correspondence with the leading naturalists of the time. His papers also in the 'Zoologist,' 'Critic,' 'Reliquary,' 'Sun,' 'Derby Reporter,' and 'Leicestershire Guardian' (edited by his old schoolmaster Mr. Potter), were full of picturesque descriptions of nature and sketches of places and objects in the midland counties of archæological and antiquarian interest. He became a fellow of the Royal Society of Literature, and a member of the British Archæological Association. In 1869 he married Hannah Soar of Chellaston. Shortly before his death he had retired upon an ample competency, but his health failed, and he died at the place of his birth on 23 March 1876, leaving a widow, a son, and three daughters.

His works consist of: 1. 'Melbourne, a Sketch of its History and Antiquity,' 1839, 4to. 2. 'History of Melbourne, including Biographical Notices,' &c., with plates and woodcuts, Derby, 1852, 8vo, pp. 206. 3. 'The Trent and other Poems,' Derby, 1857, 8vo; with additions, Derby, 1859, 8vo. 4. 'The Peacock at Rowsley,' London, 1869, 8vo, a gossiping book about fishing and country life, descriptive of a well-known resort of anglers at the junction of the Wye and Derwent. 5. 'Guide to Melbourne and King's Newton,' Derby, 1870, 8vo. 6. 'History and Antiquities of Hemington, Leicestershire,' twelve copies, privately printed, with coloured lithographs and woodcuts, London, 1873, large 4to. Besides these works and the unpublished observations on natural history, Briggs had been for many years collecting materials for a book to be entitled 'The Worthies of Derbyshire,' for which we believe he had notes for at least 700 memoirs. This work, however, has not been published.

[Briggs's Works; Reliquary, 1876; personal recollections.] J. W.-G.

BRIGGS, Sir JOHN THOMAS (1781–1865), accountant-general of the navy, of an old Norfolk family, a direct descendant of Dr. William Briggs [q. v.], and, in a collateral line, of Professor Henry Briggs [q. v.], was born in London on 4 June 1781. He entered early into the civil service of the admiralty, and at the age of twenty-five was appointed secretary to the 'commission for revising and digesting the civil affairs of the navy,' under the presidency of Lord Barham, in which capacity he was the virtual author of the voluminous reports issued by the commission, 1806–9. When the work of this commission was ended, Briggs was appointed assistant-secretary of the victualling board, a post which he held till, in 1830, he was selected by Sir James Graham, then first lord of the admiralty, as his private secretary; but was shortly afterwards advanced to be commissioner and accountant-general of the victualling board. That board was abolished in 1832, and Briggs was appointed accountant-general of the navy. He held this office for the next twenty-two years, during which term many and important improvements were made in the system of accounts, in the framing of the naval estimates, in the method of paying the seamen, and, more especially, in enabling them to remit part of their pay to their wives and families. In 1851 Briggs received the honour of knighthood in acknowledgment of his long and efficient departmental service, from which he retired in 1854. He died at Brighton on 3 Feb. 1865. His wife, to whom he was married in 1807, survived him several years, and died at the age of ninety, on 24 Dec. 1873. His son, Sir John Henry Briggs, chief clerk at the admiralty, was knighted on his retirement in 1870, after a service of forty-two years.

[Gent. Mag. 3rd ser. xviii. 395; obituary notice, Morning Post, 8 Feb. 1865, and of Lady Briggs, ib., 3 Jan. 1874; leading art. in Daily Telegraph, 6 Jan. 1874; information contributed by Sir J. H. Briggs.] J. K. L.

BRIGGS, WILLIAM (1642–1704), physician and oculist, was born at Norwich, for which city his father, Augustine Briggs, was four times M.P. At thirteen he was entered at Corpus Christi, Cambridge, under Tenison, became a fellow of his college in 1668, and M.A. in 1670. After some years spent in tuition and in studying medicine, he went to France and attended the lectures of Vieussens at Montpellier, under the patronage of Ralph Montagu (afterwards Duke of Montagu), then British ambassador to France. To him Briggs dedicated his 'Ophthalmographia,' an

anatomical description of the eye, published at Cambridge in 1676, on his return from France. He proceeded M.D. at Cambridge in 1677, and was elected a fellow of the London College of Physicians in 1682. In the latter year the first part of his 'Theory of Vision' was published by Hooke (*Philosophical Collections*, No. 6, p. 167); the second part was published in the 'Philosophical Transactions' in 1683. The 'Theory of Vision' was translated into Latin, and published in 1685 by desire of Sir Isaac Newton, who wrote a commendatory preface to it, acknowledging the benefit he had derived from Briggs's anatomical skill and knowledge. A second edition of the 'Ophthalmographia' was published in 1687. Several points in Briggs's account of the eye are noteworthy, one being his recognition of the retina as an expansion in which the fibres of the optic nerve are spread out; another, his laying emphasis upon the hypothesis of vibrations as an explanation of the phenomena of nervous action. Briggs practised with great success in London, especially in diseases of the eye; was physician to St. Thomas's Hospital 1682–9, physician in ordinary to William III from 1696, and censor of the College of Physicians in 1685, 1686, 1692. In 1689, according to a curious memorial on one sheet preserved in the British Museum, Dr. Briggs was at great expense in vindicating the title of the crown to St. Thomas's Hospital, but was himself dismissed from his post, owing, as he states, to the machinations of a rival physician. From the same sheet we learn that, although he attended the royal household with great zeal for five years, he could get no pay; and notwithstanding that in 1698 William III promised that he should be considered, this was of no avail. In consequence of these circumstances, apparently early in Anne's reign, he begs for consideration in regard to the hospital appointment. He died 4 Sept. 1704, at Town Malling in Kent. His son, Henry Briggs, chaplain to George II, and rector of Holt in Norfolk, erected a cenotaph to his father's memory in Holt church in 1737. The inscription is quoted by Munk. His portrait, by R. White, was engraved by Faber.

[Bayle, Lond. 1735, iii. 592; Biog. Brit. 1747, i. 982; Memorial of Dr. W. Briggs relating to St. Thomas's Hospital, n.d. (about 1702); Munk's Coll. of Phys. (1878), i. 424.] G. T. B.

BRIGHAM, NICHOLAS (*d.* 1558), is mentioned by Bale (*Scriptores*, edit. 1557–9, not in that of 1548) as a Latin scholar and antiquarian, who gave up literature to practise in the law courts, and who flourished in 1550. To this Pits adds that he was no common poet and a good orator, and that in 1555 he built a tomb for the bones of Chaucer in Westminster Abbey. Later writers have taken this to be Nicholas Brigham, a 'teller' of the exchequer, who died in 1558. Wood (*Athenæ Oxon.* i. 309) conjectures that he was born near Caversham, where his eldest brother Thomas had lands of inheritance, and died in 6 Edward VI, but was descended from the Brighams of Brigham in Yorkshire. Now one Anthony Brigham was made bailiff of the king's manor of Caversham in 1543 (*Pat.* 35 *Hen. VIII*, p. 14, m. 6), and in 1544 had a grant of lands called Canon End there (*Pat.* 36 *Hen. VIII*, p. 2), but no Nicholas appears in the pedigree of Brigham of Canon End (*Harl. MS.* 1480, fol. 44, in which Anthony Brigham is erroneously called cofferer of the household), nor is either Anthony or Nicholas named in that of Brigham of Brigham (Poulson, *Holderness*, ii. 268). Wood further supposes that he studied at Hart Hall, Oxford, but whether or not he took a degree does not appear. Brigham had a grant on 29 June 1544 of the reversion, after his father-in-law, Ric. Warner, of a tellership in the exchequer (*Pat.* 36 *Hen. VIII*, p. 19, m. 25), and on 23 May 1558, as a teller of the exchequer, a grant of 50*l.* a year for life, which was confirmed on 14 Aug. following to him and Margaret, his wife, in survivorship (*Pat.* 4 and 5 *Ph. and M.* p. 13, m. 1, and 5 and 6 *Ph. and M.* p. 3, m. 30). In the spring of 1558 the queen appointed him receiver of the loan made her by the city of London, and general receiver of all subsidies, fifteenths, or other benevolences. Part of Sir Henry Dudley's conspiracy, for which many suffered death in 1556, was to seize the money of the exchequer in custody of Brigham. One of the conspirators, William Hunnys, or Hinnes, or Ennys (by Froude, *Hist.* vi. 441, called Heneage), of the royal chapel, who 'kept Brigham's wife, and was very familiar with him by that means,' was to find a way to do this; but Brigham's own money, which he kept with the queen's, was not to be taken, as he was 'a very plain man,' and they would have enough money without his. On Brigham's death in 1558 his widow forthwith married this Hunnys, who had escaped the fate of most of his fellow-conspirators; and there is in Somerset House an entry of a decree of 4 Nov. 1559 that a will made in September, October, November, or December 1558, leaving all his property to his wife, which will was disputed by James Brigham, nephew of Nicholas, is to be held valid, and that William Hunnys, 'husband and execu-

tor of the last will and testament' of Margaret, late wife of Nicholas Brigham, is to execute the trusts contained in it. From this it appears that Brigham died in December 1558, and that Margaret did not long survive him—indeed, her will, dated 2 June 1559, was proved on 12 Oct. following. Brigham had but one child, Rachael, who died on 21 June 1557, and was buried near Chaucer's tomb in Westminster Abbey with this inscription—'Unica quæ fueram proles spesque alma parentum Hoc Rachael Brigham condita sum tumulo. Vixit annis quatuor, mensibus tribus, diebus quatuor horis 15.' He wrote: (1) 'De Venationibus Rerum Memorabilium;' (2) 'Memoirs by way of a Diary;' and (3) 'Miscellaneous Poems,' but none of these seem now to be extant. Perhaps his only production now known is his epitaph on Chaucer. Before his time a leaden plate hung in St. Benet's Chapel, in Westminster Abbey, with Chaucer's epitaph by Surigonius of Milan (Dart, i. p. 83): 'Galfridus Chaucer vates et fama Poesis Materne hac sacra sum tumulatus humo.' Brigham in 1555 removed the poet's bones to a marble tomb he had built in the south transept, and on which there was a portrait of Chaucer taken from Occleve's 'De Regimine Principis,' with this epitaph:—

Qui fuit Anglorum vates ter maximus olim
Galfridus Chaucer conditur hoc tumulo:
Annum si quæras Domini, si tempora vitæ,
Ecce notæ subsunt quæ tibi cuncta notant.
25 Octobris 1400.
Ærumnarum requies mors.

After which comes—

N. Brigham hos fecit Musarum nomine sumptus.

and round the base,

Si rogitas quis eram, forsan te fama docebit;
Quod si fama negat, mundi quia gloria transit,
Hæc monumenta lege.

BRIGHT, HENRY (1814–1873), water-colour painter, was born at Saxmundham, Suffolk, in 1814. His talent for drawing was early exhibited, but little encouraged. He was apprenticed by his father to a chemist and druggist at Woodbridge. After serving his time he went to Norwich, and became dispenser to the Norwich Hospital. Whilst yet at Woodbridge he seems to have given to drawing whatever time he could get. The removal to Norwich, throwing him as it did into the company of the then famous artists of that city, was fortunate, as well for the world as for him. The influence of such painters as John Crome, Cotman, the elder Ladbrook, Stark, and Vincent was soon sufficient to make him abandon his bottles for the brush. He gave up his place at the hospital, and came to London to study. Here his talents introduced him to Prout, David Cox, J. D. Harding, and other well-known London painters, and he soon became a member of the Institute of Painters in Water Colours, and later of the Graphic Society. To the exhibitions of the former society he contributed in 1841 and 1844. He then seceded from it, and 'from that time till 1850 was an exhibitor of landscapes in oil to the Royal Academy exhibitions.' He spent more than twenty years in London, and then, his health failing, he retired to Ipswich, where he died on 21 Sept. 1873. During the time of his residence in London he spent a part of each year in travelling, when he painted scenery on the Rhine, the coasts of France and Holland, the Isle of Arran, and the Yorkshire Moors. On one of the continental trips he met J. W. M. Turner, and formed an acquaintance with him which ripened into friendship. The first painting in oil which he exhibited was hung at the Academy in 1845. It was bought by Clarkson Stanfield, R.A. The result of this purchase was an enduring friendship between the two painters. Prout and Harding were admirers of Bright's pictures and sketches. The queen and the prince consort were among his earliest patrons. In 1844 a water-colour painting called 'Entrance to an old Prussian Lawn—Winter—Evening effect' was bought by her majesty, who now possesses several others of Bright's works. As a teacher of his art Bright was for some years very popular, and derived nearly 2,000*l.* a year from this branch of his profession. Bright's pictures are varied in subject, and usually masterly in manipulation. His colouring is rich and deep. The largest and finest of his pictures (*Suffolk Chronicle*, 27 Sept. 1873), amongst which is 'Orford Castle,' are in the possession of Mr. Charles T. Maud of Bath.

[Art Journal, October 1873; Suffolk Chronicle, 27 Sept. 1873; Redgrave's Dict. of Artists of the English School; Athenæum, 27 Sept. 1873.] E. R.

BRIGHT, HENRY ARTHUR (1830–1884), merchant and author, was born at Liverpool on 9 Feb. 1830, the eldest son of Samuel Bright, J.P. (1799–1870; a younger

brother of Richard Bright, M.D., the pathologist), by Elizabeth Anne, eldest daughter of Hugh Jones, a Liverpool banker. The family pedigree goes back to Nathaniel Bright of Worcester (1493-1564), whose grandson, Henry (1562-1626), was canon of Worcester, and purchased the manor of Brockbury in the parish of Colwall, Herefordshire, which still remains in the family. Henry Arthur Bright, who on his mother's side was related to the late Lord Houghton, was educated at Rugby, under Tait, and at Trinity College, Cambridge, where he qualified for his degree, but as a nonconformist was unable to make the subscription then required as a condition of graduation. When this restriction had been removed, Bright and his relative James Heywood were the first nonconformists to take the Cambridge degrees of B.A. (1857) and M.A. (1860). On leaving Cambridge Bright became a partner with his father in the shipping firm of Gibbs, Bright, & Co., by whose enterprise regular communication was established between this country and Australia. Bright was chairman of the sailors' home in Canning Street in 1867, and again in 1877; in the latter year the dispensary in the Custom House arcade was opened mainly through his exertions, and in August 1878 a second sailors' home, projected by him, was opened in Luton Street. In 1865 he was placed on the commission of peace for the borough, and in 1870 for the county. He was a unitarian in religion, and from 1856 to 1860, by his counsels and by his pen, very much guided the policy of the 'Inquirer' newspaper towards conservative unitarianism. He wrote also in the 'Christian Reformer,' and contributed occasionally to the 'Christian Life,' established in 1876. But his catholicity of spirit may be seen in one of his most finished public speeches, at the Liverpool celebration of the Channing centennial (*Centenary Commemoration, &c.*, 1880, p. 176 seq.) In Liverpool he held a place unique in his time, but akin to that filled by William Roscoe in a previous generation, as a centre of literary interests and literary friendships. He was a member of the Roxburghe Club and of the Philobiblon Society, as well as of the local historical and literary societies. His personal intercourse with literary men and women was very extended and sympathetic, and was sustained by a wide correspondence, in which his own part was characterised by a singular fertility and charm. In the world of letters he will be best remembered by the frequent allusions to him in the 'Note-books' and biography of Hawthorne, whose acquaintance he made at Concord in 1852. The friendship was renewed and deepened in the following year, when Hawthorne became consul at Liverpool. In 1854 they made a tour in Wales together, and till Hawthorne's death the intimacy of their intercourse was not relaxed. As a literary critic Bright possessed great judgment and much felicity of expression. He wrote for the 'Examiner,' and contributed regularly to the 'Athenæum' from 1871. His great literary success was the 'Year in a Lancashire Garden,' 1879, a delicious narrative, in which the truth of nature and the poetry of literature are happily blended. In 1882 his health, never robust, began seriously to give way. He tried the effect of a sojourn in the south of France, and a winter at Bournemouth, but returned to Liverpool in the spring of 1884, and died on 5 May at his residence, Ashfield, Knotty Ash. In 1861 he had married Mary Elizabeth, eldest daughter of Samuel H. Thompson of Thingwall Hall, and left three sons and two daughters. Of his publications the following are of most interest: 1. 'A Historical Sketch of Warrington Academy,' 1859, 8vo (reprinted from the 'Transactions of the Historic Society of Lancashire and Cheshire,' vol. xi.; chiefly drawn up from original papers in his possession). 2. 'The Brights of Colwall,' 1872, 8vo (reprinted from 'The Herald and Genealogist,' vol. vii.) 3. 'Some Account of the Glenriddell MSS. of Burns's Poems,' 1874, 4to (these manuscripts had been deposited in the Liverpool Athenæum Library by the widow of Wallace Currie, son of Burns's biographer; Bright first made them known, communicating the unpublished matter to the 'Athenæum' of 1 Aug. 1874). 4. 'Poems from Sir Kenelm Digby's Papers,' 1877, 4to (edited for the Roxburghe Club from papers long in the possession of the Bright family). 5. 'A Year in a Lancashire Garden,' 1879, 8vo (first published, month by month, in the 'Gardener's Chronicle' for 1874; fifty copies were privately printed in 1875; the published volume has considerable additions; there are two editions, same year). 6. 'The English Flower Garden,' 1881, 8vo (originally contributed as an article to the 'Quarterly Review, April 1880). 7. 'Unpublished Letters from Samuel Taylor Coleridge to the Rev. John Prior Estlin,' 1884, 4to (printed for the Philobiblon Society; the letters belong to Coleridge's unitarian period, and include a previously unprinted poem). He contributed also a hymn ('To the Father through the Son') to 'Hymns, Chants, and Anthems,' 1858, edited by John Hamilton Thom for Renshaw Street unitarian chapel; and wrote (before 1858) 'The Lay of the Unitarian Church,' a spirited poem, originally contributed to a magazine ('Sabbath Leisure,'

edited by J. R. Beard, D.D.), and issued anonymously and without date as a tract about 1870. To the same magazine he contributed a prose tale, 'The Martyr of Antioch,' illustrating the early history of Arianism; part reprinted in the 'Christian Freeman.'

[The Brights of Colwall, p. 11; Christian Life, 10 & 17 May 1884; Athenæum, 10 May 1884; Times, 10 May 1884; Luard's Graduati Cantab., 1873, p. 53; Passages from the English Notebooks of N. Hawthorne, 1870, i. 105 &c.; N. Hawthorne and his Wife, 1885, ii. 21–7, &c. (contains nine letters from Bright); private information.] A. G.

BRIGHT, SIR JOHN (1619–1688), parliamentarian, of Carbrook and Badsworth, Yorkshire, born in 1619, was son of Stephen Bright (1583–1642), lord of the manor of Ecclesall, by his first wife, Jane, daughter of George Westby, of Whaley. He took up arms for the parliament at the outbreak of the civil war. He raised several companies in the neighbourhood of Sheffield, and received a captain's commission from Lord Fairfax. He was also named one of the sequestration commissioners for the West Riding (1 April 1643). About the same date he became a colonel of foot: 'He was but young when he first had the command, but he grew very valiant and prudent, and had his officers and soldiers under good conduct' (*Memoirs of Captain John Hodgson*, p. 102). He accompanied Sir T. Fairfax in his expedition into Cheshire, commanded a brigade at the battle of Selby, and on the surrender of the castle of Sheffield was appointed governor of that place (Aug. 1644), and a little later military governor of York. In the second civil war he served under Cromwell in Scotland, and also took part in the siege of Pontefract. On Cromwell's second expedition into Scotland, Bright threw up his commission when the army arrived at Newcastle, in consequence of the refusal of a fortnight's leave (HODGSON, *Memoirs*). Nevertheless he continued to take an active part in public affairs. In 1651 he was commissioned to raise a regiment to oppose the march of Charles II into England (*Cal. State Papers*, Dom. Ser.), and he undertook the same service in 1659, on the rising headed by Sir George Booth. In 1654 and 1655 he was high sheriff of Yorkshire, and he acted as governor of York and of Hull. He was M.P. for the East Riding 1654. He supported the Restoration, and on 16 July 1660 'was admitted into the order of baronets, having been previously knighted' (HUNTER). He died on 13 Sept. 1688. Sir John married four times. His only surviving issue was Catherine, by his first wife Catherine, daughter of Sir Richard Hawksworth, widow of William Lister, of Thornton in Craven. The daughter (*d.* 1703) married Sir Henry Liddell, Bart., of Ravensworth Castle, Durham.

[Hunter's History of Hallamshire (ed. Gatty), 3rd ed., contains the pedigree of Bright's family, and an account of his life; The Memoirs of Captain John Hodgson, who served under him, give some of the details of his military services; in the Fairfax Correspondence (Memoirs of the Civil Wars, i. 83–113), two of Bright's letters during the first civil war are printed, and the Baynes correspondence in the British Museum contains a large number of his letters relating to the financial affairs of his regiment; in the Thurloe State Papers, vi. 784, is a letter from Bright to Cromwell (Feb. 1658) resigning the government of Hull; there is an account of his funeral in Boothroyd's Pontefract, pp. 294–5.] C. H. F.

BRIGHT, JOHN (1783–1870), physician, was fourth son of Paul Bright (*d.* 1804), of Inkersall, Derbyshire, and educated at Wadham College, Oxford, where he graduated B.A. 1801 and M.D. 1808. He at first practised in Birmingham, and was appointed physician to the General Hospital in 1810, but before long he removed to London. He was elected fellow of the College of Physicians in 1809, was several times censor, and was Harveian orator in 1830. From 1822 to 1843 he was physician to the Westminster Hospital. From 1828 to 1845 he was lord chancellor's commissioner in lunacy, to which office he almost entirely limited himself for those years. He never practised extensively, having an ample private fortune. 'He was,' says the 'Lancet,' 'a most accomplished classical scholar, and may be said to have represented that old school of physicians whose veneration for Greek and Latin certainly exceeded their estimation of modern pathological research, and who valued an elegant and scholarly prescription before the most searching post-mortem report.' He died 1 Feb. 1870, aged 87.

[Munk's Coll. of Phys. (1878) iii. 79; Lancet, obit. notice, 12 Feb. 1870.] G. T. B.

BRIGHT, MYNORS (1818–1883), decipherer of Pepys, born in 1818, was the son of John Bright (the subject of the previous article), and of Eliza his wife (*College Books*). He was educated at Shrewsbury, and entered Magdalene College, Cambridge, on 3 July 1835. He was a senior optime in mathematics, and took a second-class in classics. He proceeded B.A. in 1840, and M.A. in 1843. He became foundation-fellow, tutor, and eventually president of Magdalene, and was chosen proctor in 1853. The Pepysian library being at Magdalene, Bright resolved to re-decipher the whole of Pepys's 'Diary,' and to this end he learnt the cipher from Shelton's 'Tachygraphy.' In 1873 he retired from Magdalene, and left Cambridge for London. His 'Pepys' was printed

between 1875 and 1879, and was published simultaneously in 4to and 8vo, 6 vols. each. The edition includes engravings of Faithorne's 'Map of London,' 1658, and Evelyn's 'Posture of the Dutch Fleet,' 1667. It corrects numerous errors occurring in the original decipherment, and inserts many passages hitherto suppressed. A complete reissue of Bright's transcript was edited by H. B. Wheatley in 10 vols. in 1893–1899.

Bright became paralysed about 1880, and died on 23 Feb. 1883, aged 65. He never married. Part of his interest in his 'Pepys' he bequeathed to Magdalene College. His portrait was painted by F. Dickenson, and presented by his friends to his college.

[Magdalene College Books; Le Neve's Fasti (Hardy), iii. 635; Academy, No. 565, p. 151; Crockford's Clergy List, 1882; Athenæum, No. 2888, p. 280; Bright's Pepys's Diary, Preface, i. pp. vii, viii, ii. p. viii.] J. H.

BRIGHT, RICHARD (1789–1858), physician, born at Queen Square, Bristol, on 28 Sept. 1789, was the third son of Richard Bright, a merchant and banker of that city. The father belonged to the family of the Brights of Brockbury, Herefordshire, who trace their descent from Henry Bright, D.D. (*d.* 1626), master of the King's School at Worcester in Queen Elizabeth's time. In 1808 he matriculated at the university of Edinburgh in the faculty of arts, attending the instructions of Dugald Stewart, Playfair, and Leslie in their respective subjects, and in the next year entered the medical faculty, where his teachers were Hope, Monro, and Duncan.

In the summer of 1810 he was invited to join Sir George Stuart Mackenzie and Mr. (afterwards Sir Henry) Holland on a visit to Iceland, which occupied some months. To the account of this voyage, written by Sir George Mackenzie ('Travels in Iceland,' Edinburgh, 1811), Bright contributed chapters on botany and zoology. He also brought back with him a large collection of dried plants; and though this journey must have been a serious interruption to his professional studies, doubtless it had its use in training his great powers of exact observation.

On returning from Iceland, Bright pursued his medical studies in London, living for two years in the house of one of the resident officers of Guy's Hospital. Here he attended the medical lectures of Dr. W. Babington and James Currie, and studied anatomy and surgery in the united school of Guy's and St. Thomas's, under Astley Cooper, the two Clines, and Travers. It is supposed that from Astley Cooper he imbibed a sense of the value of morbid anatomy in the study of disease; and even at that time he executed a drawing, since preserved, of the appearance of the kidney in that malady, by the investigation of which he afterwards made himself famous. At the same time he became interested in the study of geology, probably through the example of Dr. William Babington, and in 1811 he read a paper to the Geological Society on the strata in the neighbourhood of Bristol.

In 1812 Bright returned to Edinburgh, where the celebrated Dr. Gregory was his principal teacher in medicine, and where he still pursued the study of geology and natural history under Professor Jameson. He graduated M.D. on 13 Sept. 1812, with a dissertation, 'De Erysipelate Contagioso.' It was at that time his intention to graduate also at Cambridge, and accordingly he entered at Peterhouse, of which college his brother was a fellow; but after having kept two terms he found residence in college incompatible with his other pursuits, and left the university. Bright then returned to London, and became a pupil at the public dispensary under Dr. Bateman. But his love of travel again carried him away from London, and in 1814, when the continent became open to English travellers, he made a tour through Holland and Belgium to Berlin, where he spent some months, attending the hospital practice of Horn and Hufeland, besides profiting by the acquaintance of other eminent men of science. From Berlin he passed to Vienna, where he spent the winter of 1814–15.

What is known as the old Vienna School of Medicine was then in high repute, and Hildenbrand was the chief clinical professor; but Bright was also much impressed by the then celebrated John P. F. Frank. The political interest of the congress then sitting also engaged much of Bright's attention, and he refers to it in an account of his travels which he afterwards published. In the spring he extended his journey to Hungary, but returned in the summer in time to reach Brussels a fortnight after the battle of Waterloo. Here the immense military hospitals, crowded with sufferers after the great battle, supplied matter of professional interest which naturally delayed his homeward journey.

On 23 Dec. 1816 Bright was admitted a licentiate of the College of Physicians. Soon after he was made assistant physician to the London Fever Hospital, and filled the same office for a short time at the Public Dispensary. In the fever hospital he contracted a severe attack of fever which nearly cost him his life. Whether in consequence of this illness, or from other reasons, it is curious to note that Bright was in 1818 again induced to

set out on continental travel, and spent the greater part of a year in a tour through Germany, Italy, and France. In the year 1820, however, he finally settled down in London, in Bloomsbury Square; and being in the same year elected assistant-physician to Guy's Hospital, he commenced that course of arduous clinical study and indefatigable industry as a teacher which made his own reputation, and contributed much to raise that of the school in which he worked. In 1824 he was made full physician, and occupied this post till 1843, when, on resigning, he was made consulting physician.

Bright's energy and industry in his hospital work were very remarkable. For some years he is said to have spent six hours a day in the wards or post-mortem room, and he was an active lecturer in the medical school. In 1822 he gave a course on botany in relation to materia medica, which was continued for three years. In 1823 he began to give clinical lectures; in 1824 he took part in the medical lectures with Dr. Cholmley, and afterwards for many years shared the course with Dr. Addison. The outcome of their joint labours was the commencement of a text-book, 'Elements of the Practice of Medicine,' of which, however, only one volume appeared in 1839, and this was understood to be chiefly the composition of Addison.

In 1827 he published the first volume of a collection of 'Reports of Medical Cases,' intended to show the importance of morbid anatomy in the study of disease. In this he gave the first account of those researches on dropsy with which his name is inseparably connected, though his first observation on the subject was made, he says, in 1813. While the symptom dropsy, or watery swelling, had been known from the earliest period of medicine, it had been, shortly before Bright's time, shown by Blackall and Wells that it was in many cases connected with a special symptom, namely, that the urine was coagulable by heat, from the presence in it of albumen. But these two symptoms were not traced to their source, or connected with a diseased condition of any organ. Bright, by his investigations of the state of the body after death, ascertained that in all such cases a peculiar condition of the kidneys was present, and thus proved that the symptoms spoken of were really those of a disease of the kidneys. The explanation once given seems as simple as 'putting two and two together;' but the importance of the discovery is shown by the fact that no one before had suspected the kidney to be the organ implicated. It proved Bright not only to be an acute observer, but to possess the much rarer faculty of synthesis, which makes an observer a discoverer. The truth and importance of his researches were soon generally recognised. In a short time Morbus Brightii, or Bright's Disease, was a familiar appellation over the whole of Europe, and will doubtless preserve the memory of Bright so long as the disease is known by a separate name. Next to Laennec's discoveries in chest diseases, this of Bright's is perhaps the most important special discovery made in medicine in the first half of the nineteenth century.

The volume of medical reports contained, besides those on dropsy, other observations, which would alone have made the book a very valuable one. It was followed in 1831 by a second volume, in two parts, containing reports on diseases of the brain and nervous system, full of observation of the highest value. Both volumes are illustrated with admirable plates, and taken together form one of the most important contributions to morbid anatomy ever made in this country by one person.

In 1836 appeared the first volume of the well-known 'Guy's Hospital Reports,' to which Bright was from the first a copious contributor. The first and second papers in the first volume, on the 'Treatment of Fever' and on 'Diseased Arteries of the Brain' respectively, are by him, as are also six other papers in the same volume, of which the most important are 'Cases and Observations illustrative of Renal Disease,' and 'A Tabular View of the Morbid Appearances in One Hundred Cases of Albuminous Urine.' The two last mentioned extend and support his great discovery by several additional developments, which subsequent research has done nothing but confirm. In the second volume are two papers by Bright—one on 'Abdominal Tumours,' which was the first of an important series continued by two papers in the third volume of the 'Reports,' one in the fourth, and one in the fifth. This same fifth volume also contains an important paper entitled 'Observations on Renal Diseases: Memoir the Second.' In the first volume of the second series (1843) appears an account of observations made under the superintendence of Bright by Dr. Barlow and Dr. Owen Rees on patients with albuminous urine; but after this Bright's name does not appear in the reports.

Bright's professional success, apart from his hospital work, was steady, if not rapid. On 25 June 1832 he was promoted from being a licentiate to the fellowship of the College of Physicians, at that time a rare distinction. He was Gulstonian lecturer in 1833, and took as his subject 'The functions of the

abdominal viscera, with observations on the diagnostic marks of the diseases to which the viscera are subject.' In 1837 he was Lumleian lecturer, his subject being 'Disorders of the brain.' He was censor in 1836 and 1839, and a member of the council 1838 and 1843. He was elected fellow of the Royal Society in 1821, and received the Monthyon medal from the Institute of France. In 1837, on the accession of Queen Victoria, he was appointed physician extraordinary to her majesty. In the earlier part of his career it is said that his practice was not large; but as his reputation rose he took the leading position as consulting physician in London, and was probably consulted in a larger number of difficult cases than any of his contemporaries. Bright was twice married; first to the youngest daughter of Dr. William Babington [q. v.] The only son by this marriage took holy orders, but died young. His second wife was a daughter of Mr. Benjamin Follett, and sister of Sir William Webb Follett. She survived him, as did three sons and two daughters. His eldest son is now (1886) master of University College, Oxford; his youngest a physician in practice at Cannes. He died at his house, 11 Savile Row, on 16 Dec. 1858, after a very short illness, which, however, was shown by post-mortem examination to have been the consequence of long-standing disease of the heart. He was buried at Kensal Green cemetery, and a mural monument was erected to his memory in St. James's Church, Piccadilly. The College of Physicians possesses his portrait in oils, and also a marble bust; another bust is at Guy's Hospital, and his portrait is engraved in Pettigrew's 'Medical Portrait Gallery.'

Bright was by general admission a man of fine and attractive nature. From early manhood he was animated by a genuine love of truth and unswerving sense of duty. He was of an affectionate disposition and uniformly cheerful. He was widely accomplished, a good linguist (when this kind of knowledge was less common than it is now), well versed in more than one science, a creditable amateur artist, and possessed of much taste in art; well cultivated on all sides by travel and society. In his intellectual character the first feature which strikes us is a certain simplicity. Beyond most observers he succeeded in viewing objects without prejudice. Not putting forward any theories himself, he was not biassed by any of the prevailing systems of medicine. Next, he had a remarkable tact, which appeared to be exercised unconsciously, of picking out the important facts in any subject, and, perhaps half unconsciously also, of combining them together so as to explain each other. He is said not to have perceived the true value of his own observations, and this is quite credible, but his genius guided him to the right result. Moreover, his industry was indefatigable. He amassed hundreds and thousands of facts, and his minute accuracy of observation was never or rarely at fault.

Bright was not generally regarded as a brilliant man; he had little power of exposition, and in his own school, while his fame was rapidly spreading over the civilised world, he was less popular and impressive as a teacher than his brilliant colleague Thomas Addison [q. v.], though the latter was much less known to the outside public. 'Bright could not theorise,' says Dr. Wilks, 'and fortunately gave us no doctrines and no "views;" but he could *see*, and we are struck with astonishment at his powers of observation. . . . I might allude to the fact that he was one of the first who described acute yellow atrophy of the liver, pigmentation of the brain in miasmatic melanæmia, condensation of the lung in whooping-cough. He was also the first, I believe, who noted the bruit in chorea, and he made also many other original clinical observations' (Wilks, 'Historical Notes on Bright's Disease,' &c., *Guy's Hosp. Reports*, xxii. 259). These minor researches display the same powers as his master work, and have been thought to show even greater originality. It is the importance of its subject and the powerful influence which it has had, and continues to have, on the progress of medicine in all countries, that give to this discovery its classical position, and place Bright among the half-dozen greatest names in the honourable roll of English physicians.

His writings were, besides those mentioned above: 1. 'Travels from Vienna through Lower Hungary, with some remarks on the State of Vienna during the Congress in 1814,' 4to, Edinburgh, 1818. 2. 'Address at the Commencement of a Course of Lectures on the Practice of Medicine,' 8vo, London, 1832. 3. 'Clinical Memoirs on Abdominal Tumours,' edited by G. H. Barlow, M.D. (from 'Guy's Hospital Reports'), New Syd. Soc., 8vo, London, 1860. 4. 'Gulstonian Lectures on the Functions of the Abdominal Viscera,' in 'London Medical Gazette,' 1833. In the 'Medico-Chirurgical Transactions:' (1) 'Case of unusually Profuse Perspiration,' xiv. 433, 1828; (2) 'Cases of Disease of the Pancreas and Duodenum,' xviii. 1, 1833; (3) 'Cases illustrative of Diagnosis when Adhesions have taken place in the Peritoneum,' xix. 176, 1835; (4) 'Cases of Spasmodic Disease accompanying Affections of the Pericardium,' xxii. 1, 1839. In 'Guy's Hospital Reports,' vol. i.: 'Case of

Tetanus successfully treated;' 'Account of a Remarkable Displacement of the Stomach;' 'Observations on Jaundice;' 'Observations on the Situation and Structure of Malignant Diseases of the Liver.' Vol. ii.: 'Cases illustrative of Diagnosis where Tumours are situated at the Base of the Brain.' In 'Transactions of the Geological Society:' 'On the Strata in the Neighbourhood of Bristol,' 1811, and 'On the Hills of Badaeson, Szigliget, &c., in Hungary,' 1818.

BRIGHT, TIMOTHY, M.D. (1551?–1615), the inventor of modern shorthand, was born in or about 1551, probably in the neighbourhood of Sheffield. He matriculated as a sizar at Trinity College, Cambridge, 'impubes, æt. 11,' on 21 May 1561, and graduated B.A. in 1567–8. In 1572 he was at Paris, probably pursuing his medical studies, when he narrowly escaped the St. Bartholomew massacre by taking refuge in the house of Sir Francis Walsingham, together with many other Englishmen who were 'free from the papistical superstition.' Bright refers to this memorable occasion in several of his writings. In dedicating to Sir Francis Walsingham his 'Abridgment of Fox' (1589) he mentions among the favours he had received from him 'that especiall protection from the bloudy massacre of Paris, nowe sixteene yeeres passed; yet (as euer it will bee) fresh with mee in memory.' He adds that Walsingham's house was at that time 'a very sanctuarie, not only for all of our nation, but euen to many strangers, then in perill, and vertuously disposed;' and he further says, 'As then you were the very hande of God to preserue my life, so haue you (ioyning constancie with kindnes) beene a principall means, whereby the same hath beene since the better sustained.' Again, in his dedication of his 'Animadversions on Scribonius' to Sir Philip Sidney (1584), Bright remarks that he had only seen him once, 'idque illa Gallicis Ecclesiis funesta tempestate (cujus pars fui, et animus meminisse horret, luctuque refugit) mat utinibus Parisiensibus.'

He graduated M.B. at Cambridge in 1574, received a license to practise medicine in the following year, and was created M.D. in 1579. For some years after this he appears to have resided at Cambridge, but in 1584 he was living at Ipswich. He was one of those who were present on 1 Oct. 1585 when the statutes of Emmanuel College, Cambridge, were confirmed and signed by Sir Walter Mildmay, and delivered to Dr. Laurence Chaderton, the first master of the college (*Documents relating to the Univ. and Colleges of Camb.* iii. 523). The dedication to Peter Osborne of his 'Treatise on Melancholy' is dated from 'litle S. Bartlemewes by Smithfield,' 23 May 1586. He occupied the house then appropriated to the physician to the hospital. He succeeded Dr. Turner in that office about 1586, and must have resigned in 1590, as his successor was elected on 19 Sept. in that year (*MS. Journals of St. Bartholomew's Hospital*). His first medical work (dated 1584) seems to have been written at Cambridge, and is in two parts: 'Hygieina, on preserving health,' and 'Therapeutica, on restoring health.' The worth of the book is fairly exhibited in the part on poisons, where the flesh of the chameleon, that of the newt, and that of the crocodile are treated as three several varieties of poison, each requiring a peculiar remedy. Bright's preface implies that he lectured at Cambridge, for he asserts that he had been asked to publish the notes from which he taught. He dedicates both parts to Cecil, as chancellor of the university, and speaks as if he knew him and his family. He praises the learning of Lady Burghley, and says the 'domus Cæciliana' may be compared to a university. 'Cecil himself has paid,' he says, 'so much attention to medicine that in the knowledge of the faculty he may almost be compared to the professors of the art itself.' His 'Treatise of Melancholie' is as much metaphysical as medical. One of the best passages in it is a chapter in which he discusses the question 'how the soule by one simple faculty performeth so many and diverse actions,' and illustrates his argument by a description of the way in which the complicated movements of a watch proceed from 'one right and straight motion' (*St. Bartholomew's Hospital Reports*, xviii. 340).

Bright afterwards abandoned the medical profession and took holy orders. His famous treatise entitled 'Characterie' he dedicated in 1588 to Queen Elizabeth, who on 5 July 1591 presented him to the rectory of Methley in Yorkshire, then void by the death of Otho Hunt, and on 30 Dec. 1594 to the rectory of Berwick-in-Elmet, in the same county. He held both these livings till his death; the latter seems to have been his usual place of abode; there, at least, he made his will, on 9 Aug. 1615, in which he leaves his body to be buried where God pleases. It was proved at York on 13 Nov. 1615. No memorial is to be found of Bright in either of his churches

He left a widow, whose name was Margaret, and two sons, Timothy Bright, barrister-at-law, of Melton-super-Montem in Yorkshire, and Titus Bright, who graduated M.D. at Peterhouse, Cambridge, in 1611, and practised at Beverley. He had also a daughter Elizabeth.

Subjoined is a list of his works: 1. 'An Abridgment of John Foxe's "Booke of Acts and Monumentes of the Church,"' London, 1581, 1589, 4to; dedicated to Sir Francis Walsingham. 2. 'Hygieina, id est De Sanitate tuenda, Medicinæ pars prima,' London, 1581, 8vo; dedicated to Lord Burghley. 3. 'Therapeutica; hoc est de Sanitate restituenda, Medicinæ pars altera;' also with the title 'Medicinæ Therapeuticæ pars: De Dyscrasia Corporis Humani,' London, 1583, 8vo; dedicated to Lord Burghley. Both parts reprinted at Frankfort, 1688–9, and at Mayence 1647. 4. 'In Physicam Gvlielmi Adolphi Scribonii, post secundam editionem ab autore denuò copiosissimò adauctam, & in iii. Libros distinctam, Animaduersiones,' Cambridge, 1584, 8vo; Frankfort, 1593, 8vo; dedication to Sir Philip Sidney, dated from Ipswich. 5. 'A Treatise of Melancholie, Containing the cavses thereof, & reasons of the strange effects it worketh in our minds and bodies: with the phisicke cure, and spirituall consolation for such as haue thereto adioyned an afflicted conscience,' London (Thomas Vautrollier), 1586, 8vo; another edition, printed the same year by John Windet. This is said to be the work which suggested Burton's well-known 'Anatomy of Melancholy.' 6. 'Characterie. An Arte of shorte, swifte, and secrete writing by character. Inuented by Timothe Bright, Doctor of Phisicke. Imprinted at London by I. Windet, the Assigne of Tim. Bright, 1588. Cum priuilegio Regiæ maiestatis. Forbidding all others to print the same,' 24mo. 7. 'Animadversiones de Traduce,' in Goclenius's Ψυχολογία, Marpurg, 1590, 1594, 1597.

Bright will ever be held in remembrance as the inventor of modern shorthand-writing. The art of writing by signs originated among the Greeks, who called it σημειωγραφία. Few specimens of Greek shorthand are extant, and little is known on the subject. From the Greeks the knowledge of the art passed to the Romans, among whom it was introduced by Cicero, who devised many characters, which were termed *notæ Tironianæ*, from Cicero's freedman Tiro, a great proficient in the art. In the darkness which overwhelmed the world on the fall of the Roman empire the knowledge of the *notæ* was utterly lost, and therefore Bright may be justly regarded as an original inventor, inasmuch as the secret of the ancient shorthand was not unravelled until the beginning of the present century. Only one copy of Bright's 'Characterie' (1588) is known to be in existence. It formerly belonged to the Shakespearean scholar, Francis Douce, and is now preserved in the Bodleian Library at Oxford. It is a small volume, in good preservation, but the shorthand signs are all written in ink which is rapidly fading. Transcripts of it in manuscript are possessed by Mr. J. E. Bailey, F.S.A., Mr. Edward Pocknell, and Dr. Westby-Gibson. In the dedication of this rare, and now famous, book to Queen Elizabeth, the author thus describes the nature and objects of his invention: 'Cicero did account it worthie his labour, and no less profitable to the Roman common weale (Most gratious Soueraigne) to inuent a speedie kinde of wryting by Character, as Plutarch reporteth in the life of Cato the yonger. This invention was increased afterwards by Seneca; that the number of characters grue to 7000. Whether through iniurie of time, or that men gaue it over for tediousness of learning, nothing remaineth extant of Ciceros invention at this day. Upon consideration of the great vse of such a kinde of writing I haue inuented the like: of fewe Characters, short and easie, euery Character answering a word: My Inuention meere English, without precept or imitation of any. The uses are diuers: Short that a swifte hande may therewith write orations, or publike actions of speach, vttered as becometh the grauitie of such actions, verbatim. Secrete as no kinde of wryting like. And herein (besides other properties) excelling the wryting by letters and Alphabet, in that, Nations of strange languages, may hereby communicate their meaning together in writing, though of sundrie tongues.' Queen Elizabeth, by letters patent dated 26 July 1588, granted to Bright for a period of fifteen years the exclusive privilege of teaching and of printing books, 'in or by Character not before this tyme commonlye knowne and vsed by anye other oure subiects' (*Patent Roll*, 30 Eliz. part 12). An elaborate explanation of Bright's system is given by Mr. Edward Pocknell in the magazine 'Shorthand' for May 1884. The system has an alphabetical basis, but as the signs for the letters are not sufficiently simple to be capable of being readily joined to one another, the method is only alphabetical as regards the initial letter of each word, the remainder of the 'character' representing the word being purely arbitrary. In fact, the alphabet was too clumsy to be regularly applied to the whole of a word, as was done only fourteen years later by John Willis, whose scheme, explained in the 'Art of Stenographie' (1602), is the foundation of all the later systems of shorthand. Among the Lans-

downe MSS. (No. 51, art. 57) is a copy of the book of Titus in 'characterie,' written by Bright himself in 1586. The signs in this specimen, which are written in vertical columns, like Chinese, appear to differ in some respects from the system published two years afterwards. The Additional MS. 10037 contains 'The Divine Prophecies of the ten Sibills, upon the birthe of our Saviour Christ,' in English verse, beautifully written on vellum by Jane Seager, in an Italian hand, and also in the shorthand invented by Bright, and presented by her to Queen Elizabeth. It may be added that 'A Treatise upon Shorthand, by Timothye Bright, Doctor of Physicke, together with a table of the characters,' was sold at the sale of Dawson Turner's manuscripts in 1859. It had formerly belonged to Sir Henry Spelman.

BRIGHTMAN, THOMAS (1562–1607), biblical commentator, was born at Nottingham, admitted a pensioner at Queens' College, Cambridge, in 1576, of which he became fellow in 1584. He graduated B.A. in 1580–1, M.A. in 1584, B.D. in 1591. In 1592, on the recommendation of Dr. Whitaker, Sir John Osborne gave him the rectory of Hawnes in Bedfordshire, with the profits of the benefice for the two preceding years. Brightman frequently discussed in his college church ceremonies with George Meriton, afterwards dean of York. As a preacher he was celebrated, though his disaffection to church establishment was no secret. It is said that he subscribed the 'Book of Discipline.' He persuaded himself and others that a work he wrote on the Apocalypse was written under divine inspiration. In it he makes the church of England the Laodicean church, and the angel that God loved the church of Geneva and the kirk of Scotland. The great object of this puritan's system of prophecy in a commentary on Daniel, as well as in his book on the Apocalypse, was to prove that the pope is that anti-Christ whose reign is limited to 1290 days or years, and who is then foredoomed by God to utter destruction. His life, says Fuller, was most angelical, by the confession of such as in judgment dissented from him. His manner was always to carry about a Greek testament, which he read over every fortnight, reading the Gospels and the Acts the first, the Epistles and the Apocalypse the second week. He was little of stature, and (though such are commonly choleric) yet never known to be moved with anger. His desire was to die a sudden death. Riding on a coach with Sir John Osborne, and reading a book (for he would lose no time), he fainted, and, though instantly taken out, died on the place on 24 Aug. 1607. He was buried, according to the parish register, on the day of his death at Hawnes. There is an inscription to him in the chancel. He was a constant student, much troubled before his death with obstructions of the liver and gall-duct, and is supposed by physicians to have died of the latter. He was never married. His funeral sermon was preached by Edward Bulkley, D.D., sometime fellow of St. John's College, Cambridge, and rector of Odell in Bedfordshire. His works in their chronological order are: 1. 'Apocalypsis Apocalypseos, idest Apocalypsis D. Joannis analysi et scholiis illustrata; ubi ex Scriptura sensus, rerumque prædictarum ex historiis eventus discutiuntur. Huic Synopsis præfigitur universalis, et Refutatio Rob. Bellarmini de antichristo libro tertio de Romano Pontifice ad finem capitis decimi septimi inseritur,' Franc. 1609, 4to, Heidelb. 1612, 8vo. 2. 'Antichristum Pontificiorum monstrum fictitium esse,' Ambergæ, 1610, 8vo. 3. 'Scholia in Canticum Canticorum. Explicatio summè consolatoria partis ultimæ et difficillimæ prophetiæ Danielis a vers. 36 cap. 11 ad finem cap. 12, qua Judæorum, tribus ultimis ipsorum hostibus funditus eversis, restitutio, et ad fidem in Christum vocatio, vivis coloribus depingitur,' Basil, 1614. At Leyden, 1616, and again at London, 1644, was printed a translation of the 'Apocalypsis,' 'with supply of many things formerly left out.' At London, 1635, 1644, 4to, a translation of his 'Explication of Daniel.' 4. 'The Art of Self Denial, or a Christian's first lesson,' Lond. 1646.

BRIGHTWELL, CECILIA LUCY (1811–1875), etcher and authoress, was born at Thorpe, near Norwich, on 27 Feb. 1811, the eldest child of Thomas Brightwell (born at Ipswich 18 March 1787, died at Norwich 17 Nov. 1868), by his first wife, Mary Snell (born 1788, died 6 Nov. 1815), daughter of William Wilkin Wilkin, of Cossey, or Costessey, near Norwich, and Cecilia Lucy (Jacomb), a lineal descendant of Thomas Jacomb, D.D., ejected from St. Martin's, Ludgate. Simon Wilkin, uncle of Miss Brightwell, edited the works of Sir Thomas Browne. Her father, a nonconformist solicitor, mayor of Norwich in 1837, was a man of scientific tastes, a good microscopist, and contributor to many scientific journals. The *Asplanchna Brightwellii*, a rotiferous animalcule, was discovered by him. He published 'Notes on the Pentateuch,' 1840, 12mo, a compilation, with original notes on natural history; and printed 100 copies of 'Sketch of a Fauna Infusoria for East Norfolk,' 1848 (unpublished). In the preparation of the latter work he was materially assisted by his daughter (a pupil of John Sell Cotman), who drew and lithographed the figures of the various species noted. Miss Brightwell, who was a good Italian scholar and a remarkably able etcher, owed little to teachers, and followed her own methods. She went little into society. Her philanthropic spirit was shown in her exertions and contribution of 180*l.* for the 'Brightwell' lifeboat put on the Norfolk coast at Blakeney. Her writings (many of them published by the Religious Tract Society) were mainly biographical, and written for the young. Of most importance is her first work, the 'Life of Amelia Opie,' 1854; her father was Mrs. Opie's friend and executor. For some years before her death she was afflicted with cataract, from which her father had also suffered. She died at Norwich on 17 April 1875, and was buried at the Rosary, beside her father. A local print gives the following as a complete list of her unpublished etchings: After Rembrandt: the 'Mill;' the 'Long Landscape;' a Dutch landscape; 'Amsterdam;' another landscape and two figure subjects (from original drawings and etchings in the British Museum. A copy of her reproduction of the 'Long Landscape' is placed beside the original in the British Museum, and has deceived good judges). After Dürer: 'Ecce Homo' (from etching); 'Ecce Homo' (from woodcut). From painting by Richard Wilson, formerly in her father's possession. Twelve figure subjects, including etchings from Raffaello and Fuseli. After Annibale Caracci: 'Holy Family' (from etching). After Marc Antonio Raimondi: 'Dancing Cupids' (from etching). Two small sea subjects from Ruysdael and J. S. Cotman. From nature: 'Bardon Hall, Leicestershire' (seat of descendants of Dr. Jacomb); 'Bradgate Hall, Leicestershire;' 'Flordon Common;' 'Village Street, Flordon;' 'Graves of Ejected Ministers at Oakington, Cambridgeshire;' two landscapes with cottages; landscape in the Dutch manner; etching and drawing of a cobbler at his bench. Among her published etchings were: Two views of Mr. Page's house, Ely, formerly residence of Oliver Cromwell (etched in two sizes, but only the larger were published); two views of Ranworth Decoy (in Lubbock's 'Fauna of Norfolk'); 'Bromeholme Priory' (frontispiece to Green's 'History of Bacton'). Her writings were: 1. 'Memorials of the Life of Amelia Opie, selected and arranged from her Letters and Diaries and other manuscripts,' Norwich and London, 1854, 8vo; 2nd ed. 1855, 12mo (preface by Thomas Brightwell). 2. 'Palissy the Huguenot Potter, a Tale,' 1858, 12mo; another edition, 1877, 12mo. 3. 'Life of Linnæus,' 1858, 12mo. 4. 'Heroes of the Laboratory and Workshop,' 1859, 12mo; 2nd ed. 1860, 12mo. 5. 'Difficulties overcome: Scenes in the Life of A. Wilson,' 1860, 12mo. 6. 'Romance of Incidents in the Lives of Naturalists,' 1861, 8vo. 7. 'Footsteps of the Reformers,' 1861, 8vo. 8. 'Byepaths of Biography,' 1863, 12mo. 9. 'Above Rubies: Memorials of Christian Gentlewomen,' 1864, 12mo. 10. 'Early Lives and Doings of Great Lawyers,' 1866, 12mo. 11. 'Annals of Curious and Romantic Lives,' 1866, 12mo. 12. 'Annals of Industry and Genius,' new edition, 1869, 8vo; another edition, 1871, 8vo. 13. 'Memorials of the Life of Mr. Brightwell of Norwich,' 1869, 8vo (printed for private circulation). 14. 'The Romance of Modern Missions,' 1870, 8vo. 15. 'Georgie's Present, or Tales of Newfoundland,' 1871, 12mo. 16. 'Memorial Chapters in the Lives of Christian Gentlewomen,' 1871, 12mo. 17. 'Nurse Grand's Reminiscences at Home and Abroad,' 1871, 8vo. 18. 'My Brother Harold, a Tale,' 1872, 8vo. 19. 'Lives of Labour: Eminent Naturalists,' 1873, 12mo. 20. 'Men of Mark, a Book of Short Biographies,' 1873, 8vo; another edition, 1879, 8vo. 21. 'So Great Love: Sketches of Missionary Life and Labour,' 1874, 8vo (her last publication).

[Memorials of Mr. Brightwell, 1869; Norwich newspapers, April 1875; private information.]

A. G.

BRIGIT, SAINT, of Kildare (453–523), was born at Fochart, now Faugher, two miles north

of Dundalk, a district which was formerly part of Ulster. Her father, Dubhthach, was of the race of Eochaidh Finnfuathairt, grandson of Tuathal Teachtmhar, monarch of Erinn. Her mother Brotsech, or Broiccseach, who belonged to the Dal Conchobar of South Bregia, was the bondmaid and concubine of Dubhthach. Dr. Lanigan will not hear of this, but the whole early history of Brigit, as told in the Irish life, rests on this fact. It may be observed that in this (as in other cases) there is a notable difference between the story told by Colgan and Lanigan from the Latin lives and the story given in the Irish life. In the former Brigit is a highly educated young lady of noble birth, whose acts are in accordance with the ecclesiastical and social usages of the seventeenth or eighteenth century. In the latter we breathe the atmosphere of an early age, where all is simple and homely, and peculiar customs in church and state meet us, nor did it appear to the writer that the accident of Brigit's birth should lessen our respect for her character and labours. It was an age when slavery existed in Ireland, and the relations between Dubhthach and his bondmaid excited the jealousy of his wife, in consequence of which he had eventually to sell her, retaining, however, a right to her offspring. Bought by a wizard, she was taken by him to Fochart, and there in due time Brigit was born A.D. 453. Here a legend is related, which is of some interest. The mother having gone out one day and left the child covered up in the house, 'the neighbours saw the house wherein was the girl all ablaze, so that the flame reached from earth to heaven; but when they went to rescue the girl the fire appeared not.' This is one of those references to fire which occur so frequently in connection with St. Brigit as to lead to the conclusion that we have here 'incidents which originally belonged to the myth or ritual of some goddess of fire' (STOKES). A similar conclusion has been drawn by Schröder from the legend of the demon smiths in the 'Navigation of St. Brendan,' which 'rests, he thinks, on the ground of a Celtic myth of Fire-giants.' It is suggestive that a goddess of the Irish pantheon who presided over smiths was named Brigit, which is interpreted in Cormac's 'Glossary' *breo-shaigit*, 'the fiery arrow.' Giraldus Cambrensis tells us that at Kildare St. Brigit had a perpetual ashless fire watched by twenty nuns, of whom herself was one, blown by fans or bellows only, and surrounded by a hedge, within which no male could enter.

As the child Brigit grew up, 'everything her hand was set to used to increase and reverence God; she bettered the sheep; she tended the blind; she fed the poor.' But when she came to years of reflection she wished to go home, and the wizard having communicated with her father, he came for her and took her home. There her first care was for her foster mother, but she was not idle; she tended the swine, herded the sheep, and cooked the dinner, and it is characteristic that when 'a miserable greedy hound came into the house' she gave him a considerable part of the repast. And now the thought of her mother in bondage troubled her; she asked her father's leave to go to her, but 'he gave it not,' so she went without it. 'Glad was her mother when she arrived,' for she was toil-worn and sickly. So Brigit took the dairy in hand, and all prospered, and in the end the wizard and his wife became christians. Her success in the conversion of the people, then chiefly heathen, is referred to in Broccan's hymn, where she is said to be 'a marvellous ladder for pagans to visit the kingdom of Mary's Son.' On becoming a Christian the wizard generously said to her: 'The butter and the kine that thou hast milked I offer to thee; thou shalt not abide in bondage to me, serve thou the Lord.' 'Take thou the kine,' she replied, 'and give me my mother's freedom.' But he gave her both, and so she dealt out the kine to the poor and needy, and returned with her mother to Dubhthach's house.

Some time after, Dubhthach and his consort determined to sell her, as 'he liked not his cattle and wealth to be dealt out to the poor, and that is what Brigit used to do.' Taking her in his chariot to the king of Leinster, he offered to sell her to him. 'Why sellest thou thine own daughter?' said the king. 'She stayeth not,' replied Dubhthach, 'from selling my wealth and giving it to the poor.' The king said, 'Let the maiden come into the fortress.' When she was before him he said, 'Perhaps if I bought you you might do the same with my property.' 'The Son of the Virgin knoweth,' she replied, 'if I had thy might, with all Leinster, and with all thy wealth, I would give them to the Lord of the Elements.' The king then said 'her father was not fit to bargain for her, for her merit was higher before God than before men.' And thus the maiden obtained her freedom.

Dubhthach then tried to get her married, but she refused all offers, and at last he had to consent to her 'dedicating herself to the Lord.' On the occasion of her taking the veil 'the form of ordaining a bishop was read over her by Bishop Mel.' What this means it is not easy to say; but it is probably intended to convey that he invested her with a rank

corresponding with that of bishop in point of authority, for that it was only a nominal title appears from her associating with herself, as we shall see presently, a bishop who is described as 'the anointed head and chief of all bishops, and she the most blessed chief of all virgins' (Todd, p. 12). Some time after, having gone to King Dunlaing to make a request, one of his slaves offers to become a christian if she will obtain his freedom. She therefore asks the two favours, saying, 'If thou desirest excellent children, and a kingdom for thy sons, and heaven for thyself, give me the two boons I ask.' The answer of the pagan king is quite in character: 'The kingdom of heaven, as I see it not, and as no one knows what thing it is, I seek not; and a kingdom for my sons I seek not, for I shall not myself be extant, and let each one serve his time. But give me length of life and victory always over the Húi Néill.'

The great event of her life was the foundation of Kildare (*cill dara*, 'the church of the oak'). Cogitosus (830–835) has left us a description of this church as it existed in his time, from which it appears that it was divided by a partition which separated the sexes, her establishment comprising both men and women. The tombs of Bishop Condlaed and Brigit were placed, highly decorated with pendent crowns of gold, silver, and gems, one on the right hand, and the other on the left of the high altar. The Irish bishops, it should be mentioned, wore crowns after the custom of the eastern church instead of mitres (Warren). After gathering her community she found she required the services of a bishop, and she accordingly chose (*elegit*) a holy man, a solitary, named Condlaed, 'to govern the church with her in episcopal dignity.' Condlaed was thus a monastic bishop under the orders of the head of the establishment as in the Columbian monasteries mentioned by Bæda (Todd, p. 13).

The death of Brigit took place at Kildare on 1 Feb. 523, which is her day in the calendar, and she was undoubtedly buried in Kildare, as already mentioned. On the other hand, a tradition current for many centuries has it that she was buried in Downpatrick with St. Patrick and St. Columba. This is now known to have been a fraud of John de Courcey, lord of Down, got up by him in the hope that the supposed possession of their bodies would conciliate the Irish to his rule (*Annals of Four Masters*). The Irish life in conclusion says that Brigit is 'the Mary of the Gael,' or, as it is in Broccan's hymn, 'she was one mother of the king's son,' which the gloss explains 'she was one of the mothers of Christ.' This strange manner of speaking which Irish ecclesiastics made use of, not only at home, but on the continent, to the astonishment of their hearers, is explained in a poem of Nicolas de Bibera (Schröder), by a reference to Matthew xii. 50: 'Whosoever shall do the will of my Father which is in heaven, the same is my brother and sister and mother.' Through the haze of miracles in which her acts are enveloped, we discern a courageous and warm-hearted personality which could not but impress itself on Irish imagination.

[Life of Brigit in Three Middle Irish Homilies, Whitley Stokes (Calcutta); Bollandi Acta SS. 1 Feb.; Todd's St. Patrick, Apostle of Ireland, pp. 10–26; Warren's Liturgy and Ritual of the Celtic Church; O'Reilly's Irish Dictionary, Supplement (voce 'Brigit'); Petrie's Essay on the Round Towers of Ireland; Giraldi Cambrensis Topog. Hib. chaps. 34–36; O'Donovan's Annals of the Four Masters at A.D. 1293, iii. 456; Lanigan's Eccl. Hist. vol. i.] T. O.

BRIGSTOCKE, THOMAS (1809–1881), portrait-painter, born at Carmarthen 17 April 1809, was third son of David Brigstocke, a tradesman of that town. At the age of sixteen he entered Sass's drawing-school, won two silver medals of the Society of Arts, studied at the Royal Academy, and was subsequently a pupil of H. P. Briggs, R.A., and J. P. Knight, R.A. He spent eight years in Paris and Italy, and made some copies from pictures by the old masters, among them one of Raphael's 'Transfiguration' in the Vatican, which, on the recommendation of W. Collins, R.A., was purchased for Christ Church, Albany Street, Regent's Park. In 1847 he went to Egypt, and painted the portrait of Mehemet Ali for the Oriental Club. Between 1843 and 1865 Brigstocke exhibited sixteen works at the Royal Academy, and two at the British Institution. His portrait of General Sir James Outram is now in the National Portrait Gallery; those of Sir James Outram and General Sir William Nott at the Oriental Club, Hanover Square; and that of Cardinal Wiseman at St. Cuthbert's College, Ushaw. He painted an historical picture entitled 'The Prayer for Victory.' He died suddenly on 11 March 1881, at 53 Welbeck Street, London, and was buried at Kensal Green.

BRIHTNOTH (*d.* 991), ealdorman of the East Saxons, married Æthelflæd, daughter of the ealdorman Ælfgar, and succeeded him in his office, probably about 953. As Brihtnoth's sister-in-law Æthelflæd was the wife of Æthelstan, ealdorman of the East Anglians, the friend of Dunstan, it is probable that he

was the uncle of Æthelstan's son, Æthelwine, the leader of the monastic party (GREEN, *Conquest of England*, 286, 352). He strongly upheld the cause of the monks, and made lavish grants to monastic foundations, especially to Ely and Ramsey. It is said that when he went to fight his last battle he asked Wulfsige, abbot of Ramsey, for food for his army. Wulfsige replied that the ealdorman and six or seven of his personal following could be maintained, but not the whole host. 'Tell the abbot,' Brihtnoth said, 'that as I cannot fight without my men, I will not eat without them,' and he turned and marched to Ely, where the abbot gladly entertained the whole army. In return he gave the house wide estates, and much gold and silver. The story is told with some considerable differences both in the Ely and the Ramsey history (GALE, iii. *Hist. Ram.* 432, *Eli.* 492). It has been wholly rejected by modern criticism (FREEMAN, *Norman Conquest*, i. 297, *n.* i). While some details in both versions are doubtless imaginary (the Ely history makes Brihtnoth ealdorman of the Northumbrians, and the Ramsey writer is regardless of geography), there seems no reason for refusing to believe that the tradition is based on fact. The Ely historian, who tells it of an earlier battle, which for lack of knowledge he also places at Maldon, may be near the truth. When in 991 a fleet of Norwegian ships under Justin and Guthmund, and possibly Olaf Tryggvason, plundered Ipswich, Brihtnoth, who was then an old man, went out to meet the invaders. He gave them battle near Maldon, on the banks of the Blackwater, then called the Panta. The fight is described in one of the very few old English poems of any length that have come down to us. In its present incomplete state this poem consists of 690 lines (THORPE'S *Analecta Anglo-Saxonica*, 131, in translation CONYBEARE'S *Illustrations of Anglo-Saxon Poetry*, xc., in rhythm in FREEMAN'S *Old English History*). Out of greatness of soul the ealdorman allowed a large number of the enemy to cross the water without opposition. A detailed description of the battle founded on the lay is to be found in Dr. Freeman's 'Norman Conquest' (i. 297–303). Brihtnoth was wounded early in the fight. He slew the man who wounded him and another, then he laughed and 'thanked God for the day's work that his Lord gave him.' After a while he was wounded again, and died commending his soul to God. The English were defeated; the personal following of the ealdorman fell fighting over his body. Brihtnoth's head was cut off and carried away by the enemy; his body was borne to Ely and buried by the abbot, who supplied the place of the head with a ball of wax. His widow Æthelflæd gave many gifts to Ely, and among them a tapestry in which she wrought the deeds of her husband.

BRIHTRIC. [See BEORHTRIC.]

BRIHTWALD (650?–731), the eighth archbishop of Canterbury, whose name is variously spelt by different writers, was of noble if not royal lineage (WILL. MALM. *Gest. Reg.* i. 29), and was born about the middle of the seventh century, but neither the place nor the exact date of his birth is known. It is doubtful whether he was educated at Glastonbury; but Bede says (v. 8) that, although not to be compared with his predecessor Theodore, he was thoroughly read in Scripture, and well instructed in ecclesiastical and monastic discipline. Somewhere about 670 the palace of the kings of Kent at Reculver was converted into a monastery, of which Brihtwald was made abbot. In a charter dated May 679 Alothari, king of Kent, bestows lands in Thanet upon him and his monastery (KEMBLE, *Cod. Dipl.* i. 16). Two years after the death of Theodore, Brihtwald was elected archbishop of Canterbury 1 July 692. Being probably unwilling to receive consecration at the hands of Wilfrith, archbishop of York, who had been opposed to Theodore [see WILFRITH], he crossed over to Gaul, and was consecrated by the primate Godwin, archbishop of Lyons, on 29 June 693 (BEDE, v. 8). Two letters of Pope Sergius are quoted by William of Malmesbury (*Gest. Pont.* ed. Hamilton, pp. 52–55), one addressed to the kings Æthelred, Aldfrith, and Ealdulph, exhorting them to receive Brihtwald as 'primate of all Britain,' the other to the English bishops, enjoining obedience to him as such; but the authenticity of these letters is doubtful (HADDAN and STUBBS, iii. 65). In 696 he attended the council of 'the great men' summoned by Wihtred, king of Kent, at Berghamstede or Bersted, in which laws were passed prescribing the penalties to be exacted for various offences, ecclesiastical and moral; and somewhere between 696 and 716 some ordinances, seemingly drawn up by him for securing the rights of the monasteries in Kent, were confirmed by the king in a council held at Beccanceld (probably Bapchild). The document is commonly known as the 'Privilege of Wihtred' (*ibid.* 233–240). In 702 he presided at the council of Estrefeld or Onestrefeld (near Ripon?), attended by Aldfrith [q. v.], king of Northum-

bria, in which Wilfrith was condemned and excommunicated; and in 705, Wilfrith having visited Rome and obtained a papal mandate for his restoration, Brihtwald held a council near the river Nidd, in which, chiefly through his skilful management, it was arranged that Wilfrith should be permitted to re-enter the Northumbrian kingdom, only resigning the see of York and becoming bishop of Hexham (*ibid.* 264). He had already in the previous year taken measures for the division of the diocese of Wessex, then vacant by the death of Hedda, bishop of Winchester, and in 705 he consecrated Daniel to be bishop of that see, and Aldhelm first bishop of the new see of Sherborne (Will. Malm. *Gest. Pont.* 376). An interesting letter of his has been preserved (*Ep. Boniface*, 155) to Forthere, the successor of Aldhelm, imploring him to induce Beorwald, abbot of Glastonbury, to release a slave girl for a ransom of three hundred shillings offered by her brother. About the same time he received Winfrith (Boniface) on a mission from the West-Saxon clergy, perhaps concerning the further subdivision of their diocese by the foundation of a see for Sussex at Selsey, which took place in 711. In 716, in a council at Clovesho, he obtained a confirmation of Wihtred's privilege (Haddan and Stubbs, iii. 300, 301). Scanty as these records of Brihtwald are, they seem to indicate that he ruled the church during a difficult period with energy and tact. The sympathies, however, of Bede and William of Malmesbury were so thoroughly on the side of Wilfrith of York that they were unable to bestow hearty praise on one who did not give him unqualified support. Brihtwald died in January 731, having presided over the church of England for thirty-seven years and a half, and was buried near his predecessor Theodore inside the church of St. Peter at Canterbury, the porch in which the first six primates had been buried being now quite full (Bede, ii. 3).

[Authorities cited in the text.] W. R. W. S.

BRIHTWOLD (*d.* 1045), the eighth bishop of Ramsbury, and the last before the removal of the see to Old Sarum, had been a monk at Glastonbury, and was made bishop in 1005. There are no records of his administration, although he presided over the see for forty years. William of Malmesbury (*Gest. Pont.* ii. § 83) relates a vision which Brihtwold had at Glastonbury in the reign of Canute, in which the succession of Æthelred's son Edward (the Confessor) to the throne was revealed to him. He was buried at Glastonbury, to which abbey, as also to that of Malmesbury, he had been a very liberal benefactor.

[Anglo-Saxon Chron.; Florence of Worcester; William of Malmesbury, Gest. Pontiff.] W. R. W. S.

BRIMLEY, GEORGE (1819–1857), essayist, was born at Cambridge on 29 Dec. 1819, and from the age of eleven to that of sixteen was educated at a school in Totteridge, Hertfordshire. In October 1838 he was entered at Trinity College, Cambridge, where in 1841 he was elected a scholar. He was reading with good hopes for classical honours, and was a private pupil of Dr. Vaughan; but even at that early age he was suffering from the disease to which he eventually succumbed. Although the state of his health prevented him from competing for university honours or obtaining a college fellowship, he was known to possess ability; and soon after taking his degree he was appointed college librarian (4 June 1845). He held this office until a few weeks before his death, when he returned to his father's house. Physical weakness prevented the sustained effort necessary for the production of any important work; but for the last six years of his life he contributed to the press. Most of his writings appeared in the 'Spectator' or in 'Fraser's Magazine,' the only one to which his name was attached being an essay on Tennyson's poems, contributed to the Cambridge Essays of 1855. He died 29 May 1857. A selection of his essays was made after his death and published with a prefatory memoir by the late W. G. Clark, then fellow and tutor of Trinity. This volume contains notices of a large number of the writers who were contemporary with Brimley himself, and is of considerable value as representing the contemporary judgment by a man of cultivation and acuteness on the writers of the middle of the nineteenth century, most of whom are now being judged by posterity. Sir Arthur Helps said of him, 'He was certainly, as it appeared to me, one of the finest critics of the present day.'

[W. G. Clark's Memoir attached to the Essays (London and Cambridge, 1858); information from the family.] E. S. S.

BRIND, RICHARD (*d.* 1718), organist, was educated as a chorister in St. Paul's Cathedral, probably under Jeremiah Clarke. On the death of the latter in 1707, Brind succeeded him as organist of the cathedral, a post he held until his death, which took place in March 1717–18. He was buried in the vaults of St. Paul's on 18 March. Administration of his effects was granted to his father, Richard Brind, on 7 April 1718. In the grant he is described as being a bachelor.

Brind seems to have been no very remarkable performer, and his sole claim to be remembered is that he was the master of Maurice Greene. His only recorded compositions are two thanksgiving anthems, which were scarcely known when Hawkins wrote his 'History of Music,' and have now entirely disappeared. It was during Brind's tenure of office at St. Paul's that Handel frequently took his place at the cathedral organ.

[Hawkins's History of Music (ed. 1853), ii. 767; Probate Register, Somerset House; Burial Register of St. Gregory by St. Paul; information from the Revs. E. Hoskins and W. Sparrow Simpson, and Mr. J. Challoner Smith.]

W. B. S.

BRINDLEY, JAMES (1716–1772), one of the earliest English engineers, was the son of a cottier, or small farmer, of Derbyshire. Dr. Smiles, from whose biographical notice much of the following account is taken, describes Brindley the elder as an idle, dissolute fellow, who neglected his children, and passed his time at bull-baiting and such-like amusements when he ought to have been at work. Like many other remarkable men, however, James Brindley had a wise and careful mother. At the age of seventeen he was apprenticed to one Abraham Bennett, a millwright, or as he would now be termed an engineer, of Sutton, near Macclesfield. Strangely enough, he seems for some time to have had the credit of being but a poor workman, so much so that his master even threatened to cancel his indentures and send him back to the field-work for which alone he was fitted. His talents were, however, called out by some special jobs of repairing machinery, and the occasion of the erection of a paper-mill with certain novel arrangements gave him an opportunity of exercising the mechanical skill he was not suspected of possessing, and led to his being placed in charge of his master's shop. On Bennett's death Brindley, whose apprenticeship had previously been completed, wound up the business and in 1742 moved from Macclesfield to Leek. Here he obtained before long a good business in repairing old machinery of all kinds and setting up new. The Wedgwoods, then small potters, employed him to construct flint-mills for grinding the calcined flint employed for glazing pottery, and, like all the engineers of his time, he tried his hand at the solution of the great problem of clearing mines from water, a problem not to be solved till the perfected steam-engine provided the power alone able to meet the difficulty. His attempts (patented in 1758) to improve Newcomen's steam-engine met with but small success, but he introduced numerous and important improvements in the various sorts of machinery he had to repair or to construct.

The great reputation of Brindley, however, was gained in civil, not in mechanical, engineering. Having been called in by the Duke of Bridgewater in 1759 to advise upon the project for forming a canal by which the produce of the Worsley coal-mines could be cheaply transported to Manchester, he produced a plan of striking originality, including the construction of an aqueduct by which the canal was to be carried over the river Irwell. This canal, suggested to the Duke of Bridgewater by the Grand Canal of Languedoc, was the first of any importance in England, and formed the commencement of the system of inland navigation in this country. Brindley's next work was the Bridgewater Canal connecting Manchester and Liverpool, and this was soon followed by numerous others, a full account of which will be found in Dr. Smiles's biography, as well as in other lives of Brindley to which reference is made below. In all he seems to have laid out, or superintended, the construction of over 365 miles of canals. The most important of these was the Trent and Mersey canal, known as the Grand Trunk. He remained to the last illiterate, hardly able to write and quite unable to spell. He did most of his work in his head, without written calculations or drawings, and when he had a puzzling bit of work he would go to bed and think it out. He had wonderful powers of observation, and a sort of intuitive perception which enabled him at once to grasp both the difficulties and the possibilities of an engineering project, before a survey was made or an estimate prepared.

[Smiles's Lives of the Engineers, 1861–2, vol. i.; J. Brindley and the Early Engineers, 1864; Memoir of Brindley by Samuel Hughes in Weale's Quarterly Papers on Engineering, 1844, i. 50; Kippis's Biog. Brit. art. 'Brindley.']

H. T. W.

BRINE, JOHN (1703–1765), baptist minister, was born at Kettering in 1703. Owing to the poverty of his parents he had scarcely any school education, and when a mere lad was set to work in the staple manufactory of his native town. Early in life he joined the baptists. While at Kettering he married a daughter of the Rev. John Moore, a baptist minister of Northampton, from whom he inherited Hutter's Hebrew Bible, which was to him at this time a treasure of no small value. The lady died in 1745. After some interval Brine married again.

Brine joined the baptist ministry at Kettering, and after preaching for some time received a call to Coventry. There he remained till about 1730, when he succeeded Mr. Morton as pastor of the baptist congregation at Curriers' Hall, Cripplegate. He was for a time one of the Wednesday evening lecturers in Great Eastcheap. He also preached in his turn at the 'Lord's Day Evening Lecture' in Devonshire Square. Brine resided for many years in Bridgewater Square, but during his last illness he took lodgings at Kingsland, where he died, on 24 Feb. 1765, in the sixty-third year of his age. He left positive orders that no funeral sermon should be preached for him. His intimate friend, Dr. Gill, however, preached a sermon upon the occasion to his own people, which was afterwards published, but contains no express reference to Brine. Brine was generally reputed a high Calvinist and a supralapsarian. He was called by many persons an antinomian, though his life was exemplary. He was buried in Bunhill Fields. His publications are numerous, and now scarce. In 1792 a pamphlet was published entitled 'The Moral Law the Rule of Moral Conduct to Believers, considered and enforced by arguments extracted from the judicious Mr. Brine's "Certain Efficacy of the Death of Christ."'

A complete catalogue of Brine's separate publications is given by Walter Wilson. The following are his chief works: 1. 'The Christian Religion not destitute of Arguments, &c. . . . in answer to "Christianity not founded on Argument,"' 1743. 2. 'The Certain Efficacy of the Death of Christ asserted' (a book at one time greatly in demand), 1743. 3. 'A Vindication of Natural and Revealed Religion, in answer to Mr. James Foster,' 1746. 4. 'A Treatise on various subjects: controversial tracts against Bragge, Johnson, Tindal, Jackson, Eltringham, and others' (in 2 vols.), 1750, 1756, 1766, which was extremely popular. It was edited by James Upton in 1813, with some of Brine's sermons added, and a life of the author prefixed (from Walter Wilson). 5. 'Discourses at a Monthly Exercise of Prayer, at Wednesday and Lord's Day Evening Lectures, and Miscellaneous Discourses' (2 vols.); and 6. 'Funeral and Ordination Sermons and Choice Experience of Mrs. Anne Brine, with Dr. Gill's Sermon at her Funeral,' 1750. Collected together, his pamphlets fill eight volumes octavo.

[Wilson's Dissenting Churches, ii. 574; Gill's Sermons and Tracts; John Brown's Descriptive List of Religious Books; Jones's Bunhill Memorials; Catalogue of the late Mr. Thomas Jepps, of Paternoster Row, 1866; Brit. Mus. Cat.]

J. H. T.

BRINKELOW, HENRY (*d.* 1546), satirist, son of Robert Brinkelow, a farmer of Kintbury, Berkshire, began life as a Franciscan, or Grey Friar, but left the order, married, and became a citizen and mercer of London. He adopted the opinions of the reforming party, and wrote satires on social and religious subjects under the pseudonym of Roderigo Mors. He says that he was banished from England through the influence of the bishops. By his will, dated 1546, the year of his death, and proved by his widow Margery, he left 5*l.* 'to the godly learned men who labour in the vineyard of the Lord, and fight against Anti-Christ.' This will shows that he was a man of substance. He left a son named John. His works are: 1. 'The Complaynt of Roderyck Mors, sometyme a gray fryre, unto the parlament house of Ingland his natural cuntry. Mighell boys, Geneve in Savoye' (1545?); another edition, 'M. boys, Geneve' (1550); a third 'Per Franciscum de Turona' (Turin). These are in the library of the British Museum. Another edition with slight variations is in the Guildhall Library, London. The 'Complaynt' has been published by the Early English Text Society under the editorship of Mr. J. Meadows Cowper, 1874. It deals with wrongs done the people by enclosures, with the advance in rents, and with legal oppression; it recommends the confiscation of the property of bishops and deans, of chantries and the like, and, after allowing one-tenth to the crown, points out various social objects to which the remainder should be devoted. The 23rd chapter, headed 'A lamentacyon for that the body and tayle of the pope is not banished with his name,' was reprinted in 1641 as a separate broadside with the title 'The true Coppy of the Complaint of Roderyck Mors . . . unto the Parliament House of England.' 2. 'The Lamentacion of a Christian against the Citie of London made by Roderigo Mors . . . Prynted at Jericho in the land of Promes by Thome Trauth' (1542); another edition, 'Nurembergh, 1545;' another, in the Lambeth Library (no place), 1548; also edited for the Early English Text Society by Mr. J. M. Cowper, along with the 'Complaynt.' Besides these, Mr. Cowper attributes to Brinkelow: 3. 'A Supplycacion to our moste Soueraigne Lord Kynge Henry the Eyght,' 1544; and 4. 'A Supplycation of the Poore Commons;' large extracts from the 'Supplication of the Commons' are given in Strype's 'Memorials,' vol. i. Both these have been edited by Mr. Cowper for the Early English Text Society (1871) in one volume, with Fish's 'Supplication for the Beggars' edited

by Mr. Furnivall. Bale, who attributes the 'Complaynt' and the 'Lamentacion,' but not the two 'Supplications,' to Brinkelow, says that he also wrote an 'Expostulation addressed to the Clergy,' which now appears to be lost.

[All that is known of Brinkelow will be found in J. M. Cowper's edition of the Complaynt of Roderick Mors, Early English Text Soc. No. 22, extra series, to which, and to the same editor's work in the volume entitled A Supplication to the Beggars, No. 13, extra series, this article is largely indebted; Bale's Script. Brit. Cat. ii. 105; Strype's Ecclesiastical Memorials, i. i. 608.] W. H.

BRINKLEY, JOHN, D.D. (1763–1835), bishop of Cloyne and first astronomer royal for Ireland, was born at Woodbridge in Suffolk, and owed to the influence and aid of Mr. Tilney of Harleston, under whose care he was educated, the means of supporting himself at Cambridge. He graduated at Caius College as senior wrangler and first Smith's prizeman in 1788, became a fellow of his college, proceeded M.A. in 1791, and D.D. in 1806. He contributed to the 'Ladies' Diary' from 1780 or 1781 to 1785, and acted as assistant at Greenwich while preparing for his degree. To Maskelyne's recommendation he owed his appointment, in 1792, as Andrews professor of astronomy in the university of Dublin, with the title, added on the death of Ussher, of 'Astronomer Royal for Ireland,' and the direction of the college observatory at Dunsink, near Dublin. Its sole equipment consisting at that time of a transit instrument, he had leisure to improve his knowledge of the higher mathematics, in which, as well as in acquaintance with the works of foreign analysts, he far excelled most of his contemporaries. The fruits of his inquiries were imparted to the Royal Irish Academy in a series of communications from 1797 to 1817, and to the Royal Society in 1807 in a paper entitled 'An Investigation of the General Term of an Important Series in the Inverse Method of Finite Differences' (*Phil. Trans.* xcvii. 114), of which the object was to surmount a difficulty remaining after Lagrange's investigation in the 'Berlin Memoirs' for 1772.

In the middle of 1808 a splendid altitude and azimuth circle, eight feet in diameter, ordered from Ramsden in 1788, and, after many delays, completed by his successor Berge, was set up at Dunsink, and Brinkley lost no time in turning it vigorously to account for the purposes of practical astronomy. His supposed discovery of an annual (double) parallax for *a* Lyræ of 2″·52 was laid before the Royal Society in 1810 (*Phil. Trans.* c. 204), and he announced in 1814 (*Trans. R. Irish Ac.* xii. 33) similar and even larger results for several other stars. Their validity was disputed by Pond, and careful observations, made with a view to test it during several years, proved at Greenwich consistently adverse, at Dublin strongly confirmatory (*Phil. Trans.* cviii. 275, cxi. 327). In 1822 Brinkley described before the Royal Irish Academy a delicate instrumental investigation of solar nutation, heretofore known in theory only. If, he urged, his instrument were competent to exhibit the minute variations in the places of the stars produced by this cause, *à fortiori* it could be depended upon for the larger amounts ascribed to parallax (*Trans. R. Irish Ac.* xiv. 3, 1825). The argument seemed at the time unanswerable, and was fortified by his seemingly successful disengagement from the Greenwich observations themselves of a parallax for *a* Lyræ not differing sensibly from that inferred at Dublin (*Mem. R. A. Soc.* i. 329). The controversy, which was conducted on both sides with moderation and candour, terminated in 1824 with Brinkley's reassertion of his conclusion of fourteen years previously. Yet he was undoubtedly mistaken, although the source of his mistake remains obscure. The inquiry, however, was eminently useful in bringing about a closer scrutiny of instrumental defects and uranographical corrections, and so clearing the ground for further research. Brinkley's communications on the subject were honoured in 1824 by the Royal Society (of which body he had been elected a fellow in 1803) with the Copley medal. He presided over the Royal Irish Academy from 1822 until his death, and acted as vice-president of the Astronomical Society 1825–7, and as its president for the biennial period 1831–3.

In 1814 he published a new theory of astronomical refractions deduced from his own observations, with tables to facilitate their calculation (*Trans. R. I. Ac.* xii. 77); the same volume contains his catalogue of forty-seven fundamental stars. Fresh determinations by him of the obliquity of the ecliptic and of the precession of the equinoxes appeared respectively in 1819 and 1828 (*Phil. Trans.* cix. 241; *Trans. R. I. Ac.* xv. 39); and his constants of aberration and lunar nutation were adopted by Baily in the Astronomical Society's Catalogue, the former deduced from 2,633, the latter from 1,618 comparisons of various stars. He observed the great comet of 1819, and computed elements for it, and for the comet observed by Captain Hall at Valparaiso in 1821 (*Quart. Jour. of Science*, ix. 164; *Phil. Trans.* cxii. 50).

His merits were recognised by ecclesiastical promotion. In 1806 he was collated to the prebend of Kilgoghlin and to the rectory of Derrybrusk; in 1808 he became archdeacon of Clogher, and on 28 Sept. 1826 bishop of Cloyne. The satisfaction of George IV with his reception at Trinity College, Dublin, is said to have been not unconnected with his final elevation. Thenceforth his episcopal duties engrossed all his attention, and the scientific activity, by which he had raised the little observatory at Dunsink to a position of first-rate importance, was brought to a close. After some years of failing health he died at his brother's house in Leeson Street, Dublin, on 14 Sept. 1835, aged 72, and was buried in the chapel of Trinity College. A marble tablet erected to his memory in the cathedral of his diocese understates his age by three years. In character he was benevolent and disinterested.

He wrote (besides thirty-five contributions to learned collections, many of them separately reprinted) 'Elements of Astronomy,' still used as a text-book in Dublin University. The work originated in his lectures to undergraduates, 1799–1808, which, at the request of the board, were published in the latter year, and again, with three additional chapters and an appendix, in 1813. Since then it has run through numerous editions, and obtained in 1871 renewed vitality in a careful recast by Drs. Stubbs and Brünnow. Brinkley's essay on the 'Mean Motion of the Lunar Perigee,' read before the Royal Irish Academy on 21 April 1817, obtained the Conyngham medal. He was one of the first to encourage the rising genius of Sir William Hamilton, his successor in the Andrews chair of astronomy, and several of his letters are printed in the 'Life of Hamilton' by Graves (1882), i. 239-40, 297, 324. He was a botanist as well as an astronomer.

BRINKNELL or **BRYNKNELL, THOMAS** (*d.* 1539?), professor at Oxford, was educated at Lincoln College, and was appointed head-master of the school attached to Magdalen College, where he 'exercised an admirable way of teaching.' He afterwards studied for a time at University College, and became intimate with Wolsey. He proceeded B.D. in 1501, and D.D. on 13 March 1507-8, 'at which time,' says Wood, 'the professor of div. or commissary did highly commend him for his learning.' On 7 Jan. 1510–11 he was collated to a prebend in Lincoln Cathedral, and on the same date was made master of the hospital of St. John at Banbury. In 1521 he was nominated professor of divinity on Cardinal Wolsey's new foundation. He apparently died in 1539 (Le Neve, *Fasti*, ii. 183). He was the author of a treatise against Luther, which does not seem to have been printed. According to Wood it was 'a learned piece,' and 'commended for a good book.' Wolsey recommended Brinknell to Henry VIII as 'one of those most fit persons in the university to encounter Mart. Luther.'

[Wood's Athenæ Oxon. (Bliss), i. 29; Fasti (Bliss), i. 6, 22; Oxf. Univ. Reg. (Boase), 55; Tanner's Bibl. Brit. 126; Bloxam's Magdalen College, iii. 70.] S. L.

BRINSLEY, JOHN (*fl.* 1633), the elder, puritan divine and educational writer, was educated at Christ's College, Cambridge, where he graduated B.A. in 1584 and M.A. in 1588. He became a 'minister of the Word,' and had the care of the public school at Ashby-de-la-Zouch in Leicestershire. The famous astrologer, William Lilly, was one of his pupils, as he himself informs us in his curious autobiography. 'Upon Trinity Sunday 1613,' he says, 'my father had me to Ashby-de-la-Zouch to be instructed by one Mr. John Brinsley; one in those times of great abilities for instruction of youth in the Latin and Greek tongues; he was very severe in his life and conversation, and did breed up many scholars for the universities. In religion he was a strict puritan, not conformable wholly to the ceremonies of the church of England' (*Hist. of his Life and Times* (1774), 5). Again he says: 'In the eighteenth year of my age [i.e. in 1619 or 1620] my master Brinsley was enforced from keeping school, being persecuted by the bishop's officers; he came to London, and then lectured in London, where he afterwards died' (*ib.* 8). He married a sister of Dr. Joseph Hall, bishop of Norwich. His works are: 1. 'Ludus Literarius: or, the Grammar Schoole; shewing how to proceede from the first entrance into learning to the highest perfection required in the Grammar Schooles,' London, 1612 and 1627, 4to. 2. 'The true Watch and Rule of Life,' 7th ed. 2 parts, London, 1615, 8vo, 8th ed. 1619; third part out of Ezekiel ix., London, 1622, 4to; fourth part, 'to the plain-hearted seduced by popery,' London, 1624, 8vo. 3. 'Pueriles Confabulatiunculæ: or Childrens Dialogues, little conferences, or talkings together, or Dialogues fit for children,' London, 1617. 4. 'Cato (concerning the precepts of common life) translated gram-

matically,' London, 1622, 8vo. 5. 'A Consolation for our Grammar Schooles; or a faithfull incouragement for laying of a sure foundation of all good learninge in our Schooles,' London, 1622, 4to. 6. 'The Posing of the Parts: or, a most plaine and easie way of examining the accidence and grammar by questions and answers,' London, 1630, 4to; 10th ed. London, 1647, 4to. 7. 'The first Booke of Tullies Offices, translated grammatically: and also according to the propriety of our English tongue,' London, 1631, 8vo. 8. 'Stanbrigii Embrion relimatum, seu Vocabularium metricum olim à Johanne Stanbrigio digestum, nunc verò locupletatum, defæcatum, legitimo nec non rotundo plerumque carmine exultans, & in majorem Pueritiæ balbutientis usum undequaque accommodatum,' London, 1647, 4to. 9. 'Corderius Dialogues, translated grammatically,' London, 1653. In the dedication to William, lord Cavendish, he speaks of his lordship's 'favourable approbation of my School-endeavours, together with your honourable bountie, for the incouraging of me, to the accomplishment of my promise for my Grammaticall translations.' 10. 'Virgil's Eclogues, with his book of the Ordering of Bees, translated grammatically,' 1663, 4to.

[MS. Addit. 5863 f. 65, 19165 f. 240; Notes and Queries (2nd series). xii. 126, 180 (4th series), iv. 411; Lowndes's Bibl. Manual (Bohn); Brit. Mus. Cat.; Cat. Lib. Impress. Bibl. Bodl. (1843), i. 331.] T. C.

BRINSLEY, JOHN (1600–1665), the younger, puritan divine, was born at Ashby-de-la-Zouch, Leicestershire, in 1600, being son of John Brinsley the elder [q. v.], master of the public school there, and his wife, who was a sister of Dr. Joseph Hall, afterwards bishop of Norwich. Having received the rudiments of education from his father, he was admitted of Emmanuel College, Cambridge, at the age of thirteen years and a half. He attended his uncle, Dr. Hall, then dean of Worcester, to the synod of Dort (1618–19), as his amanuensis; and on his return to Cambridge he was elected to a scholarship in his college, and took his degrees (B.A. 1619, M.A. 1623). After being ordained he preached first at Preston, near Chelmsford. In 1625 he was appointed by the corporation of Great Yarmouth their minister; but the dean and chapter of Norwich, claiming the right of nomination, disputed the appointment, and he was summoned before the high court of commission at Lambeth, and was at midsummer 1627 dismissed from his ministerial function in Yarmouth church, by a decree in chancery, given upon a certificate made by Archbishop Laud. He continued, however, to preach in the town, in what was then the Dutch church, was subsequently the theatre, and is now commonly called the town house. The corporation meanwhile persevered in their struggle with the bishop and the court in his behalf, till in 1632 the king in council forbade his officiating at Yarmouth altogether, and even committed to prison four individuals—among them the well-known regicide, Miles Corbet, then recorder of the town—for abetting him. Brinsley after this exercised his pastoral duties in the half hundred of Lothingland in 1642, and, through the interest of Sir John Wentworth of Somerleyton Hall, was appointed to the cure of the parish of Somerleyton. Two years subsequently he was again chosen one of the town preachers at Yarmouth, and it is said that he occupied the chancel of the church with the presbyterians, while Bridge with the congregationalists was in possession of the north aisle, and the south aisle, with the nave, was left to the regular minister. Service in all these was performed simultaneously, the corporation having divided the building for the purpose on the death of the king, at an expense of 900*l*.

At the Restoration he was ejected for refusing the terms of conformity. He was inflexible on the points which divided so many clergymen from the established church, and it is stated that he refused considerable preferment which was offered to induce him to remain in her communion. His death occurred on 22 Jan. 1664–5, and he was buried in St. Nicholas's Church, Yarmouth, with several others of the family. He had a son Robert who was educated at Emmanuel College, Cambridge (M.A. 1660), but was ejected from the university, and studied medicine at Leyden, where he took the degree of M.D. He afterwards practised his profession at Yarmouth, where he was elected co-chamberlain with Robert Bernard in 1681, and in 1692 was appointed water bailiff.

Brinsley published many treatises and sermons, including: 1. 'The Healing of Israels breaches,' London, 1642, 4to. 2. 'Church Reformation tenderly handled in four sermons,' London, 1643, 4to. 3. 'The doctrine and practice of Pædo-baptisme asserted and vindicated,' London, 1645, 4to. 4. 'Stand Still; or, a Bridle for the Times,' London, 1647 and 1652, 4to. 5. 'Two Treatises: the One handling the Doctrine of Christ's Mediatorship. The other of Mystical Implantation,' 2 parts, London, 1651–2, 8vo. 6. 'The Mystical Brasen Serpent, with the Magnetical Vertue thereof; or, Christ exalted

upon the Cross,' 2 parts, London, 1653, 8vo. 7. 'Two Treatises: I. The Saints Communion with Jesus Christ. II. Acquaintance with God,' London, 1654, 12mo. 8. 'Two Treatises: I. A Groan for Israel; or, the Churches Salvation (temporall, spirituall), the desire and joy of Saints; II. Περιφέρεια. The Spirituall Vertigo, or Turning Sickness of Soul-Unsettlednesse in matters of Religious Concernment,' 2 parts, London, 1655, 8vo. 9. 'Gospel Marrow, the great God giving himself for the sons of men; or, the Sacred Mystery of Redemption by Jesus Christ, with two of the ends thereof, justification and sanctification, doctrinally opened, and practically applied,' 2 parts, London, 1659, 8vo.

BRINTON or **BRUNTON, THOMAS** (*d.* 1389), bishop of Rochester, was a monk of the Benedictine house at Norwich. He is said to have studied both at Oxford and Cambridge, and is variously described as bachelor of theology and as 'doctor decretorum' of the former university. Having taken up his residence in Rome, he was made penitentiary of the holy see, and on 31 Jan. 1372–3 was appointed bishop of Rochester by Gregory XI, in the room of John Hertley, prior of Rochester, whose election was set aside by the pope. Brinton appears to have been distinguished as a preacher, and a sermon of his, delivered to the people of London on the occasion of the coronation of Richard II, is reported by Walsingham (*Historia Anglicana*, i. 338, 339, ed. Riley, who wrongly attributes the discourse to Brinton's predecessor, Thomas Trillek, ii. 513 *b*). Subsequently he was made confessor to the king. He was present at the council of Blackfriars in May–July 1382, which condemned the doctrines of Wycliffe (*Fasciculi Zizaniorum*, pp. 286, 287, 498), and assented to that condemnation (*ib.* pp. 290, 291). He died in 1389 (his will is dated 30 Aug.), and was buried in the parish church of Seale in Kent. Weever (*Ancient Funerall Monuments*, p. 325) describes the bishop's tomb, from which the name had already (1631) disappeared. On the authority of Bale (*Script. Brit. Cat.* xii. 12), who however confessed himself ignorant even of the century in which Brinton lived, the bibliographers attribute to him a collection of 'Sermones coram Pontifice' and 'Sermones alii solennes.'

[Godwin, De Præsulibus (1743), p. 533; Tanner's Bibl. Brit. p. 126; Le Neve's Fasti, ii. 564, ed. Hardy. Of the alternative forms of the name given by Tanner, Briton looks like an error, and Brampton may easily have arisen from careless transcription of the form Brunton given by Walsingham (l.c., ii. 180).] R. L. P.

BRINTON, WILLIAM, M.D. (1823–1867), physician, was born at Kidderminster, where his father was a carpet manufacturer, 20 Nov. 1823. After education at private schools and as apprentice to a Kidderminster surgeon he matriculated at the London University in 1843, and began medical studies at King's College, London. He won several prizes, and graduated M.B. in the London University in 1847, M.D. in 1848. In 1849 he became a member of the College of Physicians, and in 1854 a fellow. In 1848 he sent to the Royal Society a paper, 'Contributions to the Physiology of the Alimentary Canal,' and after holding some minor appointments at his own medical school he was elected lecturer on forensic medicine at St. Thomas's Hospital. He published an able series of 'clinical remarks' in the 'Lancet,' and the reputation which these brought him led to his early acquisition of a considerable practice. He became physician to St. Thomas's Hospital, and in addition to his other lectureship was made lecturer on physiology there. He married in 1854 and lived in Brook Street, Grosvenor Square, and his practice steadily increased. Intestinal obstruction and diseases of the alimentary canal in general were subjects to which he had paid special attention, and on which he was often consulted. His Croonian lectures at the College of Physicians in 1859 were on intestinal obstruction. In 1857 he published the 'Pathology, Symptoms, and Treatment of Ulcer of the Stomach,' the first complete treatise on that subject which had appeared in England, and in 1859 he brought out 'Lectures on the Diseases of the Stomach,' of which a second edition was published in 1864. This book contains a clear account of the existing knowledge of the subject, with many well-arranged notes of cases and a few observations new to medicine, for example the description (p. 87, ed. 1864) of the condition of stomach sometimes discovered after death in cases of

scarlet fever. In the last chapter Brinton demonstrates the absence of pathological ground for the affection so often named in general literature, as well as in medical books, under the term gout in the stomach. Brinton was a man of untiring industry, and published many papers in the medical periodicals of his time. He translated Valentin's 'Text Book of Physiology' from the German in 1853; wrote a short treatise 'On the Medical Selection of Lives for Assurance' in 1856, and in 1861 'On Food and its Digestion, being an Introduction to Dietetics,' besides six articles in 'Todd's Cyclopædia of Anatomy and Physiology,' and some papers read before the Royal Society. He was elected F.R.S. in 1864. His vacations were often spent in the Tyrol, where he was an active member of the Alpine Club. Two papers by him appear in 'Peaks, Passes, and Glaciers' (series ii. vol. i.) In 1863 Brinton had symptoms of renal disease, and, after manly struggles to continue his labours in spite of the malady, he died on 17 Jan. 1867. After his death a treatise on 'Intestinal Obstruction,' based on his Croonian lectures, was edited by his friend Dr. Buzzard. Brinton was a physician of high personal character and great powers of work. His book on ulcer of the stomach deserves a place among the best English medical monographs, and in all his books the assertions rest on a solid basis of observation. He left six children, and one of his sons graduated in medicine at Cambridge. A memoir of Brinton by Dr. Thomas Buzzard appeared in the 'Lancet' for 26 Jan. 1867, and has been reprinted.

[Buzzard's Memoir (1867); Brinton's works.]

N. M.

BRIOT, NICHOLAS (1579–1646), medallist and coin-engraver, was born in 1579, at Damblein in Bassigny, duchy of Bar. From 1605 to 1625 he held the appointment of engraver-general of the coins of France, and having become acquainted in Germany with the improved mechanical processes for the production of coins, especially with the 'balance' (balancier), he determined to introduce them with further improvements of his own into his native country. From 1616 till 1625 he continued to persevere in his endeavour to get his processes officially adopted. In 1615 he had written a treatise entitled 'Raisons, moyens, et propositions pour faire toutes les monnaies du royaume, à l'avenir, uniformes, et faire cesser toutes fabrications, &c.' His proposals, however, encountered the greatest opposition, especially from the 'Cour des monnaies,' the members of which resisted the introduction of machinery, and upheld their own less rapid and more clumsy method of striking coins with the hammer. The pattern-pieces made by Briot for the French coinage are very rare, particularly the franc and demi-franc of 1616 and 1617, with the legend 'Espreuve faicte par l'exprès commandement du roy Louis XIII.' Finding that his long-continued efforts were fruitless, and pressed hard by his creditors, Briot fled to England in 1625, and offered his services and improved machinery to Charles I, by whom he was well received. On 16 Dec. 1628, the king granted him 'the privileg to be a free denizen, and also full power and authority to frame and engrave the first designs and effigies of the king's image in suc size and forms as are to serve in all sorts of coins of gold and silver' (Rymer, *Fœdera*, xix. 40). In January 1633 he was appointed chief engraver to the English mint, and in 1635 master of the Scottish mint. For the English coinage Briot made the crown, half-crown, and other denominations; his specimens, which are very neatly executed and well formed, being signed with the letter B, or with B and a small flower or an anchor. He also executed various pattern-pieces for the coinage, and made during the earlier part of the reign of Charles I a considerable number of dies and moulds for medals, the most important of which were for the coronation medal of Charles (1626), the 'Dominion of the Sea' medal (1630), and the Scottish coronation medal (1633). His medals bear the signature 'N. B.,' 'Briot,' or 'N. Briot.' After the outbreak of the civil war very little is known of Briot's life; but the common statement that he returned to France and died there about 1650 is certainly incorrect, as an official document of the time of Charles II (*Calendar of State Papers*, Domestic, May 1662, p. 394) proves that he died in England in the year 1646. From 1642 till the time of his death he seems to have remained in the service of the English king, and to have followed him in his capacity of engraver to York and to Oxford. At the Restoration, the name of his widow, Esther Briot, was one of those which were ordered to be placed on the list for relieving the servants of Charles I, the sum of 3,000*l.* having been due to her husband at the time of his death.

BRISBANE, Sir CHARLES (1769?–1829), rear-admiral, fourth son of Admiral John Brisbane, who died 1807, was in 1779 entered on board the Alcide, commanded by his father, was present at the defeat of the Spanish fleet off Cape St. Vincent, and the relief of Gibraltar in January 1780, and afterwards in the West Indies. In the end of 1781 he was placed on board the Hercules with Captain Savage, and was present in the action of Dominica, 12 April 1782, where he was badly wounded by a splinter. He continued serving during the peace, and after the Spanish armament in 1790 was promoted to the rank of lieutenant 22 Nov. In 1793 he was in the Meleager frigate, in which he went out to the Mediterranean, and was actively employed on shore at Toulon, and afterwards in Corsica, both at San Fiorenzo and at the siege of Bastia, under the immediate orders of Captain Horatio Nelson, and like him sustained the loss of an eye from a severe wound in the head inflicted by the small fragments of an iron shot. He afterwards served for a short time in the Britannia, bearing the flag of Lord Hood, by whom he was specially promoted to the command of the Tarleton sloop 1 July 1794, and served in her during the remainder of that and the following year in the squadron acting in the Gulf of Genoa, under the immediate orders of Nelson (*Nelson Despatches*, ii. 59 *n*, 105). In the autumn of 1795 he was sent from Gibraltar to convoy two troopships to Barbadoes. On his way thither he fell in with a Dutch squadron, which he kept company with, sending the transports on by themselves, till, finding that the Dutch were bound to the Cape of Good Hope, he made all haste to carry the intelligence to Sir George Elphinstone, the commander-in-chief on that station. His acting in this way, on his own responsibility, contrary to the orders under which he had sailed, had the good fortune to be approved of; and after the capture of the Dutch ships in Saldanha Bay, 18 Aug. 1796, he was promoted by Sir George to the command of one of them; but he had previously, 22 July, been promoted by Sir John Jervis, the commander-in-chief in the Mediterranean, under whose orders he had sailed, and he also received the thanks of the admiralty. He continued on the Cape station in command of the Oiseau frigate, and was in her at St. Helena when a dangerous mutiny broke out on board. This was happily quelled by his firm and decisive measures, and he was shortly afterwards recalled to the Cape to take command of the Tremendous, Rear-admiral Pringle's flagship, on board which also the mutinous spirit had threatened extreme danger. In the course of 1798 he returned to England with Pringle in the Crescent frigate, and in 1801 was appointed to the Doris frigate, one of the squadron off Brest, under Admiral Cornwallis. During the short peace he commanded the Trent frigate and the Sanspareil in the West Indies. He was afterwards moved into the Goliath, in which on his way home he was nearly lost in a hurricane. In 1805 Brisbane was appointed to the Arethusa frigate, which he took to the West Indies. Early in 1806 he had the misfortune to run the ship ashore amongst the Colorados rocks, near the north-west end of Cuba, and she was got off only by throwing all her guns overboard. In this defenceless condition she fell in with a Spanish line-of-battle ship off Havana; but fortunately the Spaniard, ignorant of the Arethusa's weakness, did not consider himself a match for even a 38-gun frigate, and ran in under the guns of the Moro Castle. Having refitted at Jamaica, the Arethusa was in August again off Havana, and on the 23rd, in company with the Anson of 44 guns, captured the Spanish frigate Pomona, anchored within pistol-shot of a battery mounting eleven 36-pounders, and supported by ten gunboats. The gunboats were all destroyed and the battery blown up, apparently by some accident to the furnaces for heating shot, by which the Arethusa had been set on fire, but without any serious consequences (James, *Naval History* (1860), iv. 169), though she had two men killed, and thirty-two, including Captain Brisbane, wounded. On 1 Jan. 1807 Brisbane, still in the Arethusa, with three other frigates, having been sent off Curaçao, reduced all the forts and captured the island without serious difficulty or loss. The fortifications, both by position and armament, were exceedingly strong, but the Dutch were unprepared for a vigorous assault, and were, it was surmised, still sleeping off the effects of a new year's eve carousal, when, at earliest dawn, the English squadron sailed into the harbour. For his success on this occasion Brisbane was knighted, and he, as well as the other three captains, received a gold medal (*ibid.* iv. 275). He continued in command of the Arethusa till near the end of 1808, when he was transferred to the Blake, of 74 guns, but was almost immediately afterwards appointed governor of the island of St. Vincent, which office he held, without any further service at sea, till his death in December 1829. On 2 Jan. 1815 he had been nominated a K.C.B., and attained his flag

rank on 12 Aug. 1819. He married Sarah, daughter of Sir James Patey, knight, of Reading, and left several children.

[Ralfe's Nav. Biog. iv. 84; Marshall's Roy. Nav. Biog. ii. (vol. i. pt. ii.) 730; Gent. Mag. (1830), c. i. 642.] J. K. L.

BRISBANE, Sir JAMES (1774–1826), commodore, fifth son of Admiral John Brisbane, and brother of Rear-admiral Sir Charles Brisbane [q. v.], entered the navy in 1787 on board the Culloden. After serving in various ships he was transferred to the Queen Charlotte, bearing the flag of Lord Howe, to whom he acted as signal-midshipman in the battle of 1 June. He was made lieutenant on 23 Sept. 1794, and served at the reduction of the Cape of Good Hope. He was afterwards moved into the Monarch, Sir George Elphinstone's flagship, and was present in her at the capture of the Dutch squadron in Saldanha Bay 18 Aug. 1796. Sir George promoted Brisbane into one of the prizes, and soon afterwards moved him into the Daphne frigate, in command of which he returned to England. The promotion, however, was not confirmed till 27 May 1797. In 1801 Brisbane was appointed to the command of the Cruiser sloop, attached to the Baltic fleet under Sir Hyde Parker. He was more particularly attached to the division under Lord Nelson, and on the nights of 30 and 31 March had especial charge of the work of sounding and buoying the channels approaching Copenhagen (*Nelson Despatches*, iv. 302–303). In acknowledgment of his services on this occasion he was promoted to post rank on 2 April 1801, and in the latter part of the year commanded the Saturn as flag-captain to Rear-admiral Totty until the admiral's death, when the ship was paid off. From 1803–5 he had command of the sea fencibles of Kent, and in 1807 of the Alcmene frigate on the coast of Ireland and in the Channel. In 1808 he was appointed to the Belle Poule, a 38-gun frigate, and was ordered by Lord Collingwood to take command of the squadron blockading Corfu. Whilst so employed he captured on 15 Feb. 1809 the French frigate Var, which had endeavoured to break the blockade. He was afterwards engaged in the reduction of the Ionian islands and the establishment of the septinsular republic. He continued in the Adriatic till the summer of 1811, during which time he captured or destroyed several of the enemy's small cruisers, and was repeatedly engaged with their batteries on different parts of the coast. In September 1812 Brisbane was appointed to the Pembroke in the Channel fleet, and the following summer was again sent to the Mediterranean, where he was actively employed. In 1815 he again served in the Mediterranean, and in 1816 in the expedition against Algiers. After the bombardment on 27 Aug. he was sent home with despatches, and on 2 Oct. received the honour of knighthood. He had already been made a C.B. in June 1815. In 1825 he was appointed commander-in-chief in the East Indies, where he arrived in time to direct the concluding operations of the first Burmese war, for his services in which he was officially thanked by the governor-general in council. His health, however, had suffered severely, and was never re-established. He lingered for some months, and died at Penang on 19 Dec. 1826. He married in 1800 the only daughter of Mr. John Ventham, by whom he had one son and two daughters.

[Marshall's Roy. Nav. Biog. iii. (vol. ii.) 400; James's Naval History (1860), vi. 337.] J. K. L.

BRISBANE, JOHN (*d.* 1776?), physician, a native of Scotland, graduated M.D. at Edinburgh in 1750, and was admitted licentiate of the College of Physicians in 1766. He held the post of physician to the Middlesex Hospital from 1758 till 1773, when he was superseded for being absent without leave. His name disappears from the college list in 1776. He was the author of 'Select Cases in the Practice of Medicine,' 8vo, 1762, and 'Anatomy of Painting, with an Introduction giving a short View of Picturesque Anatomy,' fol. 1769. This work contains the six Tables of Albinus, the Anatomy of Celsus, with notes, and the Physiology of Cicero.

[Munk's Coll. of Phys. ii. 274; Lowndes's Bibl. Manual (Bohn), i. 272.]

BRISBANE, Sir THOMAS MAKDOUGALL (1773–1860), general, colonial governor, and astronomer, was the eldest son of Thomas Brisbane of that ilk, and was born at Brisbane House, Largs in Ayrshire, on 23 July 1773. His father had served at Culloden, and died in 1812, aged 92. His mother was Eleanor, daughter of Sir W. Bruce of Stenhouse. After spending some time at Edinburgh University, where he showed his taste for mathematics and astronomy, he was sent to an academy in Kensington, was gazetted an ensign in the 38th regiment in 1789, and joined it in Ireland in 1790, where he struck up an acquaintance with Arthur Wellesley, then aide-de-camp to the lord-lieutenant, which lasted all their lives. He was promoted lieutenant in 1792, and captain, at the age of twenty, in 1793, into the 53rd regiment, with which he served through the campaign of 1793–5 in Flanders under the Duke of York. He was wounded in the attack

on the camp of Famars, on 18 May 1793, and yet was present at the capture of Valenciennes, the battles before Dunkirk, at Nieuwpoort, and Nimeguen, and was often engaged in the disastrous winter retreat to Bremen. He was promoted major in the 53rd on 5 Aug. 1795, and in October of the same year accompanied his regiment to the West Indies in Sir Ralph Abercromby's expedition. He was present at the capture of the Morne Chalot and the Morne Fortunée in St. Lucia, at St. Vincent, Trinidad, Porto Rico, and San Domingo, and returned home for his health in 1798. Nevertheless he had to return to Jamaica in 1800, when he was gazetted lieutenant-colonel in the 69th regiment, but had to come home again in 1803. In 1805 the 69th was ordered to India, but Colonel Brisbane's health was not strong enough for a further residence in a hot country, and he reluctantly went on half-pay, and devoted himself to astronomy in the new observatory which he built at Brisbane.

He still hoped for active service, and, on his promotion as colonel in 1810, accepted the post of assistant adjutant-general. In 1812 his old friend Arthur Wellesley, then the Marquis of Wellington, asked for his services, and he was made brigadier-general, and ordered to the Peninsula. He joined the army in the winter of 1812, and was posted to the command of the 1st brigade of the 3rd or fighting division, commanded by Picton. With Picton's division he was present at the battles of Vittoria, the Pyrenees, the Nivelle, the Nive, Orthez, and Toulouse, and was mentioned in despatches for his services at the last of these battles, where he was wounded. He had so thoroughly established his reputation in the south of France, that the Duke of Wellington recommended him for a command in America, and Major-general Brisbane, as he had become in 1813, accompanied his Peninsular veterans to Canada, and commanded them at the battle of Plattsburg. This command lost him the opportunity of being present at Waterloo, but he commanded a brigade in the army of occupation in France, and for some time the second division there. His services were also rewarded by his being made a K.C.B. with the other Peninsular generals in 1814, on the extension of the order of the Bath. On the withdrawal of the army of occupation he returned to Scotland.

In 1821 he was appointed governor of New South Wales, and his short government there marks an era of importance in the history of Australia, for it was during his term of office that emigration commenced. The first free emigrants were Michael Henderson and William Howe, who had gone out in 1818, during the government of General Macquarie. That governor, whom Brisbane succeeded on 1 Dec. 1821, had administered his government with larger views than the four naval captains who had preceded him, and who had been little more than superintendents of the convict establishment, but he held that Australia was intended for the 'emancipists,' or ticket-of-leave men, and rather discouraged immigration. Brisbane, on the contrary, unwisely threw all power into the hands of the immigrants, many of whom were mere adventurers. He found a colony of 23,000 inhabitants, and left 36,000, many of them free immigrants, with capital and a disposition to work. He introduced the cultivation of the vine, the sugar-cane, and the tobacco plant, and encouraged horse-breeding, and he took a particular interest in exploring the island. Under his auspices Mr. Oxley explored the coast to the northward of Sydney for a new penal settlement, and discovered the river to which he gave the name of Brisbane, and on which now stands the city of Brisbane, the capital of Queensland. But Brisbane was, according to Dr. Lang, 'a man of the best intentions, but disinclined to business, and deficient in energy' (Lang, *History of New South Wales*, 1st ed. i. 149), and he allowed the most terrible confusion to grow up in the finances of the colony. The colonial revenue consisted chiefly of the subsidy of 200,000*l.* a year paid by the government for the support of the convicts, and the corn for the colony had to be imported from India. This gave plenty of room for gambling, and by injudicious interference with the currency the finances got into such confusion, that speculators made large fortunes, and the government was often on the point of bankruptcy. The emancipists declared that all this gambling had been caused by the governor's favouritism; and though there is no ground for imputing wilful complicity to him, there is no doubt that the adventurers about him made use of their influence for their own advantage. The home government was at last obliged to take notice of these complaints, and on 1 Dec. 1825, after exactly four years in the colony he left for England, after weakly accepting a public dinner from the leading emancipists. On reaching England he was made colonel of the 34th regiment in 1826, and retired to Scotland, where he occupied himself with his observatory and his astronomical investigations.

H. M. S.

Brisbane's innate scientific tastes had received their confirmed bent towards astro

nomy from a narrow escape of shipwreck, owing to an error in taking the longitude during his voyage to the West Indies in 1795. He thereupon procured books and instruments, and made himself so rapidly and completely master of nautical astronomy, that on his return to Europe he was able to work the ship's way, and in sailing from Port Jackson to Cape Horn in 1825 predicted within a few minutes the time of making land, after a run of 8,000 miles. His observatory at Brisbane was the only one then in Scotland, except that on Garnet Hill at Glasgow. In equipment it was by far foremost, possessing a 4½-foot transit and altitude-and-azimuth instrument, both by Troughton, besides a mural circle and equatorial. With these Brisbane worked personally, and became skilled in their use.

During his Peninsular campaigns he took regular observations with a pocket-sextant, and, as the Duke of Wellington said, 'kept the time of the army.' While sheathing his sword on the evening of the battle of Vittoria he exclaimed, looking round from a lofty eminence, 'Ah, what a glorious place for an observatory!' In 1816 he was unanimously elected a corresponding member of the Paris Institute, in acknowledgment of his having ordered off a detachment of the allies reported as threatening its premises; and in 1818 the Duke of Wellington caused some tables, computed by him for determining apparent time from the altitudes of the heavenly bodies, to be printed at the headquarters, and by the press of the army—probably a unique example of military publication. His first communication to the Royal Society of Edinburgh, which had admitted him a member in 1811, was on the same subject. It was entitled 'A Method of determining the Time with Accuracy from a Series of Altitudes of the Sun taken on the same side of the Meridian' (*Trans. R. Soc. Edin.* viii. 497); and was succeeded in 1819 and 1820 by memoirs 'On the Repeating Circle,' and on a 'Method of determining the Latitude by a Sextant or Circle, with simplicity and accuracy, from Circum-meridian observations taken at Noon' (*ib.* ix. 97, 227).

On his appointment as governor of New South Wales in 1821, he immediately procured a valuable outfit of astronomical instruments by Troughton and Reichenbach, and engaged two skilled observers in Messrs. Rümker and Dunlop for the service of the first efficient Australian observatory. The site chosen was at Paramatta, fifteen miles from Sydney, and the building was completed (at his sole cost) and opened for regular work 2 May 1822. Before eight months had elapsed most of Lacaille's 10,000 stars had been, for the first time, reviewed (chiefly by Rümker); Encke's comet had been recaptured by Dunlop 2 June 1822, on its first predicted return, a signal service to cometary astronomy; besides careful observations by Brisbane himself of the winter solstice of 1822, and the transit of Mercury, 3 Nov. 1822 (*Trans. R. Soc. Edin.* x. 112). A considerable instalment of results was printed at the expense of the colonial department, and formed part iii. of the 'Philosophical Transactions' for 1829, but the great mass was digested into a star-catalogue by Mr. William Richardson, of the Greenwich observatory, and printed in 1835, by command of the lords of the admiralty, with the title 'A Catalogue of 7,385 Stars, chiefly in the Southern Hemisphere, prepared from Observations made 1822–6 at the Observatory at Paramatta.' The value of this collection, known as the 'Brisbane Catalogue,' was unfortunately impaired by instrumental defects. For these services Brisbane received the gold medal of the Astronomical Society, in delivering which, 8 Feb. 1828, Sir John Herschel dwelt eloquently upon his 'noble and disinterested example,' and termed him 'the founder of Australian science' (*Mem. Roy. Astron. Soc.* iii. 399). His observations with an invariable pendulum in New South Wales were discussed by Captain Kater in the 'Philosophical Transactions' for 1823. The Paramatta observatory was, soon after Brisbane's departure from the colony in 1825, transferred to the government; it was demolished in 1855, and an obelisk erected in 1880 to mark the site of the transit instrument.

After leaving New South Wales Brisbane devoted himself to scientific and philanthropic retirement, first at his seat of Makerstoun, near Kelso, and latterly at Brisbane House. Severe domestic afflictions visited him. By his marriage in 1819 with Anna Maria, heiress of Sir Henry Hay Makdougall, whose name he took in addition to his own in 1826, he had two sons and two daughters; all at various ages died before him. Nevertheless, he did not yield to despondency. Shortly after his return to Scotland he built and equipped at large cost (for the equatorial alone he paid Troughton upwards of 600*l.*) an observatory at Makerstoun—the third of his foundation—and took a personal share in the observations made there down to about 1847 (*Mem. Roy. Astron. Soc.* v. 349; *Monthly Notices*, vii. 156, 167). To his initiative it was due that Scotland shared in the world-wide effort for the elucidation of the problems of terrestrial magnetism set on foot by Humboldt in 1837. He founded at

Makerstoun in 1841 the first magnetic observatory north of the Tweed; and his discernment in entrusting its direction to John Allan Broun, and generous co-operation with his extended views, raised the establishment to a position of primary importance. The results, published at his and the Edinburgh Royal Society's joint expense (*Trans. R. Soc. Edin.* xvii.–xix. with suppl. to xxii.), formed the most valuable fruits of his enlightened patronage of science, and were rewarded with the Keith medal in 1848. This was the latest of his public honours. His membership of the Royal Society of London dated from 1810. He early entered the Astronomical Society, and was chosen one of its vice-presidents in 1827; honorary degrees were conferred on him at Edinburgh, Oxford, and Cambridge in 1824, 1832, and 1833 respectively; he was an honorary member of the Royal Irish Academy, and acted as president of the British Association at its Edinburgh meeting in 1834. In 1833 he succeeded Sir Walter Scott as president of the Royal Society of Edinburgh, an office which he retained till his death. He entrusted the society with the endowment of a medal, known as the 'Brisbane Biennial,' for the encouragement of scientific study, and he endowed another medal, to be awarded by the Scottish Society of Arts. He was created a baronet in 1836, and made G.C.B. in 1837. He became lieutenant-general in 1825, and general in 1841. His zeal for education took effect in his endowment of the Brisbane Academy at Largs. Everywhere his professions ripened into acts worthy of his character as a Christian and a gentleman. His death occurred 27 Jan. 1860, in the same room where he had been born 87 years previously.

Papers, vol. i.; Gent. Mag. 1860, pt. i. 298; Royal Military Cal.; Lang's Hist. of New South Wales; Braim's Hist. of New South Wales to 1846.] A. M. C.

BRISTOL, Earls of. [See Digby, John, first Earl, 1580–1654; Digby, George, second Earl, 1612–1677; Hervey, John, first Earl of the second creation, 1655–1751; Hervey, Augustus John, third Earl, 1724–1779; Hervey, Frederick Augustus, fourth Earl, 1730–1803.]

BRISTOL, RALPH de (*d.* 1232), bishop of Kildare, is mentioned as having granted fourteen days of indulgence to the abbey of Glastonbury. He became the first treasurer of St. Patrick's Cathedral, Dublin, in 1219, and was consecrated bishop of Kildare in 1223. He died about the beginning of 1232. He is said to have written the life of his patron, Lawrence O'Toole, archbishop of Dublin; but according to Baronius he supplied only the materials for the work, which was written by a monk of Auge.

[Ware's Works (ed. Harris), ii. 319; Cotton's Fasti Hibern. ii. 121, 189, 227.]

BRISTOW, EDMUND (1787–1876), painter, the son of an heraldic painter, was born at Windsor 1 April 1787, and passed his life at Windsor and Eton. At an early age he was patronised by the Princess Elizabeth, the Duke of Clarence (afterwards William IV), and others. He made sketches of well-known characters in Eton and Windsor, painted still life, interiors, and domestic and sporting subjects. He had great sympathy with animals, some power of rendering their characteristic movements and expressions, and is said to have given suggestions to Landseer. In 1809 he exhibited at the Royal Academy 'Smith shoeing a Horse,' and was an occasional exhibitor there and at the rooms of the British Institution, and at those of the Society of British Artists, until the year 1838, when he exhibited the 'Donkey Race' at Suffolk Street.

Bristow was a man of independent eccentric views, would not work to order, and sometimes refused to sell even his finished productions. He is said to have excelled in the delineation of monkeys, cats, and horses. His works, feeble in technique and little known, are scattered about in private galleries, some being in the royal collection at Windsor. Among them may be mentioned 'Monkey Pugilists,' 'Cat's Paw,' 'Law and Justice,' 'Incredulity,' 'The Rehearsal,' 'Pros and Cons of Life.' Engravings of a few of his works have appeared in the 'Sporting Magazine' and elsewhere.

He produced little during the fifteen years immediately preceding his death, which took place at Eton, 12 Feb. 1876.

[Catalogue of the Royal Academy; Catalogue of the British Inst.; Catalogue of the Society of British Artists; Windsor Gazette, 19 Feb. 1876; Windsor Express, 19 Feb. 1876; Redgrave's Dict. of Artists (1878).] W. H–H.

BRISTOW, RICHARD, D.D. (1538–1581), catholic divine, was born in 1538 at Worcester. 'Fortunæ mediocritas verâ nobilitate virtutis emersit' (Worthington, *Vita Bristoï*, 1). Having been instructed in grammar learning by Roger Goulburne, M.A., he matriculated in the university of Oxford, perhaps as a member of Exeter College. He took the degree of B.A. on 17 April 1559, and that of M.A., as a member of Christ

Church, on 25 June 1562, being 'now in great renown for his oratory' (Wood, *Fasti*, ed. Bliss, i. 161). At this period Bristow and Edmund Campion were 'the two brightest men of the university,' and upon this account were chosen to entertain Queen Elizabeth with a public disputation on the occasion of her visit to Oxford. This they did with great applause on 3 Sept. 1566 (Wood, *Annals*, ed. Gutch, ii. 159). About this time Bristow devoted himself to the study of divinity, and became so noted for his learning that Sir William Petre appointed him to one of his fellowships in Exeter College, to which he was admitted on 2 July 1567 (Boase, *Register of Exeter Coll.* 45). It is related that in a set disputation in the divinity school he put Laurence Humphrey, the regius professor, 'to a non-plus.'

At length, being convinced that he had erred in his religious opinions, he left the college in 1569 and proceeded to Louvain, where several learned catholics were residing. There he became acquainted with Dr. William Allen, who at once recognised his rare abilities and appointed him the first moderator or prefect of studies in his newly founded seminary at Douay. Bristow was always regarded by Allen as his 'right hand.' He was ordained at the Easter ordination held at Brussels in March 1572-3, being the first member of Douay College who entered the priesthood. Just before this (20 Jan. 1572-3) he had graduated as a licentiate of divinity in the university of Douay, and he was created a doctor in that faculty on 2 Aug. 1575. Meanwhile his mother and his whole family had gone over from England to Douay, viz. five children with a nephew and a niece: and also his uterine brother, Louis Vaughan, a layman, who being a good economist was employed for many years as house steward of the college. When Allen removed the seminary to Rheims (1578), he placed it under the care of Bristow, whose laborious life was passed in reading, teaching, and publishing books of controversy. 'He did great things for God's church,' says Pits, 'and he would have done still greater if bad health had not prevented him.' On 13 May 1581 he went to Spa on account of declining health. He returned on 26 July without having derived benefit from drinking the waters, and he was advised to try his native air. Accordingly, on 23 Sept. he set out for England, and soon after reaching the residence of Mr. Richard Bellamy, a catholic gentleman, at Harrow-on-the-Hill, Middlesex, he died there of consumption on 14 Oct. 1581 (*Diaries of the English College, Douay*, 183). His death was regarded as a severe loss to the catholic cause, for according to the character given of him in the college archives he might rival Allen in prudence, Campion in eloquence, Wright in theology, and Martin in languages (Dodd, *Church Hist.* ii. 60).

His works are: 1. 'A Briefe Treatise of diuerse plaine and sure wayes to finde out the truthe in this doubtful and dangerous time of Heresie: conteyning sundry worthy Motiues vnto the Catholike faith, or considerations to moue a man to beleue the Catholikes and not the Heretikes,' Antwerp, 1574, 1599, 12mo. A third edition, entitled 'Motives inducing to the Catholike Faith,' was published [at Douay?] in 1641, 12mo. The 'Motives' elicited a reply from William Fulke, D.D., entitled 'A Retentive to stay good Christians in the true Faith & Religion, against the Motiues of Rich. Bristow,' 1580. 2. 'Tabula in Summam Theologicam S. Thomæ Aquinatis,' 1579. 3. 'A Reply to Will. Fulke, in Defense of M. D. Allens Scroll of Articles, and Book of Purgatorie,' Louvain, 1580, 4to. Dr. Fulke soon brought out 'A reioynder to Bristows Replie in defence of Allens Scrole of Articles and Booke of Purgatorie,' 1581. 4. 'Demaundes to be proponed of Catholikes to the Heretics,' 8vo. Several times printed without place or date. This was answered in a book entitled 'To the Seminary Priests late come over, some like Gentlemen,' &c., London, 1592, 4to. 5. A Defence of the Bull of Pope Pius V. 6. Annotations on the Rheims translation of the New Testament, manuscript. 7. 'Carmina Diversa,' manuscript. 8. 'Richardi Bristoï Vigorniensis, eximii svo tempore Sacræ Theologiæ Doctoris & Professoris, Motiva omnibus Catholicæ Doctrinæ orthodoxis cultoribus pernecessaria; vt quæ singulas omnium ætatum ac præsentis maximè temporis hæreses funditùs extirpet: Romanæ autem Ecclesiæ auctoritatem fidemq. firmissimis argumentis stabiliat,' 2 vols. Atrebati (Arras), 1608, 4to. The second volume is entitled 'Antihæretica Motiva, evnctis vnivs veræ atqve solivs salvtaris Christiano-Catholicæ Ecclesiæ Fidei & Religionis Orthodoxis cultoribus longè conducibilissima.' This book was translated into English by Thomas Worthington, who has prefixed a life of the author and also a compendium of the biography in Latin verse. It is a much larger treatise than the original English 'Motives.' 9. 'Veritates aureæ S.R. ecclesiæ autoritatibus vet. patrum, &c.,' 1616, 4to. A posthumous work.

Besides writing the above works, he, in conjunction with Dr. William (afterwards cardinal) Allen, revised Gregory Martin's English translation of the Holy Scriptures, commonly known as the 'Douay Bible.'

[Life by Worthington, prefixed to the Motiva; Diaries of the English Coll. Douay, pp. xxix, xxxii, xxxvi, lxxiii, 141, 183, 270, 273, 274, and index; Letters and Memorials of Card. Allen; Wood's Athenæ Oxon. (Bliss), i. 482, and Fasti, i. 156, 161; Dodd's Church Hist. ii. 59; Pits, De Angliæ Scriptoribus, 779; Tanner's Bibl. Brit. 127; R. BRIT, BRYTTE, or BRITHUS, WALTER (*fl.* 1390), was a fellow of Merton College, Oxford, and the reputed author of several works on astronomy and mathematics, as well as of a treatise on surgery. He has also been described as a follower of Wycliffe, and as author of a book, 'De auferendis clero possessionibus' (see BALE, *Script. Brit. Cat.* vi. 94, p. 503; J. SIMLER's epitome of C. GESNER's *Bibliotheca*, 248 *b*, Zürich, 1574, folio; WOOD, *Antiquities of Oxford*, i. 475). If this description be correct, Brit is no doubt identical with the Walter Brute, a layman of the diocese of Hereford, whose trial before Bishop John Trevenant of Hereford in 1391 is related at great length by Foxe (*Acts and Monuments*, i. 620-54, 8th ed. 1641). Foxe prints the articles of heresy with which Brute was charged, the speech in which he defended himself, and his ultimate submission of his opinions to the determination of the church. Thirty-seven articles were then drawn up and sent to the university of Cambridge to be confuted. Brute, however, appears to have escaped further molestation. With respect to Brit's scientific writings considerable confusion prevails, and it seems probable that not one of the extant works ascribed to him is really his. The work most frequently cited is the 'Theorica Planetarum' (LELAND, *Comm. de Script. Brit.* p. 397), which bears his name in two manuscripts in the Bodleian Library (Digby, xv. ff. 58 *b*-92, and Wood, 8 *d*, f. 93); but it is claimed for Simon of Bredon, also fellow of Merton, in the verses subjoined to another copy in the same collection (Digby, xlviii. f. 112 *b*), which, to judge from their contents, have a distinctly stronger presumption in favour of their accuracy. The work in question, which begins with the words 'Circulus ecentricus, circulus egresse cuspidis, et circulus egredientis centri idem sunt,' is further to be distinguished from another treatise with the same title, of which the opening words are 'Circulus ecentricus vel egresse cuspidis, vel egredientis centri, dicitur,' and of which the authorship is shown by the notices collected by Baldassare Boncompagno (*Della Vita e delle Opere di Gherardo Cremonese e di Gherardo di Sabbionetto*, pp. 76–100, Rome, 1851, 4to) to be really due to the younger Gerard of Cremona (Gerardus de Sabloneto) in the thirteenth century. The latter has been repeatedly confounded with the 'Theorica' indifferently assigned by the bibliographers to Brit and Bredon. Another treatise mentioned by Bale as the composition of Brit is the 'Theoremata Planetarum,' which Tanner cites as that existing in the Digby MS. exc. f. 190 *b* (now f. 169 *b*); but this manuscript dates from about the year 1300, and the work is by John Halifax (J. de Sacro Bosco). Finally, the 'Cirurgia Walteri Brit' named in the ancient table of contents in another Digby MS. (xcviii. f. 1 *b*) has nothing corresponding to it in the volume itself but a set of English medical receipts whose author is not stated (f. 257).

[Authorities cited in text, and Leland's Collectanea, v. 55; Tanner's Bibl. Brit. 127.] R. L. P.

BRITHWALD. [See BRIHTWALD.]

BRITHWOLD. [See BRIHTWOLD.]

BRITO or LE BRETON, RANULPH (*d.* 1246), canon of St. Paul's, is first mentioned in the year 1221 as a chaplain of Hubert de Burgh. During the administration of his patron he stood high in the favour of Henry III, and became the king's treasurer. On the fall of Hubert in 1232 many of the officers who had been appointed through his influence were removed, and their places given to countrymen of the new minister, Peter des Roches, the Poitevin bishop of Winchester. Among those displaced was Ranulph Brito, who was accused of having misapplied the revenues which passed through his hands, and was subjected to a fine of 1,000*l.* He was also sentenced to banishment, but this penalty was afterwards remitted. Whether the charges brought against him were well founded or not, it is significant that his successor, Peter de Rievaulx (De Rivallis), is described by Matthew Paris as the 'nephew or son' of the bishop of Winchester.

In 1239 a certain William, who lay under sentence of death for various crimes, endeavoured to save his own life by bringing accusations of treason against several persons of eminent position. Ranulph Brito, who

was then canon of St. Paul's, was one of those denounced; and at the king's instance he was arrested by the mayor of London and committed to the Tower. The dean and chapter of St. Paul's, in the absence of the bishop of London, immediately pronounced a general excommunication against all who had any share in this outrage upon a member of their body, and placed the cathedral under an interdict. The bishop of London supported the action of the chapter, and, finding the king unmoved by his remonstrances, threatened to extend the interdict to the whole of the city. The legate, the archbishop of Canterbury, and several other prelates added entreaties and menaces, and the king was obliged to yield. He at first struggled to obtain from the chapter an undertaking that the prisoner, if released, should be ready to appear when called upon to answer the charge made against him; but they refused to entertain the demand, and Ranulph was set unconditionally at liberty. Shortly afterwards the informer confessed the falsity of the accusations which he had made, and was brought to the scaffold. Although admitting Ranulph's innocence of the crime of treason, Matthew Paris intimates that he had amassed a large fortune by various acts of extortion, the canons of Missenden being particularly mentioned as having suffered from his rapacity. He died suddenly in 1246, having been seized with apoplexy while watching a game of dice.

The name of Ranulph Brito has been erroneously inserted by Dugdale and others in the list of chancellors. This mistake arose from the word *consiliarius*, used by Matthew Paris, having been printed in Wats's edition as *cancellarius*.

[Matt. Paris's Chron. Maj. (ed. Luard), iii. 220, 543-545, iv. 588; Rot. Claus. i. 547; Foss's Lives of the Judges, ii. 262.] H. B.

BRITON or BRETON, WILLIAM (*d.* 1356), theologian, is described as a Franciscan by all the literary biographers (LELAND, *Comm. de Script. Brit.* p. 356, &c.); according, however, to H. O. Coxe (*Catal. Codd. MSS. in Coll. Aulisque Oxon.* i. 4), he was a Cistercian. No fact is known of his life, but Bale (*Script. Brit. Cat.* v. 89), who claims him, apparently by a guess, for a Welshman, places his death in 1356 at Grimsby. Briton's works, enumerated by Bale, are principally concerned with dialectics. His fame, however, rests upon his 'Vocabularium Biblie,' a treatise explanatory of obscure words in the Scriptures. The prologue and some other parts are in Latin verse. These, with additional specimens, have been printed by A. M. Bandini in his 'Catal. Codd. Latin. Biblioth. Medic. Laurent.' iv. 213 et seqq., Florence, 1777. Extracts are given by Ducange, 'Glossar. Med. et Infim. Latin.' præf., cap. xlix.

[Authorities cited above, and Fabricius, Biblioth. Lat. Med. et Inf. Æt. i. 261, ed. Florence, 1858.] R. L. P.

BRITTAIN, THOMAS (1806–1884), naturalist, was born at Sheffield on 2 Jan. 1806. He was educated at a private school. He was engaged during the greater part of his life as a professional accountant, but became interested in natural science, and was very skilful in the preparation of diagrams and in the mounting of objects for the microscope. He settled in Manchester about 1842, and continued to live there during the remainder of his life. In some contributions to Axon's 'Field Naturalist' (Manchester, 1882, p. 148), he has told the story of his scientific studies from the time of his first microscope, which was obtained in 1834. In December 1858 he was one of the promoters of a Manchester Microscopical Society, which ultimately became a section of the Manchester Literary and Philosophical Society. When a second Manchester Microscopical Society—a more popular association—was established in 1879, he repeatedly held the office of vice-president, and was afterwards president. On his retirement, from failing health and advanced years, he was presented with an address at the Manchester Athenæum, 4 Oct. 1883. Brittain was connected with other scientific societies in Manchester and London. He was a clear and animated speaker, and for many years lectured on various subjects of natural science to a great number of the mechanics' and similar institutions. He made frequent contributions to the 'Manchester City News,' 'Unitarian Herald,' and other papers on matters of scientific interest. He was also connected with the unsuccessful attempt to establish a Manchester aquarium, and had a short experience, from 1858 to 1860, of municipal work. He died at Manchester on 23 Jan. 1884. His writings are: 1. 'Half a Dozen Songs by Brittanicus,' Manchester, 1846, privately printed. 2. 'A General Description of the Manchester Aquarium,' 1874, a pamphlet guide. 3. 'Micro-Fungi, when and where to find them,' Manchester, 1882. This, in spite of some obvious defects, has been of considerable use to local students. It is arranged in the order of the months, and first appeared in the 'Northern Microscopist.' 4. 'Whist: how to play and how to win, being the result of sixty years' play,' Manchester, 1882. Brittain did not make any claim to be a discoverer, but he was a

pleasant exponent of science, and did much to popularise the taste for natural history in his adopted home.

[Manchester Guardian, 24 Jan. 1884; Unitarian Herald, 1 Feb. 1884; information from friends and personal knowledge.] W. E. A. A.

BRITTON, JOHN. [See BRETON.]

BRITTON, JOHN (1771–1857), antiquary, topographer, and miscellaneous writer, was born on 7 July 1771 at Kington St. Michael, near Chippenham, Wiltshire, where his father was a small farmer, maltster, baker, and village shopkeeper. After a desultory education, in the course of which he acquired a love of reading, he went at sixteen to London, where he was apprenticed by an uncle to a tavern-keeper on Clerkenwell Green. Here he bottled wines in a cellar, snatching an occasional hour for the perusal of a few books. Here, too, he made the acquaintance of Edward William Brayley [q.v.], who joined him in writing and issuing a popular ballad. He was next employed as a cellarman at the London Tavern, and in Smithfield, and as a clerk in an attorney's office. Amid these employments, and the compilation of street song-books, he was led by the success of Sheridan's 'Pizarro' to produce in 1799 his first book, 'The Adventures of Pizarro, preceded by a sketch of the voyage and discoveries of Columbus and Pizarro, with biographical sketches of Sheridan and Kotzebue.' The publisher of a dramatic miscellany to which he contributed had long before received subscriptions for a topographical work, 'The Beauties of Wiltshire.' He asked Britton to undertake its preparation, and, with the promise of Brayley's assistance, Britton consented. Two volumes appeared in 1801, and were successful. The third and concluding volume, to which Britton prefixed an interesting autobiographical preface, did not appear until 1825. Meanwhile, a publishing firm which had shared in the production of the 'Beauties of Wiltshire' engaged Britton and Brayley to co-operate in a larger enterprise, the first instalment of which appeared also in 1801 with the title 'The Beauties of England and Wales, or original delineations, topographical, historical, and descriptive, of each county. By Edward Brayley and John Britton.' The names of the two 'editors,' as they at first styled themselves, alternately took precedence of each other on the title-pages up to the seventh volume, after which each was assigned to its respective author. In the earlier volumes the letterpress seems to have been mainly Brayley's, while the general editing, including the direction of artists and engravers, was Britton's. With the completion of the first five volumes in 1803–4, subscribers were informed that the 'authors' had travelled over an extent of 3,500 miles to inspect the localities described. There had been scarcely any work of the kind so comprehensive in its plan since the appearance of the 'Magna Britannia' (1720–31). Vol. vii., containing Lancashire, Leicestershire, and Lincolnshire, was wholly Britton's composition, but difficulties with the proprietors suspended his editorship. Subsequently he contributed Norfolk and Northamptonshire to vol. xi. (1810), and Wiltshire to vol. xv. (1814). Britton estimated the sum expended on the work during his connection with it as joint-editor at 50,000*l.* Partly while he was occupied with it he contributed to Rees's 'Cyclopædia' the articles on British topography. That on Avebury he afterwards expanded for the 'Penny Cyclopædia,' for which he wrote the account of Stonehenge. He also contributed the articles on British topography and antiquities to Arthur Aikin's 'Annual Review.'

The proprietors of the 'Beauties' wished to restrict the illustrations of antiquities. Britton therefore produced separately the 'Architectural Antiquities of Great Britain represented and illustrated in a series of views, elevations, plans, sections, and details of various ancient English edifices, with historical and descriptive accounts of each,' 4 vols. 1805–14, and to these was added in 1818–26 a supplementary volume—the best of the series—'Chronological History and Graphic Illustrations of Christian Architecture in England, embracing a critical enquiry into the rise, progress, and perfection of this species of architecture.' The letterpress was meagre, but the artistic excellence of the illustrations procured success for what Southey (*Quarterly Review* for September 1826) pronounced to be the 'most beautiful work of the kind that had ever till then appeared.' Eight thousand pounds was expended on the work, in which Britton held a third share. His next important undertaking was the 'Cathedral Antiquities of England, or an historical, architectural, and graphic illustration of the English Cathedral Churches,' 14 vols. 1814–35. The title of the first volume is 'The History and Antiquities of the Cathedral Church of Salisbury, illustrated by a series of engravings of views, elevations, and plans of that edifice; also etchings of the ancient monuments and sculpture, including Biographical Anecdotes of the Bishops and of other eminent persons connected with the Church.' No complete publication of the kind had appeared since Browne Willis's 'Survey of the Cathedrals' in 1742, and more than 20,000*l.* was expended on the production of

Britton's work. But, in spite of its excellence, it was so little a financial success, that its publication had to be cut short, leaving untouched the cathedrals of Carlisle, Chester, Chichester, Durham, Ely, Lincoln, and Rochester. At the end of vol. iv., while thanking the public for its purchase of 800 copies, Britton complains with natural warmth of the scant encouragement or information received from cathedral authorities. To No. 53 (August 1835) he prefixed a sketch of the history of the work, with a continuation to that date of his literary autobiography since 1825, the period which it had reached in vol. iii. of the 'Beauties of Wiltshire.' During the progress of the work he produced, with the co-operation of Pugin, the 'Specimens of Gothic Architecture' (1823-5), and the 'Architectural Antiquities of Norway' (1825). In 1825-8 appeared his 'Public Buildings of London,' engraved and described, and in 1832-8 his useful 'Dictionary of the Architecture and Archæology of the Middle Ages.' He co-operated with Brayley in the production of the valuable 'History and Description of the Ancient Palace and Houses of Parliament at Westminster' (1834-6), and contributed the letterpress to the 'Architectural Description of Windsor' (1842).

On 7 July 1845 Britton was entertained at dinner at Richmond by a number of admirers. After the formation of a Britton Club in the December of the same year, a sum of nearly 1,000*l.* was raised by a subscription, Britton having previously intimated his intention to devote any money so raised to the publication of an autobiography. He accepted an annual pension on the civil list procured for him by Mr. Disraeli when chancellor of the exchequer. In 1850 appeared 'The Autobiography of John Britton. In three parts.' Part i. scarcely brought down his autobiography further than 1825, but it was written very much more fully than the previous fragments. Part ii. (and last) is a 'descriptive account' of his literary productions of every kind, drawn up by Mr. T. E. Jones, who had for fifteen years been his amanuensis and secretary. Britton died in London on 1 Jan. 1857. There is a succinct but adequate account of Britton's services to archæological art in Mr. Digby Wyatt's obituary 'notice' of him read before the Royal Institute of British Architects on 12 Jan. 1857, and published in the volume of its 'Papers' for 1856-7.

Britton was for many years an active member of the Royal Literary Fund, and his protests against the provisions of the Copyright Acts compelling the transmission of eleven copies of every work, however costly, published in the United Kingdom to certain public and other libraries, contributed to the reduction of that number to six. He was instrumental in founding the Wiltshire Topographical Society. Having corresponded on the subject in 1831 with the first Lord Lansdowne, he proposed in 1837 the formation of a society to be called 'The Guardian of National Antiquities,' and in 1840 he published a 'Letter to Joseph Hume on the subject of making some government provision for preserving the ancient monuments of Great Britain.' Britton himself successfully promoted the reparation of Waltham Cross and of the parish church of Stratford-upon-Avon.

Several of Britton's minor publications not previously noticed deserve mention. In 1816 he issued an engraved view of Shakespeare's bust in the church of Stratford with 'Remarks,' in which he disputed the genuineness of the accepted portraits, and contended for the superior value of the bust as a likeness. His 'Remarks on the Life and Writings of Shakespeare' in the Whittingham edition of 1814 were expanded in successive editions, with a useful list appended of essays and dissertations on Shakespeare's dramatic writings. Britton's 'Memoir of Aubrey,' 1845 (for the Wiltshire Topographical Society), is one of the best biographies of the Wiltshire antiquary that have appeared, and contains interesting extracts from Aubrey's unpublished correspondence. For the same society Britton edited all that is valuable in Aubrey's (until then unpublished) 'Natural History of Wiltshire,' 1843. In 1830 he published an annotated edition of Anstey's 'New Bath Guide,' and in 1848 'The Authorship of the Letters of Junius elucidated, including a biographical memoir of Colonel Barré,' to whom he attributed them (see *Quarterly Review* for December 1851). Besides being one of the most continuously productive writers and editors of his time, Britton for many years performed the duties of surveyor and clerk to a local board of commissioners.

[Britton's writings, especially his Autobiography; Gent. Mag. February 1857; Builder, 10 Jan. 1857; Brit. Mus. Cat.] F. E.

BRITTON, THOMAS (1654?-1714), the celebrated 'musical small-coal man,' was born at either Higham Ferrers or Wellingborough, Northamptonshire, about the middle of the seventeenth century. He came up to London at an early age and apprenticed himself to a vendor of small coal in St. John Street, Clerkenwell, for seven years. At the end of this time his master gave him a small sum not to set up a rival establish-

ment. Britton accordingly returned to his native place, but his money being soon spent he came back to London and hired a stable near his old quarters, where he started in business for himself. He was settled in this manner in the year 1677, at which time it is recorded that he paid 4*l.* a year rent. His house was at the north-east corner of Jerusalem Passage, on the site now occupied by the Bull's Head Inn. Britton divided the stable into two stories, the lower of which he used as his coal shop, while the upper formed a long low room to which access was gained by a ladder-like staircase from the outside. 'His Hut wherein he dwells,' says Britton's neighbour, Edward Ward, 'which has long been honoured with such good Company, looks without Side as if some of his Ancestors had happened to be Executors to old snorling Diogenes, and that they had carefully transplanted the Athenian-Tub into Clerkenwell; for his House is not much higher than a Canary Pipe, and the Window of his State Room but very little bigger than the Bunghole of a Cask.' In these unpromising quarters he established, in 1678, his celebrated musical club, the idea of which was originated, or at least fostered, by Roger L'Estrange, himself a good performer on the bass viol. Here on every Thursday for nearly forty years were held those remarkable concerts of vocal and instrumental music which are so curious a feature in the social life of the time. The admission was at first without payment, but (according to Walpole) after a time a yearly subscription of 10*s.* was charged, and coffee was supplied at 1*d.* a dish. This statement is, however, rendered doubtful by the following entry from Thoresby's 'Diary:' '5 June 1712. In our way home called at Mr. Britton's, the noted small-coal man, where we heard a noble concert of music, vocal and instrumental, the best in town, which for many years past he has had weekly for his own entertainment, and of the gentry, &c., gratis, to which most foreigners of distinction, for the fancy of it, occasionally resort.' The greatest performers of the day, both professional and amateur, might be heard here. Handel played the organ (which had only five stops), Pepusch presided at the harpsichord, 'a Rucker's virginal, thought the best in Europe,' Banister played first violin, and John Hughes, Abel Whichello, J. Woolaston, and many other amateurs took part in the performances, while leaders of fashion like the Duchess of Queensberry were amongst the audience. At one time Britton took a more commodious room in the next house for his concerts, but this was not a success; so he returned to his old quarters, where, as Ward expresses it with more force than elegance, 'any Body that is willing to take a hearty Sweat, may have the Pleasure of hearing many notable Performances in the charming Science of Musick.' But Britton's tastes were not confined to music alone. From a neighbour of his, Dr. Garencier, physician to the French embassy, he acquired a love of chemistry, and constructed for himself at a very small cost what Hearne calls 'an amazing elaboratory.' It is said that a Welsh gentleman was so delighted with this structure that he commissioned Britton to make him a similar one in Wales for a handsome fee. It was probably his love of chemistry which caused Britton to turn his attention to the occult sciences, of works relating to which he formed a large and valuable collection. His knowledge of bibliography brought him into connection with Harley, earl of Oxford, the Duke of Devonshire, and the Earls of Pembroke, Winchilsea, and Sunderland. These noblemen used every Saturday throughout the winter to form book-hunting expeditions in the city. Their meeting-place was at Christopher Bateman's in Paternoster Row, where they were often joined by Britton, who would appear in his blue smock and with the coal-sack which he had been carrying about the streets all the day; for in spite of his literary and artistic tastes he continued until his death to sell coal in the streets of London. The collection known as the 'Somers Tracts' is said to have been formed by him and sold to Lord Somers for over 500*l.* His death was no less singular than his life. A Mr. Robe, a Middlesex magistrate who frequented Britton's concerts, one Thursday brought with him (unknown to the small-coal man) a famous ventriloquist named Honeyman. This man, who was a blacksmith living in Bear Street, Leicester Square, was known as 'the talking smith,' and many stories are related of his wonderful powers. Britton was known to be superstitious, and by way of playing upon his fears Honeyman announced in an assumed voice that unless he immediately fell upon his knees and repeated the Lord's prayer he would die within a few hours. The terrified small-coal man immediately did as he was told, but the fright was too much for him, and he actually died, aged upwards of sixty, within a few days. His funeral, which took place on 1 Oct. 1714, attracted a large concourse of people. He was buried in a vault at St. James's, Clerkenwell, but no monument marks the exact spot. Britton left but little property to his widow, save his collections of books and

musical instruments. The latter, together with his music, were sold by auction at his friend Ward's on 6, 7, and 8 Dec. 1714, and fetched about 180*l.* The catalogue is still extant, and has been reprinted in Hawkins's 'History of Music.' His books, which numbered about fourteen hundred volumes, were sold later. Britton's intimacy with so many persons of high rank gave rise to all sorts of rumours as to his being a jesuit, a magician, and such like, though in reality 'he was an extraordinary and a very valuable man, much admired both by the gentry, even of those of the best quality, and by all others of the more inferior rank that had any manner of regard for probity, ingenuity, diligence, and humility.' In person he was short, stout, and of 'an honest, ingenuous countenance.' He was twice painted by Woolaston: (1) in his smock with his coal-measure in his hand, and (2) in the act of tuning a harpsichord. The former is in the National Portrait Gallery, and was engraved by J. Simon in mezzotint. Under the print are some eulogistic verses by Britton's friend, the poet Hughes, beginning

Tho' mean thy rank, yet in thy humble cell.

From this portrait is derived the engraving by Maddocks in Caulfield's 'Remarkable Persons' (i. 77). The second picture seems to have disappeared, but it is known by a mezzotint engraving by Thomas Johnson, under which are verses attributed to Prior, the first line of which runs

Tho' doom'd to small-coal, yet to Arts ally'd.

The head from this portrait was copied by C. Grignion for Hawkins's 'History.' There is a small full-length of Britton, with his coal-sack over his shoulder, in the 'London Magazine' for February 1777.

BRIWER, WILLIAM. [See BREWER.]

BRIXIUS. [See BRICE.]

BROADBENT, WILLIAM (1755–1827), unitarian minister, the son of William and Elizabeth Broadbent, was born 28 Aug. 1755. He was educated for the ministry at Daventry academy (August 1777–June 1782), first under Thomas Robins, who resigned the divinity chair in June 1781 from loss of voice, and afterwards under Thomas Belsham [q.v.] Broadbent became classical tutor to the academy in August 1782, and in January 1784 he exchanged this appointment for that of tutor in mathematics, natural philosophy, and logic. Belsham resigned the divinity chair in June 1789, having become a unitarian, and the academy was removed in November to Northampton. Broadbent continued to act as tutor till the end of 1791, when he became minister at Warrington (he took out his license on 18 Jan. 1792), and removed to Cockey Moor. At this time his views were of the average Daventry type. But at Warrington he re-examined his theological convictions, and becoming a unitarian of the Belsham school, he succeeded in carrying nearly all his congregation with him. Broadbent from his eighteenth year kept up a close friendship with Belsham; in Williams's chaotic 'Memoirs' of Belsham (1833, 8vo) are some fragments of their correspondence. Biblical exegesis was Broadbent's favourite study, and textual interpretation played a prominent part in his preaching. He resigned his Warrington charge in the spring of 1822, induced by broken health and the depressing effects of the loss of his son. He died at Latchford, near Warrington, on 1 Dec. 1827, and was buried in the Warrington chapel on 6 Dec.

THOMAS BIGGIN BROADBENT (1793–1817), only child of William Broadbent, born at Warrington on 17 March 1793, entered Glasgow College in November 1809. After graduating in April 1813 he became classical tutor in the unitarian academy at Hackney, an office he filled till 1816, preaching latterly at Prince's Street Chapel, Westminster, during a vacancy. His pulpit powers were remarkable. Resigning his London work, he returned to Warrington to pursue his ministerial training as his father's assistant. He died of apoplexy on 9 Nov. 1817. He prepared for the press, in 1816, portions (1 and 2 Cor., 1 Tim., and Titus) of Belsham's 'Epistles of Paul the Apostle,' published 1822, 4 vols. 8vo. He also edited the fourth edition, 1817, 8vo, of the 'Improved Version' of the New Testament, originally published 1808, 8vo, under Belsham's superintendence. Two of his sermons, published posthumously in 1817, reached a second edition.

[Monthly Repos. 1810, p. 362, 1817, p. 690 (memoir by H. G. [Holbrook Gaskell?]), 1818,

p. 1 sq. (portrait of T. B. Broadbent from miniature by Partridge), 1822, pp. 198, 285, 289, 1828, p. 59; Williams's Mem. of Belsham, 1833, p. 610; information from Rev. R. Pilcher.] A. G.

BROADFOOT, GEORGE (1807–1845), major, the eldest of three brothers who all fell in the service of their country, entered the Indian army as an ensign in the 34th regiment of Madras native infantry, in January 1826. The greater part of his earlier service was passed with his regiment. Returning to England on furlough in 1836, he held the appointment of orderly officer at Addiscombe for thirteen months. In May 1841 he was sent to Cabul in command of the escort which accompanied the families of the Afghan chiefs, Shah Sujah and Zemán Shah to that place. On reaching Cabul, a portion of the escort was formed into a company of sappers and miners, which, under the command of Broadfoot, marched with Sir Robert Sale's force from Cabul to Jellálabád in October 1841, Broadfoot being specially mentioned in the despatches for his gallantry in the actions with the Afghans between Cabul and Gandamak. At Jellálabád Broadfoot became garrison engineer, and by his skill and vigour speedily restored the defences of the town, which had been found in a ruinous condition. During the siege of Jellálabád by the Afghans, Broadfoot was the life and soul of the garrison, and aided by his friend Havelock, then a captain of foot [see HAVELOCK, SIR HENRY], was instrumental in preventing a capitulation, which at one time had been resolved on by Sir Robert Sale and a majority of the principal officers of the force. In one of the sorties made by the beleaguered garrison Broadfoot was severely wounded. He subsequently accompanied General Pollock's army of retribution to Cabul, again distinguishing himself in the actions which were fought at Mammu Khél, Jagdallak, and Tezín. At the close of the war he was created a companion of the Bath, and was appointed commissioner of Moulmein, from which office he was transferred to that of agent to the governor-general on the Sikh frontier.

While filling the latter post Broadfoot was present at the sanguinary engagements of Mudki and Ferozshah, in the last of which (21 Dec. 1845) he was mortally wounded. His death and his services were thus described in Sir Henry Hardinge's report on the battle: 'It is now with great pain that I have to record the irreparable loss I have sustained, and more especially the East India Company's service, in the death of Major Broadfoot of the Madras army, my political agent. He was thrown from his horse by a shot, and I failed in prevailing upon him to leave the field. He remounted, and shortly afterwards received a mortal wound. He was brave as he was able in every branch of the political and military service.'

[Annual Register, 1845; Kaye's History of the War in Afghanistan, vols. ii. and iii. 3rd ed. 1874; India Office records.] A. J. A.

BROADWOOD, JOHN (1732–1812), pianoforte manufacturer, was born at Cockburnspath, Dunbar, N.B., in 1732. He came of an old family of Northumbrian yeomen, who in the sixteenth century owned land near Hexham, but in the eighteenth century moved into Scotland. Broadwood's grandfather was John Broadwood of Oldhamstock, East Lothian, who married (1679) one Katherine Boan. His youngest son, James, married Margaret Pewes, and their eldest son was the celebrated pianoforte maker. Broadwood is said to have walked from Scotland to London to seek his fortune as a cabinet-maker. He found employment and ultimately entered into partnership with Burkhardt Tschudi, a Swiss harpsichord maker, who came to England in 1718, and in 1732 had taken the house in Great Pulteney Street, which is still the place of business of his descendants. In 1769 Tschudi retired (reserving to himself certain royalties and the right of tuning harpsichords at the oratorios) in favour of Broadwood, who had married his daughter Barbara, though for some time longer the style of the firm remained Tschudi & Broadwood. After the death of Tschudi (in 1773) his son entered for a short time into partnership with Broadwood, but in 1783 the business was in the sole hands of the latter, and remained so until 1795, when Broadwood's eldest son, James Tschudi Broadwood, was taken into partnership with his father. The latter died in 1812 and was buried in the burial-ground of the methodist chapel in Tottenham-Court Road.

Without entering into technical details it is impossible to describe the changes and improvements introduced in the construction of pianofortes by Broadwood and his partners. The history of the firm during this period is practically the history of the pianoforte, and the instruments manufactured in Great Pulteney Street acquired a European reputation by means of their admirable qualities. Broadwood's first patent, dated 17 July 1783, is for a 'new constructed pianoforte, which is far superior to any instrument of the kind heretofore constructed,' but it is known that prior to this he was engaged in assisting

Americus Backers in perfecting the so-called English or direct lever action, which was patented by Backers's apprentice after his master's death in 1777. Personally Broadwood was an amiable and cultivated man, and his society was sought after by many of the most influential personages of the day. He was a clear-headed man of business, and very independent and energetic. There is a portrait of him painted at the age of eighty by John Harrison, which was engraved by W. Say and published on 1 Aug. 1812.

[Grove's Dict. of Musicians, i. 278 *a*, &c.; Specifications of Patents relating to Music and Musical Instruments; information from Miss Broadwood and Mr. A. J. Hipkins; International Inventions Exhibition Catalogues, &c.]

W. B. S.

BROCAS, SIR BERNARD (1330?–1395), third son of Sir John de Brocas, knight, of Clewer and Windsor, who was master of the horse to King Edward III, was born about 1330. The family came from Gascony, where they had fought and suffered for the English cause against the French for several generations before John de Brocas became an officer of the household of Edward II, and settled in England. Brocas was one of the favourite knights of the Black Prince, with whom he was certainly present at the battle of Poitiers, almost certainly at Crécy and Najara. After the peace of Brétigny, he and other members of his family were employed in the settlement of Aquitaine, where he held the office of constable, and on the death of the prince he was specially invited to his funeral. He was also a friend of William of Wykeham, whose first acquaintance with his family seems to have been connected with the building of Windsor Castle, in the earlier operations of which Sir John had been employed. Of the three knights present by invitation at Wykeham's enthronement at Winchester, Brocas was one. In the year 1377, Wykeham's first act, after emerging from the difficulties in which he had been placed by his political struggle with John of Gaunt, was to make Brocas 'chief surveyor and sovereign warden of our parks . . . throughout our bishopric.' Soon after this he became the chief trustee of the Brocas estates.

Immediately after the death of Edward III, Brocas was appointed captain of Calais, an appointment which he held only for a short time, but he was now constantly employed in various diplomatic and military services. He also sat for Wiltshire in one parliament (1391) and for Hampshire in ten (between 1367 and 1395), closely connected with Wykeham in his political line of conduct. On or soon after Richard's marriage with Anne of Bohemia, he became the queen's chamberlain, and he is said to have also been chamberlain to the Comte de Hainault.

Brocas was thrice married: (1) About 1354, to Agnes, daughter and heiress of Sir Mauger Vavasour of Denton, Yorkshire, from whom he was divorced. (2) In 1361, to Mary des Roches, daughter and heiress of Sir John des Roches, and collaterally descended from Peter de Rupibus, bishop of Winchester. This lady was the widow of Sir John de Borhunte, knight. With her Brocas received several estates, amongst others Roche Court, near Fareham, Hampshire, which has continued ever since in possession of his lineal descendants and representatives. Through this second marriage Sir Bernard became master of the royal buckhounds, an hereditary office retained by his descendants for three centuries. (3) To Katharine, widow of Sir Hugh Tyrrell, in 1382, soon after which he parted with some of his estates to the priory of Southwick, and others to the parish church of Clewer, where he founded the Brocas chantry.

Before his second marriage Brocas came, through the agency of his uncle, Bernard Brocas, rector of Guildford, into possession of the estate which formed his chief property, Beaurepaire, near Basingstoke. Here he built a house, which has long ago been pulled down. Brasses and monuments of the Brocas family are still to be seen in the neighbouring churches of Sherborne St. John and Bramley. Brocas died in 1395, and was buried in St. Edmund's Chapel in Westminster Abbey. That his handsome monument stands so close to the royal tombs is a mark of the estimation in which he was held by his master. The inscription on the tomb runs thus: 'Hic jacet Bernardus Brocas miles T. T. quondam camerarius Anne Regine Anglie cujus anime propitietur Deus.' The recumbent figure is apparently of a much later date, but certainly antecedent to the time of Addison, who, in the 'Spectator,' describes the verger of the abbey as pointing out to Sir Roger de Coverley 'the old lord who cut off the King of Morocco's head,' a story which deeply impressed Sir Roger. The remark was occasioned by the crest, which represents what is heraldically called 'a Moor's head orientally crowned.' This crest is found on the seals of Sir Bernard Brocas, along with the lion rampant of the Brocas arms, as early as 1361. He was the first to use it, and it has been borne by his descendants ever since, but its origin is not known. It was, of course, granted by Edward III, and probably represented some

feat of war or chivalry. It may be remarked that the features of the 'Moor' are represented in all the seals as of the distinct, and even exaggerated, negro type.

The son of Brocas by his second wife, of the same name as himself, who also held office at Richard's court, was executed in 1400 by Henry IV for his share in the conspiracy formed in favour of his dethroned master. Shakespeare mentions him in his 'Richard II' as one of the conspirators—

> My lord, I have from Oxford sent to London
> The heads of Brocas and Sir Bennet Seely,
> Two of the dangerous consorted traitors
> That sought at Oxford thy dire overthrow.

In some of these details the poet was misled by his authorities. The 'Brocas' at Eton and 'Brocas Street' in Windsor take their name from this family, to whom considerable portions of Eton and Windsor once belonged.

[Family papers; Gascon Rolls; Record Office papers; The Family of Brocas, of Beaurepaire and Roche Court, Hereditary Masters of the Royal Buckhounds, with some hints towards a history of the English Government of Aquitaine, by Montagu Burrows, Capt. R.N., F.S.A., Chichele Professor of Modern History.] M. B.

BROCHMAEL, YSGYTHRAWG (*fl.* 584), king of Powis, is mentioned in Llywarch Hen's elegy (trip. 37), a poem which Dr. Guest (*Origines Celticæ*, ii. 289) has referred to the overthrow of Uriconium and the desolation of the Severn Valley by Ceawlin, king of the West Saxons in 584. The country of Kyndylan, the chief whose death Llywarch Hen bewails, is there called the land of Brochmael, and it is probable, therefore, that Brochmael was lord of that part of Britain, and that it was under his command that the Welsh (Britons) checked Ceawlin's career of conquest at Fethan-leag or Faddiley. When in 613 (*Annales Cambriæ*; *A.-S. Chron.* 607) Æthelfrith of Northumbria overthrew the Welsh at the battle of Chester, Bæda says that the monks of Bangor who had come to pray for the success of their countrymen were under the care of Brochmael, who stayed with them while the battle was fought, and who left them and fled when the victorious Æthelfrith attacked them. In this battle Selim, the son of Cynan, was slain, and as Cynan is said to have been the son of Brochmael, it is evident that he must have been an old man at the time, and 'therefore may very well have been king of Powis when Ceawlin [q. v.] attacked Uriconium' (Guest).

[Guest's Origines Celticæ, ii. 299, 308, 326; Annales Cambriæ an. 613, Rolls Ser.; Bæda, Hist. Eccl. ii. 2 (Eng. Hist. Soc.); Anglo-Saxon Chron. an. 584, 607, Rolls Ser.] W. H.

BROCK, DANIEL DE LISLE (1762–1842), bailiff of Guernsey from 1821 to 1842, belonged to an English family established in Guernsey as early as the sixteenth century. His father, John Brock of St. Peter's, who had been a midshipman in the royal navy, married Elizabeth de Lisle, daughter of the then lieutenant-bailiff of the island, and by her had fourteen children, ten of whom attained maturity. John Brock died in 1777, at the age of 48. Daniel de Lisle, his third son, was born in Guernsey on 10 Dec. 1762. After such schooling as the island afforded in those days, he was placed at Alderney under the tuition of M. Vallat, a Swiss pastor, afterwards rector of St. Peter-in-the-Wood, Guernsey, and subsequently at a school at Richmond, Surrey. He was, however, taken away at the age of fourteen to accompany his father, who was in failing health, to France, where the latter died at Dinan. He spent about twelve months in visiting the Mediterranean, Switzerland, and France, in 1785–6, and twelve years later, in 1798, was elected a jurat of the royal court of Guernsey, from which time his name is intimately associated with the history of his native place. On four separate occasions, between 1804 and 1810, he was deputed by the states and royal court of Guernsey to represent them in London, in respect of certain measures affecting the trade and ancient privileges of the island. In 1821 he was appointed bailiff, or chief magistrate, of the island, and soon after was again despatched to London, to protest, which he did with success, against the extension to Guernsey of the new law prohibiting the import of corn until the price should reach 80*s.* a quarter. In 1832, when the right of the inhabitants to be tried in their own courts was menaced by a proposed extension of the power of writs of *habeas corpus* to the island, Brock and Mr. Charles de Jersey, king's procureur, were sent to London to oppose the measure, and did so with success. Three years later Brock was once more despatched to London at the head of a deputation to protest against the proposed deprivation of the Channel Islands of their right of exporting corn into England free of duty. Owing to the remonstrance of the deputation, a select committee of the House of Commons was appointed to inquire into the subject, and the bill was subsequently withdrawn. On this occasion the states of Jersey presented Brock with a service of plate valued at 100*l.*, and his portrait was placed in the royal court-house of Guernsey. Brock was married and had two children: a son, who became a captain in the 20th foot, and a daughter. He died in Guernsey on 24 Sept.

1842. A public funeral was accorded to his remains, in recognition of his long and valued services to his native island.

[Tupper's Life of Sir Isaac Brock (2nd ed. London, 1847), appendix B; Jacob's Annals of the Bailiwick of Guernsey (Paris, 1830), part i.] H. M. C.

BROCK, Sir ISAAC (1769–1812), major-general, commanding in Upper Canada in 1812, was the eighth son of John Brock of Guernsey [see Brock, Daniel de Lisle], and was born in Guernsey 6 Oct. 1769. He is described by his nephew and biographer, F. B. Tupper, as having been, like his brothers, a tall, robust, precocious boy, the best boxer, and strongest, boldest swimmer among his companions, but noted withal for his gentleness of disposition. He was sent to school at Southampton at the age of ten, and was afterwards under the tuition of a French pastor at Rotterdam. On 2 March 1785, when a little over fifteen, he entered the army by purchase, as an ensign in the 8th (King's), in which regiment his elder brother, John Brock (who was killed in a duel at Cape Town when a captain and brevet lieutenant-colonel in the 81st foot in 1801), had just purchased a company, after ten years' service in the corps in America and elsewhere. Isaac Brock purchased a lieutenancy in the 8th (King's) in 1790, and shortly after, having raised men for an independent company, was gazetted captain and placed on half pay. Paying the difference, he exchanged into the 49th foot in 1791, and served with that regiment in Jamaica and Barbadoes until 1793, when he returned on sick leave, and was employed on the recruiting service until the regiment returned home. He purchased a majority in the 49th in 1795, and a lieutenant-colonelcy on 25 Oct. 1797, becoming soon afterwards senior lieutenant-colonel with less than thirteen years' total service, which, as Brock had no Horse Guards interest, was regarded at the time as a case of exceptionally rapid promotion. The regiment had returned home in very bad order, symptoms of which were manifest when it was stationed near the Thames during the mutiny at the Nore, but it soon improved under its new commander so as to elicit the warm approbation of the Duke of York. Under Brock's command the regiment served with General Moore's division in the expedition to North Holland in 1799, where it was greatly distinguished at the battle of Egmont-op-Zee, and likewise on board the fleet under Sir Hyde Parker and Lord Nelson at the battle of Copenhagen and in the operations in the Baltic in 1801, a narrative of which, by Brigadier-general W. Stewart, commanding the line troops embarked, is given in 'Nelson Desp.' iv. 299. Brock embarked with the regiment for Canada in 1802, and in the following year, single-handed, suppressed a dangerous conspiracy which had been instigated by deserters in a detachment at Fort George, and the ringleaders of which were executed at Quebec on 2 March 1804. He returned home on leave in 1805, but, war with the United States appearing imminent, he rejoined at his own request early in 1806. After commanding for some time at Quebec, he was sent in 1810 to Upper Canada, to assume command of the troops there, with which he subsequently combined the duties of civil administrator as provisional lieutenant-governor of the province. Here his energetic example, the confidence reposed in him by the inhabitants, and the ascendency he possessed over the Indian tribes, at that time under the leadership of the famous Shawnee warrior Tecumseh, proved of the highest value. Very full details of his civil and military services at this period will be found in 'Life and Correspondence of Sir Isaac Brock' (London and Guernsey, 8vo), written by his nephew Ferd. Brock Tupper, the first edition of which appeared in 1845, and a second, much enlarged from family manuscript sources, in 1847. Previous to a declaration of hostilities an army of 2,000 American militia, with twenty-five guns, had been despatched from Ohio into Michigan, under the veteran general Hull, who was invested with discretionary powers as to the invasion of Canada. Hull issued a bombastic proclamation, and on 12 July 1812 crossed the narrow channel between Huron and Erie and entered Upper Canada. Subsequently he withdrew again to his own shore and shut himself up in Detroit, whither Brock, who had only 1,450 men to defend a thousand miles of frontier, followed him with his available forces, consisting of 350 regulars, 600 Indian militia, and 400 untrained volunteers, to which Hull's forces surrendered on 16 Aug. 1812. For the judgment, skill, and courage displayed by him at this juncture, Brock, who had attained the rank of major-general on 4 June 1811, was made an extra knight of the Bath on 10 Oct. 1812. Meanwhile a second American army of 6,000 men, under Major-general Van Rensselaer, had been concentrated on the Niagara frontier. During an attack by part of this force on the village of Queenstown, held by the flank companies 49th and the York volunteer militia, on the morning of 13 Oct. 1812, Sir Isaac Brock received his death-wound. He had dismounted to head the 49th, when he was shot through

the body and fell beside the road leading from Queenstown to the heights, expiring soon after. His last words, it is said, were, 'Never mind me—push on the York volunteers.' A second action took place at Queenstown the same day, after Major-general Roger Sheaffe had come up with the 41st foot and other reinforcements, when the American brigadier Wadsworth with 950 men laid down their arms. After lying in state at Government House, Brock's remains were interred in one of the bastions of Fort George beside those of Lieutenant-colonel McDonell, Canadian militia, a young man of twenty-five, attorney-general of the Upper Province, who had accompanied Brock in the capacity of militia aide-de-camp and had been mortally wounded the same day. Brock was in his forty-fourth year, and unmarried. He was six feet two inches in height, very erect and athletic, but latterly very stout. He had a pleasant manner and a frank open countenance, bespeaking the modest kindly disposition of one who had never been heard to utter an ill-natured remark, and in whom dislike of ostentation was as characteristic as quickness of decision and firmness in peril. After his death the officers of the 49th placed a handsome sum in the hands of the regimental agent for the purpose of procuring a portrait of the general for the mess, but on reference to the family it was found that no good likeness was extant. It may be added that the whole of the regimental records of the 49th were destroyed, after Brock's death, at the evacuation of Fort George in 1813. The House of Commons voted 1,575*l.* for a public monument, which was erected by Westmacott, and placed in the south transept of St. Paul's. Pensions of 200*l.* each were awarded to the four surviving brothers of the general, together with a grant of land in Upper Canada. On 13 Oct. 1824, the twelfth anniversary of his fall, the remains of Brock and his brave companion McDonell were carried in state from Fort George to a vault beneath a monument on Queenstown heights, erected at a cost of 3,000*l.* currency, voted by the Provincial Legislature. This monument, an Etruscan column, with winding stair within, standing on a rustic pediment, was blown up by an Irish American on Good Friday, 1840. The ruin was seen and described by Charles Dickens (*American Notes*, ii. 187–8). On 30 July 1841 a mass meeting was held in the open air beside the ruin, the lieutenant-governor of Upper Canada, Sir George Arthur, presiding, which was attended by over eight thousand persons, besides representatives of the Indian tribes of the six nations, at which it was enthusiastically resolved to restore the monument forthwith at public cost. A sum of 5,000*l.* currency was voted for the purpose by the province, and the work at once commenced. Copies on vellum of the correspondence, addresses, &c., relating to the restoration are in the British Museum Library. The monument thus restored is in the shape of a tall column standing on the original site on the heights above Queenstown, and surmounted by a statue of the general. It is enclosed within forty acres of ornamental grounds, with entrance gates bearing the Brock arms. Below, in the village of Queenstown (or Queenston, as it is now written), is a memorial church with a stained window, placed there by the York rifles, the corps to which Brock's last order was given. Brockville and other names in Canadian topography also perpetuate the memory of the 'Hero of Upper Canada.'

BROCK, WILLIAM, D.D. (1807–1875), dissenting divine, was born at Honiton on 14 Feb. 1807. His father, a man of earnest and religious spirit, whose efforts among the poor were at one time wrongly suspected of insidious political design, married in 1806 Ann Alsop, a descendant of Vincent Alsop [q. v.], ejected for nonconformity in 1662. William, their eldest child, was educated first at Culmstock and afterwards at the grammar school of Honiton. At the age of eight we find him writing to a friend to procure him copies of 'Cæsar' and of 'Virgil.' His life at school was one of considerable hardship, inequality of rank subjecting him to the persecution of his schoolfellows.

Leaving Honiton, he was placed for some time under the charge of the Rev. Charles Sharp at Bradninch; in 1820, being then thirteen years of age, was apprenticed to a watchmaker at Sidmouth; on the conclusion of his period of 'stern servitude' was removed to Hertford; afterwards joined a baptist church at Highgate; studied subsequently for four sessions at Stepney College; and settled at Norwich in 1833. In the following year he married Mary Bliss of Shortwood, Gloucestershire. During his stay at Norwich

Brock published, through the Religious Tract Society, a work entitled 'Fraternal Appeals to Young Men.' In 1834 Brock threw himself with great energy into the final struggle connected with the abolition of West Indian slavery; spoke in every town in Norfolk and most of those in Suffolk; drew up papers in support of his views, and contributed articles to the public journals. It is stated that Brock was the first publicly to attack the inveterate custom of political bribery in Norwich.

In 1846, chiefly on account of failing health, Brock made a tour through France and Italy. In 1847 he suffered from defective sight, for the treatment of which he temporarily removed to London. At the election for Norwich in 1847 he opposed his intimate friend Sir Morton Peto, and supported Mr. Serjeant Parry, the candidate who favoured the separation of church and state. In consequence of enfeebled health Brock was ultimately advised to remove to London, where he became pastor of Bloomsbury Chapel on 5 Dec. 1848. Brock soon set on foot a philanthropic enterprise for the reclamation of the poor in the squalid and crowded district of St. Giles.

At Exeter Hall Brock lectured on behalf of the Young Men's Christian Association on 'Mercantile Morality.' He was personally acquainted with Sir Henry Havelock; and after the death of Havelock, in 1857, he published a memoir, which had an immense circulation, forty-five thousand copies being speedily disposed of in England. In 1859 the work of preaching in theatres on Sundays was instituted in London, and Brock delivered the first sermon in the Britannia Theatre, Hoxton.

In 1866 Brock made a tour in the United States. On his return he entered into the ritualistic controversy, and published two discourses under the title of 'Ritualism Mischievous in its Design.' He further drew up a series of resolutions, in a similar sense, in behalf of the 'general body of protestant dissenting ministers of the three denominations in and about London.' He helped at this time to form the London Association of Baptist Churches, and was elected its first president. In the course of twelve years the association included 140 churches, with nearly 34,000 members in communion. In 1869 Brock was elected to the presidency of the Baptist Union of Great Britain and Ireland. In September 1872 he resigned the post of minister at Bloomsbury Chapel. A few days before preaching his farewell sermon he lost his wife. After three years spent in comparative retirement he died on 13 Nov. 1875. In 1860 the senate of Harvard College conferred upon him the honorary degree of doctor of divinity.

In addition to the publications named in this article, Brock was the author (*inter alia*) of 'Sacramental Religion,' published in 1850; 'Sermons on the Sabbath,' 1853; 'The Gospel for the People,' 1859; 'The Wrong and Right of Christian Baptism,' 1864; 'The Christian's Duty in the forthcoming General Election,' 1868; and 'Midsummer Morning Sermons,' 1872.

[Birrell's Life of William Brock, D.D., 1878; M'Cree's William Brock, D.D., first Pastor of Bloomsbury Chapel, 1876; A Biographical Sketch of Sir Henry Havelock, K.C.B. (1858), and other works by Brock; Annual Register for 1875.]

G. B. S.

BROCK, WILLIAM JOHN (1817?–1863), religious writer, born about 1817, married about 1845, in 1847 brought out a small volume of poems, 'Wayside Verses,' dating the preface London, 22 Sept.; and obtaining after this the degree of B.A., he took orders, and entered the church as curate of St. George's, Barnsley, Yorkshire (*Twenty-seven Sermons*, 2nd ed. p. 314). In 1855 he published at Barnsley, and by subscription, 'Twenty-seven Sermons,' in one volume, a publication which was quickly out of print (preface to 2nd ed.); and leaving Barnsley in 1858 to become incumbent of Hayfield, Derbyshire, Brock brought out a second edition of this book, dating it Hayfield Parsonage, 22 Sept. 1858, and adding to it the farewell sermon he had preached on leaving Barnsley. He died at Hayfield on 27 April 1863, and was buried there. After his death were published 'The Rough Wind stayed,' a volume of 'The Library of Excellent Literature,' 1867, and 'The Bright Light in the Clouds,' 1870.

[Brock's Wayside Verses, pp. 50, 76, 131; private information.]

J. H.

BROCKEDON, WILLIAM (1787–1854), painter, author, and inventor, was born at Totnes on 13 Oct. 1787. His father, who was a watchmaker, was a native of Kingsbridge, where and in the adjoining parish of Dodbrook his family had been occupants or owners of garden mills since the reign of Henry IV. This son, who was an only child, was educated at a private school in Totnes, but he learned little in it. His father was quite capable of supplying the deficiencies of school teaching as then understood, and under his instructions his son acquired a taste for scientific and mechanical pursuits. So great was his proficiency in mechanics that he was able to conduct the business during the illness of

nearly twelve months which ended in his father's death in September 1802.

Brockedon was proud to acknowledge his obligations to his father, whose 'natural talents,' as he wrote to a friend in 1832, he had 'never seen surpassed,' adding that 'whatever turn my own character may have taken, if the world thinks kindly of it, it grew under his instruction and advice, and the impressions made upon me before I was fifteen.'

After his father's death, Brockedon spent six months in London in the house of a watch manufacturer, to perfect himself in what he expected to have been his pursuit in life. On his return to Totnes he continued to carry on the business for his mother for five years. In a letter written to his friend, Octavian Blewitt, in November 1832, he says: 'I recollect with much pleasure the hand I had in making the present parish clock in the church at Totnes. An order was given to my father to make a new church clock a short time before the accident by lightning which, in February 1799, struck the tower, threw down the south-east pinnacle, and did so much damage to the church as to require nearly three years to repair it. This accident prevented the clock being put up until the summer of 1802, during my father's last illness. . . . I remember when the clock was making that I was set to do some of the work, though only about thirteen years of age, particularly cutting the fly-pinion out of the solid steel.'

During the five years in which he carried on the watchmaking business for his mother he devoted his spare time to drawing, for which from childhood he had as great a taste as he had for mechanics. Archdeacon (then the Rev. R. H.) Froude, rector of Dartington (father of Mr. J. A. Froude), encouraged him to pursue painting as a profession. The archdeacon liberally aided Brockedon's journey to London and his establishment there during his studies at the Royal Academy. Brockedon found another generous patron in Mr. A. H. Holdsworth, M.P. for Dartmouth, and governor of Dartmouth Castle.

This was in February 1809. From that time his career must be considered under three heads: 1, as a painter; 2, as an author; 3, as an inventor.

1. For six years he pursued his studies in London as a painter with little interruption till 1815. In that year, immediately after the battle of Waterloo, he went to Belgium and France, and had the benefit and gratification of seeing the gallery of the Louvre before its dispersion. From 1812 to 1837 he was a regular contributor to the exhibitions of the Royal Academy and the British Institution. In these twenty-five years he exhibited sixty-five works, historical, landscape, and portraits—thirty-six at the Academy and twenty-nine at the British Institution (Graves, *Dict. of Artists*). The works he exhibited in 1812 were portraits of Governor Holdsworth, M.P., and of Samuel Prout, who was, like himself, a Devonshire artist. He next exhibited 'a more ambitious work, of which artists of name spoke with approbation,' a portrait of 'Miss S. Booth as Juliet' (Cunningham, 'Town and Table Talk,' *Illustr. News*, 1854), pictures on scriptural and other subjects, portraits of Sir Alexander Burns, Sir George Back, now in the library of the Royal Geographical Society, and some interesting landscapes of Alpine and Italian scenery. He also painted the 'Acquittal of Susannah,' presented by him to his native county and now in the Crown Court of the Castle of Exeter; 'Christ raising the Widow's Son at Nain,' which he presented to Dartmouth church as a mark of respect to Governor Holdsworth, and which obtained for him the prize of one hundred guineas from the directors of the British Institution; and, about the same time, 'Christ's Agony in the Garden,' which he presented to Dartington church, a picture, he says in a letter to Blewitt, 'associated with my grateful recollections of Mr. Froude's friendship; and I mention it, trifling as it is, as one public testimonial of my desire to acknowledge his exceeding kindness to me.' Another large picture, representing the 'Delivery of the Tables of the Law to Moses on Mount Sinai,' was presented by him to Christ's Hospital in 1835, and placed by order of the governors in their great hall. Another picture, painted at Rome in 1821, the 'Vision of the Chariots to the Prophet Zechariah,' excited so much interest that, by permission of the pope (Pius VII), it was exhibited in the Pantheon. At the same time Brockedon was elected a member of the Academies of Rome and Florence. In compliance with a law of the Florentine Academy he presented it with his portrait painted by his own hand. Brockedon's portrait is now a conspicuous object in the Uffizi of the Florence Gallery near those of Reynolds and Northcote.

2. Brockedon was meanwhile earning for himself a reputation as an author. In 1824 he made an excursion to the Alps for the purpose of investigating the route of Hannibal, and the idea of publishing 'Illustrations of the Passes' occurred to him. During the summers of 1825, 1826, 1828, and 1829, he was led in the course of his journeys to cross

the Alps fifty-eight times, and to pass into and out of Italy by more than forty different routes. The result was the publication, in 1827, of the first part of his 'Illustrations of the Passes of the Alps by which Italy communicates with France, Switzerland, and Germany.' The work, containing 109 engravings, was issued in twelve parts, from 1827 to 1829, forming when complete two royal quarto volumes, and was gratefully dedicated to his earliest patron, Archdeacon Froude. The drawings, which were entirely by Brockedon's own hand, were done in sepia, and were sold in 1837 to the fifth Lord Vernon for 500 guineas.

In 1833 he published in one volume his 'Journals of Excursions in the Alps, the Pennine, Graian, Cottian, Rhetian, Lepontine, and Bernese.' He also edited Finden's 'Illustrations to the Life and Works of Lord Byron.' In 1835 he edited for the Findens the 'Illustrated Road Book from London to Naples,' with thirty illustrations by himself and his friends Prout and Stanfield. In 1836 he wrote for 'Blackwood's Magazine' 'Extracts from the Journal of an Alpine Traveller,' and he subsequently wrote the Savoy and Alpine parts of Murray's 'Handbook for Switzerland.' His next work, published in folio in 1842-4, was 'Italy, Classical, Historical, and Picturesque, illustrated and described,' with sixty engravings from drawings by himself, Eastlake, Prout, Roberts, Stanfield, Harding, and other friends. In 1855, in conjunction with Dr. Croly, he wrote part of the letterpress of David Roberts's 'Views in the Holy Land, Syria, &c.,' Croly writing the historical, and Brockedon the descriptive portions.

3. During all these years Brockedon's love of art and literature was divided with his love of mechanical and scientific pursuits. As far back as 1819 his taste for mechanics led him to turn attention to the mode of wire-drawing then in use. Brockedon invented a mode of drawing the wire through holes pierced in sapphires, rubies, and other gems. He patented this invention, and visited Paris in connection with it; but, from the facility of violation, it was not a source of profit, though now the mode universally adopted. In 1831 he invented and patented, in conjunction with the late Mr. Mordan, a pen of a novel form called the 'oblique,' from the slit being in the usual direction of the writing. He next turned his attention to the preparation of a substitute for corks and bungs by coating felt with vulcanised india-rubber. He took out a patent for this invention in 1838, and in 1840 and 1842 enlarged its scope by other patents for retaining fluids in bottles, and for the manufacture of fibrous materials for the cores of stoppers. This invention led to his forming business relations with Messrs. Charles Macintosh & Co. of Manchester. About the year 1841 he submitted to them his patents for a substitute for corks, through which he was interested in their business till 1845, when he became a partner, and retained that position till his death. In 1843 he patented an invention for the manufacture of wadding for firearms; another for condensing the carbonates of soda, potass, &c., into the solid form of pills and lozenges; and for preparing or treating plumbago by reducing common black lead to powder, and then compressing it *in vacuo*, so as to produce artificial plumbago for lead pencils purer than any that could then be obtained, in consequence of the exhaustion of the mines in Cumberland, and especially valuable to artists because free from (diamond) grit. The invention was first worked for him by Messrs. Mordan & Co., but at his death in 1854 the plant and machinery were sold by auction, and bought by one of the merchants connected with the lead industry at Keswick. In 1844, 1846, and 1851, he patented inventions for various applications of vulcanised india-rubber. In 1830 Brockedon took an active part in the formation of the Royal Geographical Society, and was elected a member of its first council. He was afterwards the founder of the Graphic, an art society. On 12 June 1830 he was elected a member of the Athenæum. It had been resolved to commemorate the opening of the new club house in Pall Mall by adding 200 members to the list, 100 being elected by the committee, and 100 by the club. Brockedon was one of the hundred elected by the committee. On 18 Dec. 1834 he was elected a fellow of the Royal Society. In February 1837 he lost his mother, for whose happiness he made the most loving provision from the moment when his improved prospects enabled him to do so.

He married in 1821 Miss Elizabeth Graham, who died in childbirth on 23 July 1829, in her fortieth year, leaving two children, Philip North, born at Florence on 27 April 1822, and Mary, married to Mr. Joseph H. Baxendale, the head of the firm of Pickford & Co. The son, who was educated as a civil engineer, became the favourite and confidential pupil of Mr. Brunel, and gave the brightest promise of future eminence in his profession, but was carried off by consumption at the early age of twenty-eight, on 13 Nov. 1849. On 8 May 1839 Brockedon married, as his second wife, the widow of Captain Farwell of Totnes, who survived him, and by whom he had no issue.

Brockedon never recovered from the shock of his son's death; his health and spirits declined visibly. For several years he had been a sufferer from gall-stones, and in July 1854 a succession of paroxysms of unusual severity ended in an attack of jaundice, under which he rapidly sank. He died on 29 Aug. 1854, in his sixty-sixth year, at 29 Devonshire Street, Queen Square, Bloomsbury, and was buried in the grave which contained the remains of his first wife and his son in the burial-ground of St. George the Martyr, in Hunter Street, Brunswick Square.

Mr. Peter Cunningham, in announcing his death in the 'Town and Table Talk' of the 'Illustrated London News,' said that 'English artists were mourning the loss of an old friend.' There were few of whom this could have been said with more perfect truth, for it would have been difficult to find any one who was more beloved by a large circle of friends at home and abroad, or who was more regretted by his professional contemporaries, many of whom had reason to cherish his memory with affection as that of a man ever ready to show kindness to others, and never likely to forget it when shown to himself.

[MS. Letters, Brockedon and A. H. Holdsworth, M.P., to Octavian Blewitt, 1832–7, quoted by W. Pengelly, F.R.S., in Trans. Devon Assoc. of Literature, Science, and Art, 1831, p. 25; Blewitt's Panorama of Torquay, a Descriptive and Historical Sketch of the District comprised between the Dart and the Teign, Lond. 1832, p. 271; Cunningham's Town and Table Talk in Illustr. Lond. News, 2 Sept. 1854; Bryan's Dict. of Painters and Engravers, edited by R. E. Graves; Algernon Graves's Dict. of Artists who have exhibited in the principal London Exhibitions of Oil Paintings, 1884; Bennett Woodcraft's Alphabetical Index of Patentees of Inventions, &c., 1854.] O. B–t.

BROCKETT, JOHN TROTTER (1788–1842), antiquary, was born at Witton Gilbert, co. Durham. In his early youth his parents removed to Gateshead, and he was educated under the care of the Rev. William Turner of Newcastle. The law having been selected as his profession, he was, after the usual course of study, admitted an attorney, and practised for many years at Newcastle, where he was esteemed an able and eloquent advocate in the mayor's and sheriff's courts, and a sound lawyer in the branches of his profession which deal with tenures and conveyancing.

He was a man of refined tastes, and a close student of numismatics and of English antiquities and philology. He made considerable collections of books and coins and medals, and in 1823–4 the choice library and cabinets which he had formed up to that time were dispersed by auction at Sotheby's, the sale of the latter occupying ten days, and that of the former fourteen days.

In 1818 he published 'Hints on the Propriety of establishing a Typographical Society in Newcastle' (8vo, pp. 8), which led to the foundation of such a society, and gave an impulse to the production of an interesting series of privately printed tracts at Newcastle. To that series he himself contributed several tractates, including, 1. 'A Catalogue of Books and Tracts printed at the private press of George Allan, Esq., at Darlington,' 1818. 2. 'Bartlet's Episcopal Coins of Durham,' &c., new edition by J. T. B., 1817. 3. 'Beauvais' Essay on the means of distinguishing Antique from Counterfeit Coins and Medals,' translated and edited by J. T. B., 1819. 4. 'Selecta Numismata Aurea Imperatorum Romanorum e Museo J. T. B.,' 1822. Also reprints of tracts on Henry III, on Robert, earl of Salisbury, and of three accounts of the siege of Newcastle.

In 1818 he published an 'Enquiry into the Question whether the Freeholders of the Town and County of Newcastle-upon-Tyne are entitled to vote for Members of Parliament for the County of Northumberland,' and in 1825 the first edition of his 'Glossary of North Country Words in Use' (Newcastle-on-Tyne, 8vo). The manuscript collections for this valuable work were not originally intended for publication, and they passed into the library of Mr. John George Lambton, afterwards Lord Durham, but that gentleman surrendered them for the public service. A second edition, to a large extent rewritten, was published in 1829; and a third was in preparation at the time of the author's death, and was published, under the editorship of W. E. Brockett, in 1846 (2 vols. 8vo). He also contributed papers to the first three volumes of 'Archæologia Æliana.' In 1882 a 'Glossographia Anglicana,' from a manuscript left by Brockett, was privately printed by the society, called 'The sette of odd volumes,' with a biographical sketch of the author by Frederick B. Coomer of Newcastle, who names one or two tracts by Brockett not noted above, and memoirs by him of Thomas and John Bewick, prefixed to the 1820 edition of Bewick's 'Select Fables.'

Brockett was a member of the Society of Antiquaries, a secretary of the Newcastle Literary and Philosophical Society, and one of the council of the Society of Antiquaries of Newcastle-on-Tyne. He died at Albion Place, Newcastle, on 12 Oct. 1842, aged 54.

[Gent. Mag. 1842, part ii. p. 664; English Dialect Society's Bibliographical List; Martin's Cat. of Privately Printed Books, 1835, 430–440; T. F. Dibdin's Bibliog. Tour, i. 390.]

C. W. S.

BROCKIE, MARIANUS, D.D. (1687–1755), Benedictine monk, was born at Edinburgh on 2 Dec. 1687, and joined the Scotch Benedictines at Ratisbon in 1708. He was doctor and professor of philosophy and divinity, and for a considerable time superior of the Scotch monastery at Erfurt. In 1727 he was sent on the catholic mission to his native country, where he remained till 1739. After returning to Ratisbon, he was for many years prior of St. James's, during which time he wrote his 'Monasticon Scoticon.' He died, leaving it unfinished, on 2 Dec. 1755. It was completed by Maurice Grant, but the monastery was not able to publish it. The manuscript, bound in seven ponderous volumes, is preserved at St. Mary's College, Blairs. It was lent to Dr. James F. S. Gordon for consultation and use in his 'Monasticum,' printed at Glasgow in 1867. Brockie wrote 'Observationes critico-historicæ' on the 'Regulæ ac Statuta recentiorum Ordinum et Congregationum' which constitute the 3rd, 4th, 5th, and 6th volumes of Holstenius's 'Codex Regularum Monasticarum et Canonicarum,' printed at Augsburg in 1759.

T. C.

BROCKLESBY, RICHARD (1636–1714), non-abjuring clergyman, was born at Tealby, near Market Rasen, Lincolnshire, in 1636. His father was George Brocklesby, gentleman. He was educated at the neighbouring grammar school of Caistor, and as a sizar at Sidney Sussex College, Cambridge. He graduated B.A. in 1657 and M.A. in 1660. Some time between 1662 and 1674 he was instituted to the rectory of Folkingham, Lincolnshire. In the appendix to Kettlewell's Life, 1718, p. xxj, he is recorded as 'Mr. Brokesby, Rector of Folkinton.' No sympathy with the Jacobite party is to be inferred from his declining to abjure. Brocklesby retired to Stamford, and employed his leisure in composing an opus magnum, entitled 'An Explication of the Gospel Theism and the Divinity of the Christian Religion. Containing the True Account of the System of the Universe, and of the Christian Trinity. . . . By Richard Brocklesby, a Christian Trinitarian,' 1706, fol., pp. 1065. The preface truly says it is 'a book of many and great singularities;' it is crammed with reading from sages, fathers, schoolmen, travellers, and poets; it bristles with odd terminology of the writer's special coinage. Brocklesby denies the eternal generation of the Son, and even his pre-existence; yet asserts his consubstantiality as God-man begotten of God, 'an humane-divine person' (see especially bk. vi., 'The Idea of the Lord the Son'). He places the abode of Christ in heaven, from his coming of age to his public mission (p. 1019 sq.), though he calls the kindred notion of Socinus 'wild and pedantic.' The only Socinian writers whom he directly quotes are Enyedi, Krell, and the English 'Unitarian Tracts.' Nor does he know Servetus (p. 158) at first hand. Acontius (pp. 819, 821) he greatly values. Spinoza (p. 785) he cites with modified approval. John Maxwell, prebendary of Connor, issued in 1727, 4to, an English version ('A Treatise of the Laws of Nature') of Bishop Richard Cumberland's 'De Legibus Naturæ,' 1672, 4to. Out of Brocklesby's book, as he owns on his title-page, Maxwell carved two introductory essays and a supplementary dissertation. He simplifies Brocklesby's style, omits his theology, and adds some new matter from other sources. Brocklesby died at Stamford in 1714 (probably in February), and was buried at Folkingham. His will (dated 3 Aug. 1713, codicils 30 Jan. and 7 Feb. 1714, proved 13 Aug. 1714) was to have been included in the second volume of Peck's 'Desiderata Curiosa,' 1735, but was left over to a third volume, which never appeared. Out of considerable landed property in Lincolnshire and Huntingdonshire, a house at Stamford, &c., Brocklesby founded schools at Folkingham and Kirkby-on-Bain, Lincolnshire, and Pidley, Huntingdonshire, to teach poor children their catechism and to read the Bible. The charitable bequests are very numerous, and some rather singular. A complicated scheme for the distribution of bibles in five counties was to come into effect 'if the propagation of the gospel in the Eastern parts totally faileth, or doth not considerably succeed and prosper.' A sum of 150*l.* is left towards rebuilding the parish church of Wilsthorpe, Lincolnshire; 150*l.* each for the benefit of the communities of French and Dutch refugees; and 10*l.* each to eight presbyterian ministers. A bequest of 10*l.* to the celebrated Whiston was revoked by the first codicil. Brocklesby left two libraries. That at Stamford was sold by auction; the catalogue, Stamford, 1714, 4to, contains the titles of many rare volumes of the Socinian school. His library in London was left to be disposed of at the discretion of John

Heptinstall, his printer, and William Turner, schoolmaster of Stamford.

BROCKLESBY, RICHARD (1722–1797), physician, was born at Minehead in Somersetshire, and was the only son of Richard Brocklesby of Cork. His mother was Mary Alloway of Minehead, and both families belonged to the Society of Friends. On 29 March 1734 Brocklesby entered the school of Abraham Shackleton, at Ballitore, co. Kildare, so that he was one of the senior boys when Burke went there in May 1741. They were contemporaries at school for less than a year, but this early acquaintance was continued when both came to live in London, and they were friends throughout life. After some studies at Edinburgh, in 1742 Brocklesby went to Leyden and graduated M.D. there on 28 June 1745. His graduation thesis on this occasion (*Dissertatio Medica inauguralis de Saliva sana et morbosa*, 4to, Leyden, 1745) seems to have been suggested by a case which he had seen at Edinburgh, in which the administration of five grains of mercury was followed by the secretion of one hundred pounds of saliva. He describes clearly the expectoration of pneumonia and that of hydrophobia, and throughout the essay shows extensive reading and a power of lively expression. He attacks Pitcairn and the iatromechanicians in general, and speaks with gratitude of his own teacher Gaubius. During the next twelve months Brocklesby settled in London, and in 1751 became a licentiate of the College of Physicians. In 1754 he received a degree from the university of Dublin, and was incorporated M.D. at Cambridge in the same year. His election as a fellow of the College of Physicians followed in 1756 (Munk, *Coll. of Phys.* ii. 202). In 1758 he was appointed physician to the army, and served in Germany. In 1763 he settled in Norfolk Street, Strand, where he soon obtained a large practice. He enjoyed the friendship of Burke and of Johnson, and showed that he deserved to be loved by both. In a kind letter to Burke on 2 July 1788 (*Burke Correspondence*, 1844, iii. 78), Brocklesby makes him a present of 1,000*l.*, and says that he would be happy to repeat the gift 'every year until your merit is rewarded as it ought to be at court.' Brocklesby attended Dr. Johnson on many occasions, and in his last illness (Boswell, *Johnson*, ii. 481). Boswell describes a dinner at Brocklesby's (ii. 489), at which Johnson was present with Vallancy, the antiquarian, Murphy, and Mr. Devaynes, the king's apothecary, on 15 May 1784. In June 1784, when Johnson's going to Italy was discussed, Boswell (ii. 527) records another instance of Brocklesby's generosity: 'As an instance of extraordinary liberality of friendship, he told us that Dr. Brocklesby had upon this occasion offered him a hundred a year for his life. A grateful tear started into his eye as he spoke this in a faltering tone.' Many instances of this physician's kindness to less distinguished persons are recorded (*Burke Correspondence*, 21 July 1777; Munk, *Coll. of Phys.* ii. 203). The early distinction of Dr. Thomas Young was largely due to the kindness with which Brocklesby, who was his great-uncle, encouraged his studies (*Memoir of Thomas Young*, London, 1831), and Young dedicated his inaugural dissertation for M.D. to him. Brocklesby's first publication after he settled in London was 'An Essay concerning the Mortality among Horned Cattle,' 8vo, 1746. The chief new suggestion contained in it is that the infected bodies should be properly buried in deep graves. In 1749 he published 'Reflections on Antient and Modern Music, with the application to the cure of diseases, to which is subjoined an essay to solve the question wherein consisted the difference of antient music from that of modern times.' The author's name does not appear upon the title-page. The essay contains much learning and many interesting remarks. It was probably suggested by a story the author had heard in Edinburgh of a gentleman who had been engaged for the Pretender in 1715, had been himself wounded, and had lost two sons in the battle of Dunblane. He fell into a nervous fever from melancholy, and no treatment did him good till his physician caused a harper to play to him day after day, when he revived, and at last regained his health. Brocklesby seriously recommends the more regular use of music as a means of treatment. In 1760 he delivered the Harveian oration at the College of Physicians, and it was printed in quarto. Its most memorable passage is a fine panegyric upon the Dr. Hodges the account of whose death in poverty after he had stayed in attendance on the sick throughout the plague brought tears to the eyes of Dr. Johnson. In 1764 Brocklesby published his most important work, 'Œconomical and Medical

Observations, in two parts, from the year 1758 to the year 1763 inclusive, tending to the improvement of military hospitals and to the cure of camp diseases incident to soldiers,' 8vo, London. This was the first book in which sound principles of hygiene were laid down for the army. There were then but few barracks, and those few were ill built. Brocklesby shows that the soldiers must have plenty of air in their rooms if they are to remain healthy. Proper regulations are drawn up for field hospitals, and the necessity for giving the doctor absolute command in the hospital is pointed out. The observations on camp diseases are clear and original, and the remarks on treatment singularly wise. There is an interleaved copy of the book, with a few alterations and additions in the author's hand, in the library of the College of Physicians. To the same library Brocklesby gave a splendid copy, in twenty-five volumes folio, of Grævius and Gronovius's 'Thesaurus,' which contains an inscription in his handwriting. Brocklesby became F.R.S., and published some papers in the 'Philosophical Transactions.' He published also an account of a curious case of irregular pulse in 1767, and some experiments on seltzer water in 1768, both of which are to be found in the 'Medical Observations and Inquiries by a Society of Physicians in London,' 1767 and 1771. His compositions are all clear, and show that he possessed well-digested learning and good powers of observation. His conversation was abundant and full of all kinds of knowledge, but sometimes flowed too fast. Burke once speaks of 'Brocklesby's wild talk,' and Johnson once caught him up for giving too hasty an opinion as to the sanity of a reputed lunatic, and on another occasion corrected his quotation of some lines of Juvenal. But Brocklesby was often happy in his quotations, especially from Shakespeare, as Boswell's reports of his conversations with Johnson amply show (Boswell, *Johnson*, ii. 571). In Rees's 'Cyclopædia' (under the name) there is an account of a curious duel between Brocklesby and Dr. (afterwards Sir) John Elliot [q.v.] After a short period of failing health Brocklesby died suddenly on 11 Dec. in the same year as Burke. He was buried in the church of St. Clement Danes, and bequeathed his house and its furniture, pictures and books, with 10,000*l.*, to Dr. Thomas Young. His portrait was painted by Copley, and has been engraved.

[Leadbeater Papers, London, 1862, vol. i.; Boswell's Johnson, 1791, vol. ii.; Memoir of Thomas Young, London, 1831; Peacock's Life of Young, 1855; Burke's Correspondence (ed. Fitzwilliam); Munk's Coll. of Phys. 1878, vol. ii.; Brocklesby's several works.] N. M.

BROCKY, CHARLES (1807–1855), portrait and subject painter, was born at Temeswar, in the Banat, Hungary. When between six and seven years of age he lost his mother. Her sister had married the manager of a company of strolling players, and Brocky's father, who had originally been a peasant, followed the theatrical party in the capacity of hairdresser. He had many difficulties and hardships to contend against in his youth, but succeeded in obtaining some instruction in art at a free drawing-school at Vienna, and afterwards studied in the Louvre at Paris. He settled in London about 1837–8, and enjoyed some practice as a miniature-painter. Among his sitters was the queen. Brocky exhibited at the Royal Academy from 1839 to 1854 both portraits and subject pieces, among the latter an oil picture entitled 'The Nymph,' and four representations of the Seasons. The British Museum possesses four heads drawn by him in red chalk, executed in a masterly style, and four others are at the South Kensington Museum. When at Vienna he painted a St. John the Baptist, an altar-piece, a full-length portrait of the Emperor of Austria, a St. Cecilia, and a St. John the Evangelist. Brocky died in London on 8 July 1855, and was buried in Kensal Green cemetery.

[Wilkinson's Sketch of the Life of Charles Brocky, the Artist, 1870, 8vo.] L. F.

BRODERIC, ALAN, Lord Midleton. [See Brodrick.]

BRODERIP, FRANCES FREELING (1830–1878), authoress, second daughter of Thomas Hood, the poet, who died in 1845, by his wife, Jane Reynolds, who died in 1846, was born at Winchmore Hill, Middlesex, in 1830. She was named after her father's friend, Sir Francis Freeling, the secretary to the general post office. On 10 Sept. 1849 she was married to the Rev. John Somerville Broderip, son of Edward Broderip of Cossington Manor, who died in 1847, by his wife Grace Dory, daughter of Benjamin Greenhill. He was born at Wells, Somersetshire, in 1814, educated at Eton, and at Balliol College, Oxford, where he took his B.A. 1837, M.A. 1839, became rector of Cossington, Somersetshire, 1844, and died at Cossington on 10 April 1866. In 1857 Mrs. Broderip commenced her literary career by the publication of 'Wayside Fancies,' which was followed in 1860 by 'Funny Fables for Little Folks,' the first of a series of her works to which the illustrations were supplied by her brother, Tom Hood. Her other books appeared in the following order: 1. 'Chrysal, or a Story with an End,' 1861. 2. 'Fairyland, or Re-

creations for the Rising Generation. By T. and J. Hood, and their Son and Daughter,' 1861. 3. 'Tiny Tadpole, and other Tales,' 1862. 4. 'My Grandmother's Budget of Stories,' 1863. 5. 'Merry Songs for Little Voices. By F. F. Broderip and T. Hood,' 1865. 6. 'Crosspatch, the Cricket, and the Counterpane,' 1865. 7. 'Mamma's Morning Gossips,' 1866. 8. 'Wild Roses: Simple Stories of Country Life,' 1867. 9. 'The Daisy and her Friends: Tales and Stories for Children,' 1869. 10. 'Tales of the Toys told by Themselves,' 1869. 11. 'Excursions into Puzzledom. By T. Hood the Younger, and F. F. Broderip,' 1879. In 1860 she edited, with the assistance of her brother, 'Memorials of Thomas Hood,' 2 vols., and in 1869 selected and published the 'Early Poems and Sketches' of her father. She also, in conjunction with her brother, published in a collected form 'The Works of T. Hood,' 1869–73, 10 vols. She died at Clevedon on 3 Nov. 1878, in her forty-ninth year, and was buried in St. Mary's churchyard, Walton by Clevedon, on 9 Nov., leaving issue four daughters.

[Gent. Mag. (1866), i. 769; Academy (1878), xiv. 450.] G. C. B.

BRODERIP, JOHN (*d.* 1771?), organist, was probably a son of William Broderip, organist of Wells Cathedral [q. v.], who died in 1726. The first mention of him in the chapter records of Wells is on 2 Dec. 1740, when he was admitted a vicar choral of the cathedral for a year on probation. On 1 April 1741 it was ordered by an act of the dean and chapter that Broderip, who had supplied the place of organist from the death of Mr. Evans, should be paid the usual salary allowed on that account in proportion to the time. On the same day he was admitted into the place of organist of the cathedral. On 30 Sept. of the same year Broderip was fully appointed organist at a salary of 20*l.*, and master of the choristers at 7*l.* a year; on 3 Dec. following he was perpetuated as a vicar choral, and on 20 Nov. 1769 was appointed sub-treasurer, on the decease of Thomas Parfitt. He was present for the last time at the quarterly meeting of the dean and chapter and the vicars choral on 1 Oct. 1770, between which date and 26 April 1771 he died. Between 1766 and 1771 Broderip published a collection of 'Psalms, Hymns, and Spiritual Songs,' dedicated to the dean of Wells, Lord Francis Seymour. After his death some more settings of the Psalms by him were incorporated in a publication by Robert Broderip of Bristol, who is the subject of the succeeding article. In the latter years of his life Broderip was organist of Shepton Mallett, Somersetshire.

[Chapter records of Wells Cathedral, communicated by Mr. W. Fielder; Broderip's Psalms, &c.] W. B. S.

BRODERIP, ROBERT (*d.* 1808), organist and composer, lived at Bristol during the latter part of the eighteenth century. He was a relation of John Broderip [q. v.], organist of Wells Cathedral, probably either a brother or son, and also of the Broderip (*d.* 1807) who carried on business as a bookseller and publisher at 13 Haymarket, and who was one of the founders of the firm of Longmans. Next to nothing is known of Broderip's biography. He lived at Bristol all his life, and wrote a considerable quantity of music. His most important compositions are an occasional ode on the king's recovery, a concerto for pianoforte (or harpsichord) and strings, eight voluntaries for the organ, a volume of instructions for the pianoforte or harpsichord, a collection of psalms (partly by John Broderip), collections of duets, glees, &c., and many songs. He died in Church Lane, Bristol, on 14 May 1808. His eldest son, a lieutenant on the Achates, died of yellow fever in the West Indies in 1811, aged 19.

[Gent. Mag. 1807, i. 190, 1808, i. 559, 1811, i. 679; Brit. Mus. Cat.] W. B. S.

BRODERIP, WILLIAM (1683–1726), organist, as to whose parentage and education nothing is known, was appointed a vicar choral of Wells Cathedral on 1 April 1701. On 1 Oct. 1706 he was appointed sub-treasurer, and on 1 April 1708 a cathedral stall was assigned to him. On 2 Jan. 1712 he succeeded John George as organist of the cathedral, at an annual salary of 20*l.* He retained this post until his death, which took place 31 Jan. 1726. Broderip was buried in the nave of the cathedral; according to the inscription on his gravestone, he left a widow and nine children. Some of the latter probably followed their father's profession, as besides Robert [q. v.] and John Broderip [q. v.] there were two other organists of the name in the west of England towards the latter part of the eighteenth century, viz.: Edmund Broderip, who was organist of St. James's, Bristol, between 1742 and 1771, and another organist of the same name (whose christian name is not known) who lived at Leominster about 1770. It is most likely that some of these were the sons of William Broderip. The Tudway Collection contains an anthem, 'God is our hope and strength,' with instrumental accompaniments, which was written by Broderip in

1713 to celebrate the peace of Utrecht, but this is almost his sole composition extant.

[Chapter records of Wells Cathedral, communicated by Mr. W. Fielder; Harl. MS. 7338, &c.; subscription lists to John Broderip's Psalms, Hayes's Cantatas, Chilcot's Six Concertos, and Clark's Eight Songs.] W. B. S.

BRODERIP, WILLIAM JOHN (1789–1859), lawyer and naturalist, the eldest son of William Broderip, surgeon, Bristol, was born at Bristol on 21 Nov. 1789, and, after being educated at the Rev. Samuel Seyer's school in his native city, matriculated at Oriel College, Oxford, and graduated B.A. in 1812. Whilst at college he found time to attend the anatomical lectures of Sir Christopher Pegge, and the chemical and mineralogical lectures of Dr. John Kidd. After completing his university education, he entered the Inner Temple, and commenced studying in the chambers of the well-known Godfrey Sykes, where he had as contemporaries Sir John Patteson and Sir John Taylor Coleridge. He was called to the bar at Lincoln's Inn on 12 May 1817, when he joined the western circuit, and shortly after, in conjunction with Peregrine Bingham, began reporting in the court of common pleas. These reports were published in three volumes in 1820–22. In 1822 he accepted from Lord Sidmouth the appointment of magistrate at the Thames police court. He held this office until 1846, when he was transferred to the Westminster court, where he remained for ten years. He was compelled to resign from deafness, having obtained a high reputation for his good sense and humanity. In 1824 he edited the fourth edition of R. Callis upon the Statute of Sewers. This work, which combined antiquarian with strict legal learning, was one exactly suited to the taste and talent of the editor. He was elected bencher of Gray's Inn 30 Jan. 1850, and treasurer 29 Jan. 1851, and to him was confided the especial charge of the library of that institution.

Broderip throughout his life was an enthusiastic collector of natural objects. His conchological cabinet was unrivalled, and many foreign professors inspected the treasures which were accumulated in his chambers in Gray's Inn. This collection was ultimately purchased by the British Museum. He was elected a fellow of the Linnean Society in 1824, of the Geological Society in 1825, and of the Royal Society on 14 Feb. 1828. In co-operation with Sir Stamford Raffles he aided, in 1826, in the formation of the Zoological Society, of which he was one of the original fellows. He was secretary of the Geological Society for some time, and performed the arduous duties of that office with Roderick Murchison until 1830. To the 'Transactions' of this society he contributed numerous papers, but the chief part of his original writings on malacology are to be found in the 'Proceedings and Transactions of the Zoological Society.' Few naturalists have more graphically described the habits of animals. Broderip's 'Account of the Manners of a Tame Beaver,' published in the 'Gardens and Menagerie of the Zoological Society,' affords a favourable example of his tact as an observer and power as a writer. His contributions to the 'New Monthly Magazine' and to 'Fraser's Magazine' were collected in the volumes entitled 'Zoological Recreations,' 1847, and 'Leaves from the Note-book of a Naturalist,' 1852. He wrote the zoological articles in the 'Penny Cyclopædia,' viz. from Ast to the end, including the whole of the articles relating to mammals, birds, reptiles, crustacea, mollusca, conchifera, cirrigrada, pulmagrada, &c.; Buffon, Brisson, &c., and zoology. His last publication, 'On the Shark,' appeared in 'Fraser's Magazine,' March 1859. He died in his chambers, 2 Raymond Buildings, Gray's Inn, London, from an attack of serous apoplexy, on 27 Feb. 1859.

His writings not previously mentioned were: 1. 'Guide to the Gardens of the Zoological Society. By Nicholas A. Vigors and W. J. Broderip,' 1829. 2. 'Hints for collecting Animals and their Products,' 1832. 3. 'Memoir of the Dodo. By R. Owen, F.R.S., with an Historical Introduction by W. J. Broderip,' 1861, besides very numerous articles in magazines, newspapers, and reviews.

[Law Magazine and Law Review (1860), viii. 174–8; Proceedings of Linnean Society of London, 1859, pp. xx–xxv; Illustrated London News, (1846) ix. 317, (1856) xxviii. 253, portrait; Berger's W. J. Broderip, ancien magistrat, naturaliste, littérateur, Paris, 1856.] G. C. B.

BRODIE, ALEXANDER (1617–1680), of Brodie, lord of session, was descended from an old family, which in 1311 received the lands of Brodie in Elginshire from Alexander III. He was the eldest son of David Brodie of Brodie, by Grizzel, daughter of Thomas Dunbar, and niece by the mother's side of the Admirable Crichton, and was born on 25 July 1617. In 1628 he was sent to England, where he remained till 1632. In the latter year he was enrolled a student in King's College, Aberdeen, but he did not take a degree. On 19 May 1636 he was served heir of his father by a dispensation of the lords of

council, and on 28 Oct. of the same year he married the relict of John Urquhart of Craigston, by whom he had a son and daughter. He was a strong presbyterian, and, in December 1640, headed a party which demolished two oil paintings of the Crucifixion and the Day of Judgment in the cathedral of Elgin, and also mutilated the finely carved interior of the building as unsuitable for a place of worship (SPALDING, *Memorials of the Troubles in Scotland*). This extreme puritanical zeal exposed him to the revenge of Montrose, who, in February 1645, burned and devastated his property, and, according to Shaw (*History of the Province of Moray*), carried off the family papers of the house of Brodie. Brodie in 1643 was chosen to represent the county of Elgin in parliament, and frequently served on parliamentary committees. He was also elected a representative to the general assembly of the church of Scotland. On 6 March 1649 he was appointed a commissioner to meet Charles II at the Hague, and after his return he was on 22 June nominated a lord of session. He took the oaths in presence of the parliament on 23 July, and took his seat on the bench on 1 Nov. In February 1650 he was sent as commissioner of the general assembly to Breda, to induce the king to sign the national covenant. He was also a member of the various committees of estates during the attempt of Charles to wrest from Cromwell his dominion. In June 1653 he was cited by Cromwell to London to arrange for a union between the two kingdoms, but did not obey the summons, and 'resolved,' as he expressed it, 'in the strength of the Lord to eschew and avoid employment under Cromwell.' He retired to his estate until Cromwell's death, when, on 3 Dec. 1658, he again took his seat on the bench. At the Restoration he was superseded, and was also subjected to a fine of 4,000*l.* Scots. In 1661 he paid a lengthened visit to London. He died on 17 April 1680.

[The Diary of Alex. Brodie, from 25 April 1652 to 1 Feb. 1654, was published in 1740 by an unknown editor. The complete Diary, from 1650 to 17 April 1680, with a continuation by his son, James Brodie (1637–1708), to February 1685, was published by the Spalding Club in 1863, with an introduction by David Laing. The part published in 1740 is chiefly concerned with his religious experiences, and is not an adequate sample of the Diary as a whole, which conveys much important information regarding political events, and a specially interesting account of his visit to London, and of the persons with whom he there came into contact. See also Shaw's History of the Province of Moray; Genealogy of the Brodie family, by William Brodie (1862).] T. F. H.

BRODIE, ALEXANDER (1830–1867), sculptor, younger son of John Brodie, mariner, was born in 1830 at Aberdeen, where he served his apprenticeship as a brass-finisher in the foundry of Messrs. Blaikie Brothers. Like his elder brother, William Brodie [q. v.], he early manifested a taste for modelling figures. About 1856 he attended the school of the Royal Scottish Academy. He visited England, and after about a year's absence resumed his residence at Aberdeen, where he received many commissions. His talents were shown by his 'Motherless Lassie,' his 'Highland Mary,' his 'Cupid and Mask,' and a small statue of 'Grief strewing Flowers' upon a grave in front of the West Church in the city burying-ground. Encouraged by Sheriff Watson, Brodie undertook bust-portraiture and medallions, in both of which he was eminently successful. Embarrassed by the amount of work entrusted to him, his mind lost its balance, and he died 30 May 1867 by his own hand.

Brodie's best known productions are his large statue of the late Duke of Richmond, erected in the public square of Huntly, and the statue of the queen in marble which stands at the corner of Nicholas Street, Aberdeen.

[Aberdeen Free Press, Dundee Advertiser, and Scotsman, 31 May 1867; Art Journal and Gent. Mag. July 1867.] A. H. G.

BRODIE, SIR BENJAMIN COLLINS, the elder (1783–1862), sergeant-surgeon to the queen, was born at Winterslow in Wiltshire, in 1783. He was fourth child of Peter Bellinger Brodie, rector of the parish, who had been educated at Charterhouse and Worcester College, Oxford. His mother was daughter of Mr. Benjamin Collins, a banker at Salisbury. From his father, who was well versed in general literature, and a good Greek and Latin scholar, Brodie received his early education. In 1797, when the country was alarmed by the prospect of a French invasion, Brodie and two brothers raised a company of volunteers. At the age of eighteen he went up to London, to enter upon the medical profession. There he devoted himself at once to the study of anatomy, attending first the lectures of Abernethy, and in 1801 and 1802 those of Wilson at the Hunterian school in Great Windmill Street, working hard in the dissecting-room. He learned pharmacy in the shop of Mr. Clifton of Leicester Square, one of the licentiates of the Apothecaries' Company. At this time Brodie formed a friendship with William Lawrence, the celebrated surgeon, which was continued through life, and he was joint secretary with Sir Henry Ellis of an

'Academical Society,' to which many eminent writers belonged. The society had been removed from Oxford to London, and was dissolved early in the present century.

In the spring of 1803 Brodie entered at St. George's Hospital as a pupil under Sir Everard Home, and was appointed house-surgeon in 1805, and afterwards demonstrator to the anatomical school. When his term of office had expired, he assisted Home in his private operations, and in his researches on comparative anatomy. He diligently pursued for some years the study of anatomy, demonstrating in the Windmill Street school, and lecturing conjointly with Wilson until the year 1812. He was elected assistant-surgeon to St. George's Hospital in 1808, an appointment which he held for fourteen years, and in the next year entered upon private practice, taking a house in Sackville Street for the purpose. In 1808 he was elected a member of the Society for the Promotion of Medical and Chirurgical Knowledge, a society limited to twelve members, founded by Dr. John Hunter and Dr. Fordyce in 1793, and dissolved in 1818. At this period he contributed his first paper—the results of original physiological inquiries—to the 'Philosophical Transactions,' and was elected a fellow of the Royal Society in 1810. During the winter of 1810-11 he communicated to the society two papers, one 'On the Influence of the Brain on the Action of the Heart and the Generation of Animal Heat;' the other 'On the Effects produced by certain Vegetable Poisons (Alcohol, Tobacco, Woorara, &c.),' the first of which formed the Croonian lecture. So favourable was the impression he produced that the council awarded him the Copley medal in 1811, when he was twenty-eight years of age. His unremitting devotion to the work of his profession, without holiday for the period of ten years, now told seriously upon his health, but change of air and rest enabled him to resume his duties. His interest when he was house-surgeon having been excited by a case of spontaneous dislocation of the hip, he was led to study other cases of disease of the joints, and in 1813 he contributed a paper to the 'Medico-Chirurgical Transactions,' which formed the basis of his treatise on 'Diseases of the Joints,' published in 1818. This work went through five editions, and translations of it appeared in other countries. He again delivered the Croonian lecture at the Royal Society on the action of the muscles in general and of the heart in particular, and at this time performed the experiment of passing a ligature round the choledoch duct, the results of which were given in Brande's 'Journal.' In a paper on 'Varicose Veins of the Leg,' published in the seventh volume of the 'Medico-Chirurgical Transactions,' he described the first subcutaneous operation on record.

He married in 1816 the daughter of Serjeant Sellon, a lawyer of repute, and as practice steadily increased he removed in 1819 to Savile Row. In the same year he was appointed professor of comparative anatomy and physiology at the Royal College of Surgeons, and delivered four courses of lectures. While he held this office he was summoned to attend George IV, and assisted at an operation for the removal of a tumour of the scalp from which the king suffered. He was elected surgeon to St. George's Hospital in 1822, and his time was now busily employed with his hospital duties and lectures and an increasing and lucrative practice. In his attendance upon the king during the illness which terminated fatally he used to be at Windsor at six o'clock in the morning, staying to converse with the king, with whom Brodie was a favourite. When William IV succeeded to the throne, Brodie was promptly made sergeant-surgeon (1832), and two years afterwards a baronet. His lectures on diseases of the urinary organs were published in 1832, and those illustrative of local nervous affections in 1837. The numerous papers which he wrote from time to time will be found in his 'Collected Works.' In 1837 he travelled abroad in France for the first time.

In 1854 he published anonymously 'Psychological Inquiries,' essays in conversational form, intended to illustrate the mutual relations of the physical organisation and the mental faculties. In 1862 a second series followed, to which he put his name. He was elected president of the Royal Society in 1858, and this office he resigned in 1861, when he found that failing eyesight interfered with the discharge of the duties. He was president of the Royal College of Surgeons (1844), having been for many years examiner and member of the council, and having introduced important improvements into the system of examinations. He was elected first president of the General Medical Council (1858). He was also president of the Royal Medical and Chirurgical Society, and was chosen a member of such foreign bodies as the Institute of France, the Academy of Medicine of Paris, the Royal Academy of Sciences of Stockholm, and the National Institution of Washington. The university of Oxford conferred upon him the degree of D.C.L. He died at Broome Park, Surrey, in the eightieth year of his age, from a painful disease of the shoulder, 21 Oct. 1862. His wife had died two years previously. As a surgeon Brodie was a successful operator,

distinguished for coolness and knowledge, a steady hand, and a quick eye; but the prevention of disease was in his opinion higher than operative surgery, and his strength was diagnosis. An accurate observer, his memory was very retentive, and he was never at a loss for some previous case which threw light upon the knotty points in a consultation. Unflinching against quackery, he was instrumental in bringing St. John Long to justice, and his precise evidence in the witness-box was effective against the poisoner Palmer. His life was spent in active work, and he devoted it to the arrest of disease.

[Autobiography in Collected Works, ed. Hawkins, 1865; Biography by H. W. Acland; Lancet, 1862; British Medical Journal, 1862.]

R. E. T.

BRODIE, Sir BENJAMIN COLLINS, the younger (1817–1880), chemist, was the eldest son of Sir Benjamin Collins Brodie [see Brodie, Sir Benjamin Collins, 1783–1862]. He was born in Sackville Street, Piccadilly, London, in 1817. Brodie was educated at Harrow and at Balliol College, Oxford, where he graduated B.A. in 1838. He always manifested a strong love for scientific inquiry, and especially devoted his attention to chemistry. In 1843 his first original paper appeared in the 'Proceedings of the Ashmolean Society,' which was on the 'Synthesis of the Chemical Elements,' based on an examination which involved a long-continued and delicate investigation. In 1852 he had completed this inquiry, and published the results in a communication to the same society. In 1848 Brodie's 'Investigations of the Chemical Nature of Wax' appeared in the 'Philosophical Transactions.' In this year he married the daughter of the late John Vincent Thompson, serjeant-at-law. From this period to 1855 Brodie was actively engaged in chemical inquiries, many of them of a difficult character. In the 'Philosophical Transactions' for 1850 will be found an elaborate memoir 'On the Conditions of Certain Elements at the Moment of Chemical Change,' which is an example of well-devised experimental research and of very close observation. The 'Chemical Society's Journal' for 1851 contains a paper by him, entitled 'Observations on the Constitution of the Alcohol Radical and on the Formation of Ethyl.' In the 'Royal Institution Proceedings' for the same year appeared a paper by him 'On the Allotropic Changes of certain Elements,' and two others, requiring equally delicate and searching investigations, and involving philosophical deductions of a high class. Brodie, having established his character as a high-class inquirer into some abstruse branches of chemistry, was in 1865 appointed professor of chemistry in the university of Oxford, and he was president of the Chemical Society in the years 1859 and 1860.

In addition to inquiries of considerable interest on the elements, sulphur, iodine, and phosphorus, which were communicated to learned societies between 1851 and 1855, Brodie was engaged on an investigation into the allotropic states of carbon, especially of ordinary charcoal, and graphite or plumbago. This led to the discovery of an important process for the purification of graphite, which was of considerable technical value. He published the results of this inquiry in the 'Annales de Chimie' for 1855 as a 'Note sur un nouveau procédé pour la purification et la désagrégation du Graphite.' This was followed in 1859 by a memoir 'On the Atomic Weight of Graphite' in the 'Philosophical Transactions.' The conclusions to which Brodie arrived were that carbon in the form of graphite functions is a distinct element, for which he proposed the term *graphon*; that it forms a marked system of combinations, into which it enters with a determinate atomic weight (33). Previously to this, Brodie had been elected a fellow of the Royal Society.

His next inquiries of interest were connected with the peroxide of barium and its influence on the reduction of metallic oxides —on the formation of the peroxides of the radicals of the organic acids—and on the oxidation and deoxidation effected by the peroxide of hydrogen. These investigations may be regarded as having brought Brodie's chemical researches to a termination. We find no record of any work of interest between 1862 and 1880, when he died. In 1862 he succeeded his father in the baronetcy, and in 1872 he was created hon. D.C.L. at Oxford. His most important discovery was certainly that of graphitic acid, and the modified form of carbon which he detected in graphite and its acid. In relation to his special investigations Brodie published seventeen papers, all of them marked by the thoroughness and refinement of the modes of research adopted.

[Royal Society's Proceedings; Philosophical Transactions; Royal Society Catalogue of Scientific Papers; Journal of the Chemical Society; Annales de Chimie.]

R. H–T.

BRODIE, DAVID (1709?–1787), captain in the royal navy, one of a collateral branch of the Brodies of Brodie, after serving for many years, both in the navy and mercantile marine, was promoted to the rank of lieutenant on 5 Oct. 1736. In 1739 he served under Vernon at Porto Bello, and in 1741 at Cartagena. On 3 May 1743 he was made commander, ap-

pointed to the Merlin sloop in the West Indies, and for about four years was repeatedly engaged with French and Spanish cruisers and privateers, several of which he captured and brought in. In one of these encounters he lost his right arm. Early in 1747 Rear-admiral Knowles appointed him acting captain of the Canterbury; but he was not confirmed in that rank till 9 March 1747-8, when, after the capture of Port Louis, he was appointed to the Strafford. In this ship he was present at the unsuccessful attempt on Santiago, and had a distinguished share in the battle off Havana on 1 Oct. 1748, when the one prize of victory, the Conquistador, struck to the Strafford. In the courts-martial which followed [see KNOWLES, SIR CHARLES] Brodie's evidence told strongly against the admiral's accusers; he maintained that the admiral had done his duty throughout. In 1750 Brodie was compelled to memorialise the admiralty, representing himself as incapacitated from further service, and praying for some mark of the royal favour. In 1753 he presented another and stronger memorial to the same effect, consequent on which a pension was granted to him. Nevertheless in 1762, on the declaration of war with Spain, he applied to the admiralty for a command. His application was not accepted, and accordingly when, in 1778, his seniority seemed to entitle him to flag rank, he was passed over as not having served 'during the last war.' This was then the standing rule, and was in no way exceptional to Brodie, although in his case, as in many others, it fell harshly on old officers of good service. On 5 March 1787 Brodie's claims were brought up in the House of Commons, and he was represented as a much-injured man, deprived of the promotion to which he was justly entitled. The house negatived the motion made in Brodie's favour. The case, however, led to a modification of the rule, and from that time captains who were not eligible for promotion when their turn arrived were distinctly placed on a superannuated list. Brodie died in 1787, and was buried in the Abbey Church at Bath.

[Naval Chronicle, iii. 81.] J. K. L.

BRODIE, GEORGE (1786?–1867), historian, was born about 1786 in East Lothian, where his father was a farmer on a large scale, and a contributor to the improvement of Scottish husbandry. Educated at the high school and university of Edinburgh, he became in 1811 a member of the Faculty of Advocates. He seems to have done little at the bar. He was an ardent whig, and his political creed partly inspired the one work by which he is known, his 'History of the British Empire from the accession of Charles the First to the Restoration, with an introduction tracing the progress of society and of the Constitution from the feudal times to the opening of the history, and including a particular examination of Mr. Hume's statements relative to the character of the English government.' The 'statements' which Brodie undertook to refute were chiefly those in which Hume found precedents for the claims of the Stuarts in the action of the Tudor sovereigns. Brodie's history was by far the most elaborate assault on the Stuarts and their apologists, especially Hume and Clarendon, and the most thoroughgoing vindication of the puritans, that had then appeared. It was not of high historical value. It was reviewed in the 'Edinburgh Review' for March 1824, probably by John Allen of Holland House celebrity (see Lord Jeffrey's letter to him in LORD COCKBURN'S *Life of Jeffrey*, 2nd ed. 1852, ii. 217). While generally laudatory, the reviewer censured Brodie's indiscriminating partisanship. Guizot has expressed his surprise that so passionate a partisan should have written with so little animation (Preface to the *Histoire de la Révolution d'Angleterre*, 4th ed. 1860, i. 15).

In the Scotch agitation for the first Reform Bill, Brodie presided at a very numerous gathering of the working-men of Edinburgh held on Arthur's Seat in November 1831 against the rejection of the bill by the peers. In 1836 he was appointed historiographer of Scotland, with a salary of 180*l.* a year. In 1866 appeared a second edition of his History, with the original title slightly expanded into 'A Constitutional History of the British Empire,' &c. Besides the History, Brodie published an edition of Stair's 'Institutes of the Law of Scotland, with commentaries and a supplement as to mercantile law.' Lord Cockburn says of it and him (*Journal*, 1874, ii. 113): 'His edition of Stair is a deep and difficult legal book. His style is bad, and his method not good.' Brodie was also author of a pamphlet entitled 'Strictures on the Appellate Jurisdiction of the House of Lords,' 1856. He died in London on 22 Jan. 1867.

[Brodie's writings; obituary notice in Scotsman, 31 Jan. 1867; Gent. Mag., March 1867.] F. E.

BRODIE, PETER BELLINGER (1778–1854), conveyancer, was born at Winterslow, Wiltshire, on 20 Aug. 1778, being the eldest son of the Rev. Peter Bellinger Brodie, rector of Winterslow 1742–1804, who died 19 March 1804, by his marriage in 1775 with

Sarah, third daughter of Benjamin Collins of Milford, Salisbury, who died 7 Jan. 1847. He early chose law as a profession, but in consequence of an asthmatic complaint from which he suffered, he devoted himself to conveyancing, and became a pupil of the well-known Charles Butler. He was ultimately called to the bar at the Inner Temple on 5 May 1815. He soon obtained a considerable share of business, and it increased so as to place him in a few years amongst the most eminent conveyancers of the time. One of the drafts by which he was earliest known was that of the Rock Life Assurance Company, 1806, which has ever since been considered the best model for similar instruments, and only departed from where some variation is rendered necessary, as in the charter of King's College, London, which he also drew in 1829. With the history of law amendment Brodie's name is intimately connected. He was one of the real property commissioners in 1828, and took a very leading part in their important labours. Their first report, which was made in May 1829, examined, amongst others, the important subjects of fines and recoveries. This part of the report was drawn up by Brodie, as was also the portion of the second report, June 1830, relating to the probate of wills, and the very able and learned part of the third report, May 1832, relating to copyhold and ancient demesne. The fourth report was made in April 1833, and no part of this was prepared by him. Soon after the presentation of the first report it was determined to bring in bills founded upon its recommendations, and Brodie prepared the most important of these, that for abolishing fines and recoveries, which was brought in at the end of the session 1830, and became law in 1838. Lord St. Leonards, in his work on the 'Real Property Statutes,' declares this act to be 'a masterly performance, reflecting great credit on the learned conveyancer by whom it was framed.' The preparation of his part of the reports, and especially of the bills, for a time almost deprived Brodie of his private business; but he recovered his practice by degrees, so as ultimately to have it fully restored. He was the author of a work entitled 'A Treatise on a Tax on Successions to Real as well as Personal Property, and the Removal of the House-tax, as Substitutes for the Income-tax, and on Burdens on Land and Restrictions on Commerce and Loans of Money,' 1850. He died at 49 Lincoln's Inn Fields, London, on 8 Sept. 1854. He was twice married: first, on 16 March 1810, to Elizabeth Mary, daughter of Sutton Thomas Wood of Oxford—she died on 9 May 1825; secondly, on 1 June 1826, to Susan Mary, daughter of John Morgan. She died in London on 4 Dec. 1870. The elder Sir B. C. Brodie was his brother.

[Law Rev. 1855, xxi. 348–54.] G. C. B.

BRODIE, WILLIAM (*d.* 1788), deacon of the Incorporation of the Edinburgh Wrights and Masons, and burglar, was the only son of Convener Francis Brodie, who carried on an extensive business as wright and cabinet-maker in the Lawnmarket, Edinburgh, and was for many years a member of the town council. On his father's death Brodie succeeded to the business, and in the following year was elected one of the ordinary deacon councillors of the city. At an early age he acquired a taste for gambling, and almost nightly frequented a disreputable gambling-house in the Fleshmarket Close. In 1786 he became acquainted with three men of the lowest character, George Smith, Andrew Ainslie, and John Brown. With Brodie for their leader, these men formed themselves into a gang of burglars, and at the latter end of 1787 a number of robberies were committed by them in and around Edinburgh. No clue could be discovered to the perpetrators. On 5 March 1788 the gang broke into the excise office in Chessel's Court, Canongate. This undertaking had been wholly suggested and most carefully planned by Brodie. Though disturbed in their operations, they managed to get off with their booty undiscovered. Brown, however, who was under sentence of transportation for a crime committed in England, turned king's evidence. Brodie fled, and for a long time evaded pursuit. Through the means of some letters which he had incautiously written, he was at length traced to Amsterdam, where he was apprehended on the eve of his departure for America. He and Smith were tried at the high court of justiciary on 27 Aug. 1788, before the lord justice clerk and Lords Hailes, Eskgrove, Stonefield, and Swinton, and on the following morning the jury returned a verdict of guilty against both of them. In accordance with the sentence, they were hanged at the west end of the Luckenbooths on 1 Oct. 1788. Notwithstanding his profligate habits Brodie contrived almost to the last to preserve a fair character among his fellow-citizens. It is also a curious fact that he sat in the same court as a juryman in a criminal case only a few months previously to his own appearance there in the dock. A play written by Messrs. R. L. Stevenson and W. E. Henley, and founded upon the incidents of his life, was produced at the Prince's Theatre, London, on 2 July 1884, under the name of

'Deacon Brodie, or the Double Life.' Two etchings of him by Kay will be found in the first volume of 'Original Etchings,' Nos. 105 and 106.

[Kay's Original Portraits and Caricature Etchings (1877), i. 96, 119, 141, 256–66, 399, ii. 8, 120–1, 286; Creech's Trial of Brodie and Smith (2nd edit. 1788); Scots Mag. (1788), l. 358–9, 365–72, 429–37, 514–16; Gent. Mag. (1788), lviii. pt. ii. 648, 829, 925.]

G. F. R. B.

BRODIE, WILLIAM (1815–1881), sculptor, eldest son of John Brodie, a shipmaster of Banff, was born at that place on 22 Jan. 1815. About 1821 the Brodie family removed to Aberdeen, where William was apprenticed to a plumber. He devoted his evenings, however, to scientific studies at the Mechanics' Institution, and developed a singular dexterity in making instruments for his own experiments. He amused himself in casting leaden figures of notable personages. He also seems to have painted in oil, and after his marriage in 1841 is said to have produced a considerable number of portraits. His peculiar talent for modelling medallion likenesses on a small scale attracted much attention, and especially that of Sheriff Watson and Mr. John Hill Burton, by the latter of whom he was encouraged to migrate to Edinburgh in 1847. There he studied for four years in the Trustees' School of Design; essayed modelling on a larger scale, and executed a bust of Lord Jeffrey, one of his earliest patrons. About this time Brodie spent some months at Rome, where he modelled a figure of Corinna, the lyric muse, exhibited at the Royal Scottish Academy, of which he was elected an associate in 1857, a full member in 1859, and secretary in 1876. He is believed to have executed more portrait busts than any other artist. His ideal works included the 'Blind Girl,' 'Hecamede,' 'Rebecca,' 'Ruth,' 'The Maid of Lorn,' 'Amy Robsart,' 'Sunshine,' 'Storm,' and 'Memory.' Brodie executed four busts of the queen, one of which is in Balmoral Castle, the colossal statue of the prince consort at Perth, and one of the representative groups in bronze for the Scottish memorial to the prince in Edinburgh. Amongst other works are the bronze statue of Dr. Graham, master of the mint at Glasgow, and of Sir James Young Simpson at Edinburgh, and the marble statue of Sir David Brewster in the quadrangle of the university building, Edinburgh, and of Lord Cockburn in the Parliament House of the same city. He executed portrait busts of most of the celebrities of his day. Not long before his death Brodie received a commission for a statue of the Hon. George Brown, a prominent Canadian politician, for the city of Toronto. After two years of decline Brodie died on 30 Oct. 1881 at Douglas Lodge in Edinburgh.

[Aberdeen Journal, 31 Oct. and 1 and 7 Nov. 1881; Scotsman and Edinburgh Courant, 31 Oct. and 5 Nov. 1881; Times, 1 Nov. 1881; Athenæum, 5 Nov. 1881; Art Journal, December 1881; Irving's Book of Scotsmen, 1881.]

A. H. G.

BRODRICK, ALAN, Lord Midleton (1660?–1728), Irish statesman and lord chancellor of Ireland, came of a family which for several generations had been settled in Surrey. He was the second son of St. John Brodrick by Alice, daughter of Sir Randal Clayton of Thelwall, Cheshire, and was born about 1660. The family of Brodrick had greatly profited by the forfeitures in Ireland. Alan, eldest brother of St. John, was on 19 March 1660 appointed one of the commissioners for settling the affairs of Ireland, and shortly afterwards received a grant of 10,759 acres. St. John, who had taken an active part in the civil wars beginning in 1641, received in 1653 a large grant of lands in the barony of Barrymore, Cork, which was supplemented, under the Act of Settlement in 1670, by an additional grant of lands in the baronies of Barrymore, Fermoy, and Orrery, the whole being erected into the manor of Midleton. The wealth, ability, and political activity of the Brodricks gave them an influence in Ireland almost equal to that of the Boyles. Brodrick adopted the profession of law. Having taken an active part in behalf of William of Orange, he was, along with his brother, attainted by the Irish parliament of James II, a circumstance which probably assisted his early promotion under William. On 19 Feb. 1690–1 he was made second serjeant, and on 6 June 1695 he was appointed solicitor-general for Ireland, an office in which he was continued after the accession of Queen Anne. He entered the Irish House of Commons in 1692 as member for the city of Cork, and on 24 Sept. 1703 he was chosen speaker. On account of his liberal views in regard to 'Toleration,' and of his opposition to the Sacramental Test Act, he lost the favour of the government, and when the house refused to pass some bills promoted by the lord-lieutenant he was removed from the office of solicitor-general. When, however, the appointment of Earl of Pembroke to the viceroyalty was determined on, he was, 12 June 1707, appointed attorney-general for Ireland. As Lord Pembroke deemed it impossible to obtain the repeal of the Test Act in the Irish parliament, Brodrick went to England to persuade the government to propose its repeal in the English parliament, but without success. In May

1710 he was called to the upper house as chief justice of the queen's bench, but his attachment to the principles of the revolution caused his dismissal in 1711. In 1713 he re-entered the Irish parliament as member for the city of Cork, and notwithstanding the opposition of the government he was chosen speaker by a majority of four votes. Having been the principal adviser in the measures taken by the Irish House of Commons to secure the protestant succession, he was appointed by George I, 1 Oct. 1714, lord chancellor of Ireland, and on 13 April 1715 was raised to the peerage as Baron Brodrick of Midleton. On 5 Aug. 1717 he was advanced to the dignity of Viscount Midleton. In the same year that he was made lord chancellor he entered the British parliament as member for Midhurst, Sussex, which he continued to represent till his death. Although he attached himself to the party of Sunderland, he strenuously opposed the Peerage Bill, resisting with equal firmness the solicitations and menaces of Sunderland, and turning a deaf ear even to the urgent requests of the sovereign. Although possibly chargeable with opiniativeness, his sterling honesty, bold independence, and sincere patriotism, entitle him to the highest praise. On the death of Sunderland he attached himself to Carteret in opposition to Townshend and Walpole, against the latter of whom he ultimately cherished a violent antipathy. By his conduct in the famous case, Sherlock *v.* Annesley, Midleton incurred the serious displeasure of the Irish lords, and as by his opposition to Wood's coinage patent he had rendered himself specially obnoxious to the Duke of Grafton, the lord-lieutenant, Grafton connived at a resolution of the lords 'that through the absence of the lord high chancellor there has been a failure of justice in this kingdom by the great delay in the high court of chancery and in the exchequer chamber.' The resolution was, however, robbed of its sting by a counter resolution in the House of Commons, and Walpole, to win if possible the all-essential support of Midleton for the patent, appointed Carteret lord-lieutenant. Carteret, dreading dismissal from office, exerted all his personal influence on Midleton, but in vain. The result was a personal breach between them, and Midleton, disgusted with his cold reception at the castle, resigned office 25 May 1725. Notwithstanding his strenuous opposition to the patent, Midleton not only refused to accept the dedication to him of Swift's 'Drapier's Letters,' but supported the prosecution of their author, on the ground that they tended to 'create jealousies between the king and the people of Ireland.' He died at his country seat, Ballyanan, Cork, in 1728. He was thrice married: first to Catherine, second daughter of Redmond Barry of Rathcormack, by whom he had one son and one daughter; secondly, to Alice, daughter of Sir Peter Courthorpe of the Little Island, Cork, by whom he had two sons and a daughter; and thirdly, to Anne, daughter of Sir John Trevor, master of the rolls, by whom he had no issue.

F. H.

BRODRICK, THOMAS (*d.* 1769), vice-admiral, entered the navy about 1723. In 1739 he was a lieutenant of the Burford, Vernon's flagship at Porto Bello, and commanded the landing party which stormed the Castillo de Fierro. In recompense for his brilliant conduct Vernon promoted him to the command of the Cumberland fireship, in which he in 1741 took part in the expedition to Cartagena. On 25 March he was posted into the Shoreham frigate, and continued actively employed during the rest of that campaign, and afterwards in the expedition to Cuba [see VERNON, EDWARD]. After other service he returned to England in 1743, and early in the following year was appointed to the Exeter of 60 guns. In March of the following year he was appointed to the Dreadnought, which was sent out to the Leeward Islands, and continued there till after the peace in 1748. In May 1756 Brodrick was sent out to the Mediterranean in command of reinforcements for Admiral Byng, whom he joined at Gibraltar just before the admiral was ordered home under arrest. He had meantime been advanced to be rear-admiral, in which rank he served under Sir Edward Hawke till towards the close of the year, when the fleet returned home. In January 1757 he was a member of the court-martial on Admiral Byng [see BYNG, HON. JOHN]; and was afterwards, with his flag in the Namur, third in command in the expedition against Rochfort [see HAWKE, LORD EDWARD].

Early in 1758 Brodrick was appointed as second in command in the Mediterranean, with his flag on board the Prince George of 90 guns. On 13 April, being then off Ushant, the Prince George caught fire, and out of a complement of nearly 800, some 250 only were saved; the admiral himself was picked up, stark naked, by a merchant-ship's boat, after he had been swimming for about an hour.

Brodrick and the survivors of his ship's company were taken by the Glasgow frigate to Gibraltar, where he hoisted his flag in the St. George. In the following February he was promoted to be vice-admiral, and was shortly afterwards superseded by Admiral Boscawen, under whom he commanded during the blockade of Toulon, and in the action of 18–19 Aug., culminating in the burning or capture of the French ships in Lagos Bay [see BOSCAWEN, EDWARD]. When Boscawen returned to England, Brodrick blockaded the French ships at Cadiz so closely, that even the friendly Spaniards could not resist making them the subject of insolent ridicule. They are said to have stuck up a notice in some such terms as 'For sale, eight French men-of-war. For particulars apply to Vice-admiral Brodrick.' The French ships did not stir out till the passage was cleared for them by a gale of wind, which compelled the blockading squadron to put into Gibraltar. Brodrick then returned to England. He had no further employment, and died 1 Jan. 1769 of cancer in the face.

J. K. L.

BROGHILL, BARON (1621–1679). [See BOYLE, ROGER.]

BROGRAVE, SIR JOHN (*d.* 1613), lawyer, was the son of Richard Brograve by his wife, daughter of —— Sares. He was probably educated at Cambridge. In 1576 he was autumn reader at Gray's Inn. He was elected one of the treasurers of that society in February 1579-80, and again in February 1583-4. In 1580 he was appointed attorney for the duchy of Lancaster, and he held that office under James I, who knighted him. He was nominated one of the counsel to the university of Cambridge in 1581. He resided at Braughing in Hertfordshire, of which county he was custos rotulorum for thirty years. He was M.P. for Preston 1586, 1597, and 1601, and for Boroughbridge 1592. He died on 11 Sept. 1613, and was buried at Braughing. By his marriage with Margaret, daughter of Simeon Steward of Lakenheath, Suffolk (she died 5 July 1503), he had issue three sons and two daughters.

He is the author of 'The Reading of Mr. John Brograve of Grayes Inne, made in Summer 1576, upon part of the Statute of 27 H. 8. C. 10, of Vses, concerning Jointures, beginning at the twelfth Branch thereof.' Printed in 'Three Learned Readings made upon three very usefull Statutes, by Sir James Dyer, Brograve and Tristram Risdon,' London, 1648, 4to. (Cf. MS. Harl. 829, art. 3.)

(1680), 294, 298, 307; Cooper's Annals of Cambridge, ii. 610; Baga de Secretis, pouch 48; Addit. MS. 5821, f. 271; Lansd. MS. 92, art. 52, 1119; Wood's Athenæ Oxon. (Bliss), ii. 609, iii. 174; Burke's Extinct and Dormant Baronetcies (1841), 84.] T. C.

BROKE. [See also BROOK and BROOKE.]

BROKE or BROOKE, ARTHUR (*d.* 1563), translator, was the author of 'The Tragicall Historye of Romeus and Iulieit written first in Italian by Bandell, and nowe in English by Ar. Br. In ædibus Richard Tottelli.' The colophon runs: 'Imprinted at London in Flete Strete within Temble barre at the signe of the hand and starre of Richard Tottill, the XIX. day of Nouember An. do. 1562.' The book was entered in the Stationers' Register late in 1562 as 'The Tragicall History of the Romeus and Juliett with sonettes.' The volume is mainly of interest as the source whence Shakespeare drew the plot of his tragedy of 'Romeo and Juliet.' It is written throughout in rhymed verse of alternate lines of twelve and fourteen syllables. Broke did not (as the title-page states) translate directly from the Italian of Bandello, but from the 'Histoires Tragiques extraictes des Œuvres de Bandel' (Paris, 1559), by Pierre Boaistuau surnamed Launay and François de Belle-Forest. Broke does not adhere very closely to his French original: he developes the character of the Nurse and alters the concluding scene in many important points, in all of which he is followed by Shakespeare. In the address to the reader Broke shows himself a staunch protestant, and deplores the introduction into the story of 'dronken gossyppes and superstitious friers (the naturally fitte instrumentes of unchastitie).' He also notices that the tale had already been acted on the stage with great applause. The popularity of Broke's undertaking is proved not only by Shakespeare's literal adoption of its story, but by two imitations of it, issued almost immediately after its first publication (Bernard Garter's 'Tragical History of two English Lovers,' 1565, and William Painter's 'Romeus and Giuletta' in the 'Palace of Pleasure,' 1566).

Only three copies of the first edition of Broke's translation are now known to be extant: one in the Malone collection at the Bodleian, a second in Mr. Huth's library, and the third—an imperfect copy—among Capell's books at Trinity College, Cambridge.

According to the Stationers' Register, Tottell obtained a license to reprint the work in 1582, but no edition of that date has been met with. Ralph Robinson reissued the original edition in 1587, and added to the title the words: 'Contayning in it a rare example of true constancie, with the subtill counsells and practises of an old fryer and their ill event.' Modern reprints are numerous. Malone issued it (without the prefatory notices) in his 'Supplement to Shakespeare,' 1780, and struck off twelve separate copies for private distribution. It reappeared in the Shakespeare variorum edition of 1821; in J. P. Collier's 'School of Shakespeare,' 1843; in W. C. Hazlitt's 'School of Shakespeare,' 1874; and in the New Shakspere Society's 'Originals and Analogues,' pt. i. (1875), edited by P. A. Daniel.

Broke died in the year following the production of his chief work. In 1563 was published 'An Agreement of sundry places of Scripture seeming in shew to Iarre, seruing in stead of commentaryes, not only for these but others lyke. Translated out of French and nowe fyrst publyshed by Arthure Broke.' The printer, Lucas Harrison, states in his address to the reader at the beginning of the book that Broke was out of the country while it was passing through the press; but on the last page some verses headed 'Thomas Broke the younger to the reader' state that Broke had recently perished at sea. Among George Turberville's 'Epitaphes and other Poems' (1567) is one 'On the death of Maister Arthur Brooke, drownde in passing to New Haven.' Turberville writes very pathetically of Broke's sudden death, and praises very highly his tale of

> Julyet and her mate;
> For there he shewde his cunning passing well,
> When he the tale to English did translate.

Turberville describes Broke as a young man, and notes that he was crossing the seas to serve abroad in the English army.

[Introduction to Broke's Romeo and Juliett in J. P. Collier's School of Shakespeare (1843); Broke's Agreement (1563); Turberville's Epitaphes (1567); Ritson's Bibliographia Poetica; Brit. Mus. Cat.] S. L.

BROKE, Sir PHILIP BOWES VERE (1776–1841), rear-admiral, of an old Suffolk family, was born at Broke Hall, near Ipswich, on 9 Sept. 1776. He early manifested an inclination for the sea, and at the age of twelve was entered at the Royal Naval Academy in Portsmouth Dockyard, from which, in June 1792, he was appointed to the Bulldog sloop under the command of Captain George Hope, whom, in August 1793, he followed to the Éclair, then in the Mediterranean, and afterwards employed during the occupation of Toulon and the siege of Bastia. In May 1794 he was discharged into the Romulus, and was present when Lord Hood chased the French fleet into Golfe Jouan 11 June 1794, and in the action off Toulon 13–14 March 1795. In June he was appointed to the Britannia, flagship of the commander-in-chief, was in her in the engagement off Toulon on 13 July 1795, and on the 18th was appointed third lieutenant of the Southampton frigate under the command of Captain Macnamara. During the next eighteen months the Southampton was actively employed on the coast of Italy, often with the squadron under Commodore Nelson, and was with the fleet in the action off Cape St. Vincent 14 Feb. 1797. In the following June she was sent home and paid off. Broke was almost immediately appointed to the Amelia frigate in the Channel fleet, and in her was present at the defeat and capture of the French squadron on the north coast of Ireland 12 Oct. 1798. On 2 Jan. 1799 he was made commander and appointed to the Falcon brig, from which a few months later he was transferred to the Shark sloop, attached to the North Sea fleet, under Lord Duncan, and employed for the most part in convoy service. On 14 Feb. 1801 he was advanced to the rank of captain, after which he remained unemployed for four years. His father died shortly after his promotion, and on 25 Nov. 1802 he married Sarah Louisa, daughter of Sir William Middleton, bart. When the war again broke out, he immediately applied for a ship, but without success, till in April 1805 he was appointed to the Druid frigate, which he commanded in the Channel and on the coast of Ireland for the next sixteen months. On 31 Aug. 1806 he was appointed to the Shannon, a fine 38-gun frigate, carrying 18-pounders on her main deck, 32-pounder carronades on quarter-deck and forecastle. During the summer of 1807 the Shannon was employed on the coast of Spitzbergen, protecting the whalers, and in December was with the squadron at the reduction of Madeira. During the greater part of 1808 she was cruising in the Bay of Biscay, and on the night of 10–11 Nov., attracted by the sound of the firing, arrived on the scene of action in time to witness the capture of the French Thétis by the Amethyst, Captain Michael Seymour—a capture which this unfortunate arrival of the Shannon, as well as of the line-of-battle ship Triumph, deprived of some of its brilliance. The Shannon afterwards towed the prize to Plymouth, but Broke, as a recognition that the capture was due to the Amethyst alone, obtained the con-

currence of the Shannon's officers and ship's company to forego their claim to share in the prize. As the Triumph's claim, however, was maintained, the generous offer of the Shannons was declined. The next two years were passed in similar service, cruising from Plymouth, off Brest, and in the Bay of Biscay; it was not till June 1811 that she was ordered to refit for foreign service. In the beginning of August she sailed for Halifax, where she arrived 24 Sept. The relations between England and the States were even then severely strained, and on 18 June 1812 war was declared.

For the next year the Shannon was engaged in cruising, without any opportunity of important service. Broke was keenly sensible of the urgent necessity of keeping the ship at all times in perfect fighting trim, a necessity which the successes of the previous twenty years had tempted some of his contemporaries to ignore. At very considerable pecuniary loss both to himself and to the ship's company, he carried out a resolution to make no prizes which would entail sending away prize crews, and so weakening his force, and most of the ships captured were therefore burned. But, more than this, he bestowed extraordinary pains on training his men, especially in the exercise of the great guns. While the custom of our service at that time was never to cast the guns loose except for action, Broke instituted a course of systematic training, and every day in the week, except Saturday, the men, either by watches or all together, were exercised at quarters and in firing at a mark, so that in course of time they attained a degree of expertness such as had never before been approached. To this end everything was made subservient; concentrating marks were made on the decks, and at Broke's own cost sights were fitted to the guns; but all vain show was neglected, and the Shannon, though clean and healthy, was perhaps a little looked down on by some of her more showy companions. Her excellence in gunnery, however, began to be talked about; and, much to Broke's annoyance, many ships arriving on the station fresh from England brought out orders to exchange a certain number of men with the Shannon, so that they too might receive the benefit of the new system. In May 1813 the Shannon was cruising off Boston, keeping watch on the American frigate Chesapeake, which had been newly recommissioned by Captain James Lawrence, lately in command of the Hornet when she sank the Peacock. On 1 June, finding his store of water running low, Broke adopted the singular plan of writing formally to Lawrence, requesting him to give him a meeting. He stated in exact detail the Shannon's force, and pledged himself to such measures as would insure the absence of all other English ships, adding, 'or I would sail with you, under a flag of truce, to any place you think safest from our cruisers, hauling it down when fair to begin hostilities.' This letter, however, was never delivered; for before the vessel by which it was sent reached the harbour the Chesapeake was under way and standing out under a cloud of canvas. Expectation in Boston was at an intense height, and crowds of pleasure-boats and other small craft accompanied the ship in order to witness her triumph over the enemy. As she came on she shortened sail, sent down her upper yards, and so, with a flag at each masthead, rapidly drew near. Broke meanwhile called his men aft on the quarter-deck, and, after the manner of the heroes of old, addressed them in a short and telling speech, commenting on the successes which the Americans with a great superiority of force had obtained, and concluding, 'Don't cheer, go quietly to your quarters. I feel sure you will all do your duty; remember you have the blood of hundreds of your countrymen to avenge.' 'Mayn't we have three ensigns, sir, like she has?' asked a seaman. 'No,' answered Broke; 'we've always been an unassuming ship.' As the Chesapeake came down nearly before the wind, the Shannon, which had been waiting for her, filled and gathered steerage way; the Chesapeake rounded to on her weather-quarter at a distance of about fifty yards, and, as she ranged alongside, received the Shannon's broadside fired with the utmost coolness and deliberation, each gun as it bore. The effect was terrible; more than one hundred men were laid low, Lawrence himself mortally wounded. The return fire of the Chesapeake was wild in comparison, although, at the very short range, it was sufficiently deadly. But the Shannon's men were well disciplined and trained; those of the Chesapeake were newly raised, strangers to each other and to their officers. A panic spread amongst them, and after sustaining another broadside as deliberate as the first and as effective, the Chesapeake, having her tiller ropes shot away, drifted foul of the Shannon. Broke, calling out 'Follow me who can!' sprang on board, followed by some fifty or sixty of his men. The struggle was very short. The Americans, bewildered and panic-stricken, were beaten below without much difficulty. Broke was indeed most seriously wounded on the head by a blow from the butt-end of a musket; but within fifteen minutes from the time

of the first gun being fired by the Shannon the American colours on board the Chesapeake were hauled down, and the English colours hoisted in their stead.

The apparently easy capture of the Chesapeake, a ship of the same nominal force but larger, with more men and a heavier armament than the Shannon, created a remarkable sensation both in America and in England. The true significance of the action has been pointed out by a French writer of our own time. 'Captain Broke,' he says, 'had commanded the Shannon for nearly seven years; Captain Lawrence had commanded the Chesapeake for but a few days. The Shannon had cruised for eighteen months on the coast of America; the Chesapeake was newly out of harbour. The Shannon had a crew long accustomed to habits of strict obedience; the Chesapeake was manned by men who had just been engaged in mutiny. The Americans were wrong to accuse fortune on this occasion. Fortune was not fickle, she was merely logical. The Shannon captured the Chesapeake on 1 June 1813; but on 14 Sept. 1806, when he took command of his frigate, Captain Broke had begun to prepare the glorious termination to this bloody affair' (De la Gravière, *Guerres Maritimes*, ii. 272). This it is which constitutes Broke's true title to distinction; for the easy capture of the Chesapeake, which rendered him famous, was due to his care, forethought, and skill, much more than to that exuberant courage which caught the popular fancy, and which has handed down his name in the song familiar to every schoolboy as 'brave Broke.'

Honours and congratulations were showered upon him. He was made a baronet 25 Sept. 1813, and K.C.B. 3 Jan. 1815; but, with the exception of taking the Shannon home in the autumn of 1813, his brilliant exploit was the end of his active service. The terrible wound on the head had left him subject to nervous pains, which were much aggravated by a severe fall from his horse on 8 Aug. 1820, and although not exactly a valetudinarian, his health was far from robust, and his sufferings were at times intense. He became in course of seniority a rear-admiral on 22 July 1830, and died in London, whither he had gone for medical advice, on 2 Jan. 1841. His remains were carried to Broke Hall, and were interred in the parish church of Nacton. He had a numerous family, many members of which died young. The eldest son, who succeeded to the baronetcy, died unmarried in 1855; the fourth son, the present baronet (who has taken from his mother's family the name of Middleton), has no children, and at his death the title will become extinct. Two daughters of a still younger son are the sole representatives in the second generation of the captor of the Chesapeake; the younger of these is married to Sir Lambton Loraine, bart., captain R.N.; the other to the Hon. James St. Vincent Saumarez, eldest son of Lord de Saumarez, and grandson of the first lord, Nelson's companion in arms. Both have issue.

[Brighton's Memoir of Admiral Sir P. B. V. Broke, Bart., K.C.B., compiled 'chiefly from Journals and Letters in the possession of Rear-admiral Sir George Broke-Middleton, C.B.;' notes contributed by Sir George Broke-Middleton; Roosevelt's Naval War of 1812.] J. K. L.

BROKE or **BROOKE**, Sir RICHARD (*d.* 1529), chief baron of the exchequer, was fourth son of Thomas Broke of Leighton in Cheshire, and his wife, daughter and heiress of John Parker of Copnall. His ancestors had been Brokes of Leighton since the twelfth century, and came of a common stock with the Brookes of Norton. On 11 July 1510 (*Pat.* 2 *Hen. VIII*, p. 2, m. 2, and *S.B.*) he obtained a royal exemption from becoming serjeant-at-law, an honour then conferred only on barristers of at least sixteen years' practice at the bar. Perhaps he was deterred, as others had been (Dugdale, *Orig.* p. 110), by the great expenses attending the promotion; but he did not long avail himself of his privilege, he being one of the nine serjeants appointed in the following November. He was double reader in his inn, the Middle Temple, in the autumn of 1510, and must have passed his first readership before 1502, at which date Dugdale's list of readers commences. On 19 July 1510 he ceased to be under-sheriff on becoming recorder of London, an office he filled till 1520. Foss says he represented the city of London in the parliaments of 1511 and 1515, the returns of members to which parliaments are stated to be 'not found' in the House of Lords' Report. In the parliament of 1523 he was one of the triers of petitions. In June 1519 he appears as a junior justice of assize for the Norfolk circuit. He became a judge of the common pleas and knight in 1520 (fines levied Easter, 12 Hen. VIII), and chief baron of the exchequer on 24 Jan. 1526 (*Com. de Term. Hill.*, 17 Hen. VIII, Rot. 1), and continued in both offices till his death in May or June 1529. As serjeant, and afterwards as judge, his name appears in many commissions for the home and Norfolk circuits. His will, dated 6 May 1529, was proved on 2 July 1529 by his widow, daughter of —— Ledes, by whom he left three sons, Robert (afterwards of Nac-

ton), William, and John, and four daughters, Bridget, Cicely, Elizabeth (married —— Fouleshurst), and Margaret. Bridget had married George Fastolfe of Nacton, who died without issue in 1527, leaving his manors of Nacton, Cowhall, and Shullondhall, Suffolk, to her, with remainder to her father and his heirs, who thus became Brokes of Nacton. Sir Richard left property in Norfolk, Kent, Surrey, and Sussex. A direct descendant, Robert Broke of Nacton, was created baronet in 1661, and died without male issue in 1693, when the estates passed to his nephew Robert, grandfather of Admiral Sir Philip Bowes Vere Broke [q. v.]

[Foss's Lives of the Judges; Dugdale's Orig. Jurid. p. 215, and Chronica Series, pp. 79, 80; Ormerod's Cheshire, iii. 241; Harl. MS. 1560, 317 *b*; Cal. State Papers, Hen. VIII, vols. i.-iv.; Noorthouck's London, p. 893 Add.; Stow's Survey; Broke's will in Somerset House.]

R. H. B.

BROKE or **BROOKE**, SIR ROBERT (*d.* 1558), speaker of the House of Commons and chief justice of the common pleas, was the son of Thomas Broke of Claverley, Shropshire, by his wife Margaret, daughter of Hugh Grosvenor of Farmcote Hall in the same county. He was admitted B.A. at Oxford 8 July 1521 (*Oxf. Univ. Reg.* ed. Boase, i. 111). He afterwards studied at the Middle Temple, where in 1542 he was elected autumn reader, and in Lent 1551 double reader. He held successively the offices of common serjeant (1536-1545) and recorder of London (1545-1554), and represented the city in the three parliaments of 1547, 1553, and 1554. On 17 Oct. 1552 he was made a serjeant-at-law. On 2 April 1554, while still recorder, he was chosen speaker of the House of Commons. The second parliament of Queen Mary, over which he was elected to preside, was declared in the opening speech of the chancellor (Bishop Gardiner) to be called 'for the corroboration of true religion, and touching the queen's highness's most noble marriage.' Broke was 'a zealous catholic,' and his conduct as speaker gave great satisfaction to the queen. He was appointed chief justice of the common pleas on 8 Oct. 1554 (Wood erroneously gives the date as 1553), and on 27 Jan. following was knighted by King Philip. On 26 Feb. 1556-7 he sat in the court which was appointed to try Charles, lord Stourton, for the murder of the Hartgills, and it is mentioned in Machyn's 'Diary' that, the prisoner having obstinately refused to plead, the lord chief justice at last rose and threatened him with the punishment of being pressed to death, upon which he pleaded guilty. Broke died on 6 Sept. 1558 while on a visit to his friends, at Claverley, his native place, and is buried in the chancel of the parish church there. In the 'Gentleman's Magazine' (xcii. pt. ii. 490) is a description of his monument at Claverley, with a copy of the inscription, which states that he was twice married, and had seventeen children. According to Wood he left to his descendants 'a fair estate at Madeley in Shropshire, and one or two places in Suffolk.' The mention of Suffolk, however, is probably a mistake; Wood was apparently thinking of the Broke family of Nacton, who derived their descent from Sir Richard Broke [q. v.] The same writer informs us that Sir Robert Broke, by his will proved 12 Oct. 1558, made several bequests to the church and poor of Putney.

Broke was held in great respect as a learned and upright judge, and also obtained a high reputation as a legal writer. The following is a list of his works, none of which seem to have been published during the author's lifetime: 1. 'La Graunde Abridgement,' 1568. This is an abstract of the year-books down to the writer's own time, and is principally based on the work by Fitzherbert bearing the same title. Broke's treatise, however, is considered superior in lucidity of arrangement to that of Fitzherbert, and contains also some valuable original matter. Sir E. Coke and other eminent legal authorities have praised it highly. Further editions were published in 1570, 1573, 1576, and 1586. A selection from the 'Abridgement,' comprising the more recent cases which Broke had added to Fitzherbert's collection, was published in 1578, under the title of 'Ascuns novell Cases de les Ans et Temps le Roy Henry VIII, Edward VI, et la Roygne Mary, escrie ex la Graunde Abridgement.' This volume was reprinted in 1587, 1604, and 1625. It was translated into English by J. March ('Some New Cases of the Years and Times of King Henry VIII, Edward VI, and Queen Mary,' 1651), and an edition of this translation, together with the original Norman-French, was published in 1873. 2. 'A Reading on the Statute of Limitations,' 1647. 3. 'A Reading upon the Statute of Magna Charta, cap. 16,' 1641. This work is erroneously attributed by Wood to another Robert Brooke, who died in 1597, although the title-page gives to the author the designations of serjeant-at-law and recorder of London, which clearly identify him with the subject of this article.

[Wood's Athenæ Oxon. ed. Bliss, i. 267; Machyn's Diary, 27, 126; Journals of the House of Commons, i. 33; Dugdale's Orig. Jurid. 216, 217; Harl. MS. 6064, 80 *b*; Foss's Lives of the Judges, v. 360; Gent. Mag. xcii. pt. ii. 490.] H. B.

BROKE or BROOK, THOMAS (*fl.* 1550), translator, was an alderman of Calais, the chief clerk of the exchequer and customer there at the time when the preaching of William Smith at Our Lady's Church in that town led many persons, and Broke among them, to adopt 'reformed' opinions. Broke was a member of parliament, sitting probably for Calais, and in July 1539 spoke strongly against the Six Articles Bill, though Cromwell sent to warn him to forbear doing so as he loved his life. Part of his speech is preserved by Foxe (*Acts and Monuments*, v. 503). He was roughly answered by Sir William Kingston, comptroller of the king's household, who was reproved by the speaker for his attempt to interfere with the freedom of debate. The next month, at the trial of Hare, a soldier of Calais, for heresy, Broke interfered on the prisoner's behalf, and was rebuked by the dean of arches. Half an hour later he found himself accused of the same crime on the information of the council of Calais, and on 10 Aug. was committed to the Fleet along with John Butler, a priest of the same town, who was also a 'sacramentary.' As, however, the Calais witnesses could prove nothing against him, he was released. In 1540, 32 Henry VIII, the king demised two chapels in the parish of Monkton, in the liberty of the Cinque Ports, to a Thomas Broke for 42*l.* 7*s.* 11*d.* (Hasted, *Kent*, iv. 340 *n.*) As Broke the translator was paymaster of Dover in 1549 (see below), it is at least possible that he was the lessee. Another attempt was made against Broke in the spring of 1540. His servant was imprisoned by the council of Calais and strictly examined as to his master's conduct, and 'the second Monday after Easter' Broke was committed to the mayor's gaol, 'whither no man of his calling was ever committed unless sentence of death had first been pronounced upon him;' for otherwise he should have been imprisoned in a brother alderman's house. All his goods were seized, and his wife and children thrust into a mean part of his house by Sir Edward Kingston. Indignant at such treatment, Mistress Broke answered a threat of Kingston's with 'Well, sir, well, the king's slaughter-house had wrong when you were made a gentleman' (Foxe, v. 576). She wrote to complain to Cromwell and to other friends, and, finding that her letters were seized by the council, sent a secret messenger to England to carry the news of the sufferings of her husband and of those imprisoned with him. On receiving her message, Cromwell ordered that the prisoners should be sent over for trial, and on Mayday they were led through the streets of Calais, Broke being in irons as the 'chief captain' of the rest. Broke was committed to the Fleet, and lay there for about two years. At the end of that time he and his twelve companions were released 'in very poor estate.' In 1550 the name of Thomas Broke occurs among the chief sectaries of Kent. Although from the character of his literary work it is impossible to suppose that Broke the translator could have been one of the 'Anabaptists and Pelagians' spoken of by Strype (*Memorials*, II. i. 369), yet if, as seems likely, he was dissatisfied with the new Book of Common Prayer, he may have belonged to a separate congregation, and so have been described as sharing the opinions of the majority of the sectaries of the district. His works are: 1. 'Certeyn Meditacions and Things to be had in Remembraunce . . . by euery Christian before he receiue the Sacrament of the Body and Bloude of Christ, compiled by T. Broke,' 1548. 2. 'Of the Life and Conuersacion of a Christen Man . . . wrytten in the Latin tonge by Maister John Caluyne. . . . Translated into English by Thomas Broke, Esquire, Paymaster of Douer,' 1549. In the prologue of this translation the identity of Broke with the alderman of Calais is made clear. 'I have (good reader),' he writes, 'translated a good part more of the institution of a Christen man, wrytten by this noble clerke which I cannot nowe put in printe, partly through mine owne busynes as well at Douer as at Calleis.' 3. The preface to 'Geneua. The Forme of Common Praiers used in the Churches of Geneua . . . made by Master John Caluyne. . . . Certayne Graces be added in the ende to the prayse of God, to be sayde before or after meals,' 1550. An imperfect copy of this rare 12mo, printed by E. Whitchurch, is described in Herbert's 'Ames' (p. 547). To the beautiful copy in the Grenville Library in the British Museum is appended a note in Grenville's handwriting, in which he calls attention to its perfect condition, and declares his belief that it is the only copy extant. In his preface Broke says that the graces are his, and that perhaps some will find them over-long; the first is a paraphrase of the Ten Commandments. He also makes another mention of his further translation from Calvin's 'Institution' which he had ready and was about to put forth. If this was ever printed, it appears to have left no sign of its existence. E. Whitchurch had printed the English Liturgy the year before, and this translation of the Genevan form seems to indicate a desire that changes should be made in it so as to bring it nearer to the practices of the Calvinistic congregations

abroad. 4. 'A Reply to a Libell cast abroad in defence of D. Ed. Boner, by T. Brooke,' no date.

BROKESBY or BROOKESBUY, FRANCIS (1637–1714), nonjuror, the son of Obadiah Brokesby, a gentleman of independent fortune, of Stoke Golding, Leicestershire, and his wife Elizabeth, daughter of James Pratt, Wellingborough, Northamptonshire, was born on 29 Sept. 1637. His uncle Nathaniel was a schoolmaster. As all the nine children of his grandfather Francis received scriptural names, it is probable that he came of a puritan stock. He became a member and afterwards a fellow of Trinity College, Cambridge, taking the degree of B.D. in 1666. A religious poem of some beauty composed by him on the occasion of his taking his degree illustrates the fervent piety of his character. This poem is preserved in Nichols's 'History and Antiquities of Hinckley,' 737. He probably took orders early, for on the presentation of his college he succeeded John Warren, the ejected rector of Broad-oak, Essex. He lived on friendly terms with his predecessor, who used to come and hear him preach (Palmer, *Nonconformists' Memorial*, ii. 202). In 1670 he left Broad-oak, and became rector of Rowley in the East Riding of Yorkshire. Soon after he entered on this new cure he married Isabella, daughter of a Mr. Wood of Kingston-upon-Hull. From about this time onwards he used to write in his pocket-books short Latin memoranda on the incidents of his daily life. Several specimens of these memoranda have been preserved (Nichols, *Hinckley*, 736–40). Though they give some idea of his peculiar piety, they are for the most part concerned with domestic matters. During his incumbency at Rowley he appears to have been involved in several disputes and lawsuits about tithes. He refers to these disputes in his memoranda of 1678 and 1680; on 31 July 1683 he enters a thanksgiving for the successful issue of a suit, and in the same year registers a vow that if he gains a cause then pending he will devote half the tithe so recovered to the relief of the poor. When the revolution of 1688 set William and Mary on the throne, Brokesby refused to take the oath to the new sovereigns. He was accordingly deprived of his living in 1690. He went up to London in July, and appears to have been received by Lady Fairborn at her house in Pall Mall 'over against the Pastures.' Meanwhile his wife, by that time the mother of six children, did what she could to wind up affairs. Writing to her sister on 8 Aug., she says, 'We are now cutting down our corn, for we cannot sell it.' After his deprivation Brokesby lived for some years in his native village, and there his wife died and was buried on 26 Feb. 1699.

Brokesby's private property seems to have been small. His high character and his reputation as a scholar gained him many friends among the men of his own party. Chief among these was Francis Cherry of Shottesbrooke, Berkshire, to whose liberal kindness Thomas Hearne and many other nonjurors were indebted. After his wife's death Brokesby appears to have resided constantly at Shottesbrooke, and early in 1706 succeeded Mr. Gilbert of St. John's College, Oxford, as chaplain to the little society of nonjurors established there (Hearne, *Collections*, i. 211). He travelled about a good deal, and generally paid a yearly round of visits in the north of England, probably to the men of his own party, occasionally also going up to Oxford and London. At Shottesbrooke he enjoyed the society of Robert Nelson, to whom he rendered valuable assistance in the compilation of his book on the 'Festivals and Fasts of the Church.' There, too, he formed a strong friendship with Henry Dodwell, sometime Camden professor of history at Oxford. In common with some other moderate nonjurors, Brokesby refused to take the oath simply because his conscience forbade him to do so, and not as a matter of politics. If James were dead, he declared that he would have no objection to swear allegiance to William and Mary, because they would be in possession, while the claim of the Prince of Wales would be 'dubious' (Nichols, 740). The death of James, however, was followed by the oath of abjuration, and neither Brokesby nor his friends were prepared to declare that the kingship of William of Orange was founded on right. At the same time, while he warmly upheld the cause of the deprived bishops, ecclesiastical division was grievous to him, and he fully shared in the opinion expressed in Dodwell's work, 'The Case in View,' that on the death or resignation of these bishops their party might return to the national communion. The

case contemplated by Dodwell became a fact when the death of Bishop Lloyd on 1 Jan. 1710 was followed by the resignation of Bishop Ken, and accordingly Brokesby, Dodwell, and Nelson returned to the communion of the established church, and attended service at Shottesbrooke Church on 28 Feb. (MARSHALL, *Defence of our Constitution*, app. iv. and vi.) A letter from S. Parker of Oxford, dated 12 Nov. (*Gent. Mag.* 1799, vol. lxix. pt. i.), appears to have called forth a reply dated 18 Nov., in which Brokesby shows that 'the new bishops' were merely suffragans, that no synodical denunciation had invested them with independent authority after the deaths of the deprived diocesans, that the 'deprived fathers' had no power to invest them with such authority, and that therefore they were not diocesan bishops (MARSHALL, app. xi.) Brokesby, then, had no part in what may be described as the schism of the nonjurors. He lost his friend Dodwell in 1711, and the next year he describes himself in his will, dated 15 Sept. 1712, as sojourning at Hinckley. He was then in good health. The death of Francis Cherry in 1713 caused him deep grief. He died at Hinckley, and was buried at Stoke on 24 Oct. 1714. Of his six children his elder son Francis died in early life, and his younger son, who became a merchant, also died before him. His four daughters survived him; the second, Dorothy, married Samuel Parr, vicar of Hinckley, and was thus the grandmother of Dr. Samuel Parr, the famous Greek scholar. Brokesby was the author of: 1. 'Some Proposals towards promoting the Propagation of the Gospel in our American Plantations,' 1708, 8vo. 2. A tract entitled 'Of Education with respect to Grammar Schools and the Universities, to which is annexed a Letter of Advice to a Young Gentleman. By F. B., B.D.,' 1701, 12mo. 3. 'A Letter containing an Account of some Observations relating to the Antiquities and Natural History of England,' 16 May 1711, in Hearne's 'Leland's Itinerary,' vi. preface, and 89–107, ed. 1744. 4. 'An History of the Government of the Primitive Church for the first three centuries and the beginning of the fourth . . . wherein also the Suggestions of David Blondel . . . are considered,' 1712, 8vo. 5. 'The Divine Right of Church Government by Bishops asserted,' 1714, 8vo. 6. 'The Life of Mr. Henry Dodwell, with an Account of his Work . . .,' 2 vols. 1715, 8vo. In this work, which was published after the author's death, he speaks (p. 311) of the help Dodwell had given him in preparing his book on church government. 7. Various Letters.

BROME, ADAM DE (*d.* 1332), founder of Oriel College, Oxford, of whose early life nothing is known, was rector of Hanworth in Middlesex in 1315, chancellor of Durham in 1316, archdeacon of Stow in 1319, and in the same year was made vicar of St. Mary in Oxford. He was also a clerk in chancery and almoner of Edward II. In 1324 he received the royal license to purchase a messuage and found a college in Oxford to the honour of the Virgin Mary. He obtained several benefactions from Edward II for his new foundation, which was to consist of a provost and ten fellows or scholars, who were to devote themselves to the study of divinity, logic, or law. He was appointed the first provost by the king in 1325, and drafted his statutes in the following year. The statutes bear a close resemblance to those which Walter de Merton had framed for Merton College. Brome died in June 1332, and was buried in St. Mary's Church, Oxford.

[Wood's Colleges and Halls (Gutch), 122, &c.; Statutes of Oriel College, in Statutes of Colleges of Oxford (1853), vol. i.] M. C.

BROME, ALEXANDER (1620–1666), poet, born in 1620, was an attorney in the lord mayor's court, according to Langbaine, and in the court of king's bench, according to Richard Smith's 'Obituary,' published by the Camden Society. During the civil wars he distinguished himself by his attachment to the royalist cause, and was the author of many songs and epigrams in ridicule of the Rump. In 1653 he edited, in an 8vo volume, 'Five New Playes' by Richard Brome [q.v.] (to whom he was not related), and in 1659 five more 'New Playes,' 1 vol. 8vo. He published, in 1654, a comedy of his own, entitled 'The Cunning Lovers.' His 'Songs and Poems' were collected in 1661, 8vo, with commendatory verses by Izaak Walton and others, and a dedication to Sir J. Robinson, lieutenant of the Tower. The second edition, 'corrected and enlarged,' appeared in 1664.

To this edition are prefixed a prose commendatory letter signed 'R. B.' (probably the initials of Richard Brathwaite), additional verses by Charles Strynings and Valentine Oldys, and a prose letter signed 'T. H.' Among the new poems in this edition are an epistle 'To his friend Thomas Stanley, Esq., on his Odes,' and 'Cromwell's Panegyrick.' A third edition, with a few additional poems and with elegies by Charles Cotton and Richard Newcourt, appeared in 1668, 8vo. Brome was a spirited song-writer, and his bacchanalian lyrics have always the true ring. Phillips, in his 'Theatrum Poetarum,' says that he 'was of so jovial a strain that among the sons of Mirth and Bacchus, to whom his sack-inspired songs have been so often sung to the spritely violin, his name cannot choose but be immortal; and in this respect he may well be styled the English Anacreon.' His satirical pieces are sprightly without being offensively gross. Brome was a contributor to, and editor of, a variorum translation of Horace, published in 1666. He had formed the intention of translating Lucretius, as we learn from an epigram of Sir Aston Cokaine (*Poems*, p. 204); but he did not carry out his project. Commendatory poems by Brome are prefixed to the first folio edition of Beaumont and Fletcher's works (1647), and to the second edition of Walton's 'Angler,' 1655. He died on 30 June 1666. An Alexander Brome, who died before 25 Sept. 1666, was a member of the New River Company. There are songs of Brome's in 'Wit's Interpreter,' 'Wit restored,' 'Wit and Drollery,' 'Westminster Drollery,' 'The Rump,' and other collections. The 'Covent Garden Drollery,' 1671, edited by A. B., has been wrongly attributed to Brome.

[Corser's Collectanea Anglo-Poetica, iii. 114–119; Langbaine's Dramatic Poets with Oldys's MS. annotations; Phillips's Theatrum Poetarum, 1675.] A. H. B.

BROME, JAMES (*d.* 1719), author of two books of travels, was ordained rector of Cheriton, Kent, on 9 June 1676, and became vicar of the adjoining parish of Newington in 1677. He was also chaplain to the Cinque Ports. In 1694 there appeared 'Historical Account of Mr. R. Rogers's three years' Travels over England and Wales,' and in 1700 Brome published under his own name 'Travels over England, Scotland, and Wales.' He stated in the preface that it had only lately come to his notice that his own 'Travels' had stolen, in an imperfect and erroneous form, into the world as the travels of Mr. Rogers, and that he had been forced to publish an authentic version in self-defence. A second edition appeared in 1707. Another book of travels by Brome appeared in 1712, under the title 'Travels through Portugal, Spain, and Italy.' He also published in 1693 William Somner's 'Treatise of the Roman Ports and Forts in Kent,' and he is the author of several single sermons published. He died in 1719.

[Hasted's Kent, iii. 392, 399; Brit. Mus. Cat.; Watt's Bibl. Brit.; Notes and Queries, 3rd series, iii. 49.] T. F. H.

BROME, RICHARD (*d.* 1652?), dramatist, is thought to have died in 1652 (when his last play was published with a dedication from his own hand), and was certainly dead in 1653 (see Alexander Brome 'To the Readers,' *Works*, i. 2). Nothing, or next to nothing, is known as to the date of his birth. In the prologue to the 'Court Beggar,' acted 1632, he speaks of himself as 'the poet full of age and cares.' His surname, which is punned on by Cokaine ('Wee'l change our faded Broom to deathless Baies'), and daringly associated by Alexander Brome [q. v.] with Plantagenet ('Twas *Royall* once, but now 'twill be Divine'), furnishes no clue as to his origin. He was no relation either of the dramatist, Alexander Brome, who brought out several of his plays ('though not related to thy parts or person'), or of the 'stationer,' Henry Brome, who published others of Richard's dramas. A certain 'St. Br.,' however, is found addressing some verses 'to his ingenious brother, Mr. Richard Brome, upon this witty issue of his brain, "The Northern Lasse."' Probably his birth was as humble as was his condition of life. Alexander Brome, in the lines prefixed by him to the 'Five New Playes' of Richard, which he published in 1659, asserts of him that 'poor he came into th' world and poor went out.' But the surest testimony to his lowliness of origin lies in the fact that in his earlier days he was servant to Ben Jonson. (See Jonson's lines 'To my faithful servant and (by his continued virtue) my loving friend, the author of this work ['The Northern Lass'], Master Richard Brome, 1632,' beginning—

I had you for a servant once, Dick Brome;

and reprinted in Jonson's 'Underwoods.') Brome must have been in Jonson's service as early as 1614, for he is mentioned by name as the poet's 'man' in the induction to 'Bartholomew Fair' (acted 31 Oct. 1614). At what time between this and 1632 the relation of master and servant was exchanged for that of mutual friendly attachment is unknown. But this latter bond seems to have remained unbroken till Jonson's death. Gifford has shown that something like an attempt to

create an hostility on Jonson's part towards his disciple was made by Randolph and others. After the failure of Jonson's 'New Inn,' 1629, the angry poet shook the dust of the stage off his heels in an angry 'Ode [to Himself].' To this several of the younger poets replied from various points of view, among them Randolph in a parody full of homage, which contains these lines—

> And let these things in plush,
> Till they be taught to blush,
> Like what they will, and more contented be
> With what Brome swept from thee.

And, in a 12mo edition of Jonson's minor poems, published about three years after his death, the 'Ode [to Himself]' was reprinted with certain new readings foisted in; among the rest, in the lines

> There, sweepings do as well
> As the best-ordered meal,

the alteration '*Brome's* sweepings' was introduced. Gifford states that very shortly after the condemnation of the 'New Inn' Brome had brought out a successful piece, now lost; and it is certain that not long afterwards he produced the very successful 'Northern Lass,' which, as has been seen, Jonson hailed with unstinted praise (see JONSON'S *Works*, ed. Gifford, v. 449). Brome's earliest dramatic attempt, or one of his earliest, was a comedy called 'A Fault in Friendship,' written by him in conjunction with Jonson's eldest son, Benjamin, and acted at the Curtain Theatre in 1623 (HALLIWELL, 95).

His connection with Jonson made Brome what he was. Frequent allusion to it is made by other writers (see Shirley's and John Hall's lines on the 'Jovial Crew,' and 'C. G.'s' on the 'Antipodes'), and Brome himself refers to it with pride (see prologue to the 'City Wit'), and speaks with reverence of Jonson himself (see, besides the lines in memory of Fletcher, those to the Earl of Newcastle on his play called 'The Variety,' prefixed to the 'Weeding of the Covent Garden'). But, if we may judge chiefly from the commendatory verses accompanying several of his plays, Brome was likewise on good terms with other more or less eminent dramatists. Among the verses prefixed to the works of Beaumont and Fletcher is a lengthy copy by Brome, in which he describes himself as having known Fletcher

> in his strength; even then, when he
> That was the master of his art and me,
> Most knowing Jonson (proud to call him son),

declared himself surpassed by the younger writer (DYCE, *Beaumont and Fletcher*, 8vo, i. lxiii–lxv). Thomas Dekker, notwithstanding his quarrel with Jonson, addresses verses 'to my sonne Broom and his *Lasse*;' John Ford, on the occasion of the same play, writes as 'the author's very friend;' Shirley praises the 'Jovial Crew,' characteristically insisting that something besides university learning goes to the making of a good play. Of the younger dramatic writers Sir Aston Cokaine (see his *præludium* to Mr. Richard Brome's 'Five New Playes,' 1653), John Tatham (verses on the 'Jovial Crew'), Robert Chamberlain (on the 'Antipodes'), and T[homas] S[hadwell] (To Alexander Brome on Richard Brome's 'Five New Playes,' 1659) do honour to him or to his memory. Nor, to judge from the dedications of his plays, was he without patrons; to the celebrated Earl (afterwards Duke) of Newcastle, whom he complimented on his play called 'The Variety,' he dedicated the 'Sparagus Garden;' to the Earl of Hertford (afterwards Duke of Somerset, who succeeded Newcastle as governor to the Prince of Wales) the 'Antipodes;' and other plays to the learned Thomas Stanley and a gentleman of the name of Richard Holford. Evidently, however, he courted the applause of the general public rather than the favour of particular individuals, and had too genuine a dislike of dilettantism in play-writing to be a hanger-on upon great people who dabbled in the art like Newcastle or loved a book above all exercises like Hertford. Among the theatres for which he wrote were the Globe and Blackfriars (the king's company), and the Cockpit in Drury Lane and Salisbury Court in Fleet Street (the queen's players). For William Beeston, who, about the time of the production of Brome's 'Antipodes' at Salisbury Court, began to play with a company of boys at the Cockpit, Brome seems to have had a special regard (see the *envoi* at the end of the 'Antipodes,' and the curious passage in the epilogue to the 'Court Beggar,' which we cannot, with Mr. J. A. Symonds, interpret as referring to Jonson; cf. COLLIER, *Annals of the Stage*, new edition, ii. 16 seq., and iii. 138–9).

Of Richard Brome's personal character we learn hardly more than what is implied in Jonson's praise. Alexander Brome, in his 'Verses to the Stationer' on the 'Five New Playes' (1653), informs us that Richard was a devout believer. This will not be thought unreconcilable with his hatred of Scotch presbyterians (see the 'Court Beggar') and of puritans in general (see 'Covent Garden weeded'). He appears to have acquired a certain amount of learning, for he makes some show of classical knowledge (see the

'Court Beggar'), and perhaps knew a little German. In the 'Novella' a leading incident is borrowed from an Italian novelist, or his French translator (see Collier's note to J. Killigrew's 'Parson's Wedding' in Dodsley's *Old English Plays*, ed. W. C. Hazlitt, xiv. 480). But, at least after his great master had 'made him free o' the trade,' his powers seem to have been completely absorbed by his profession as a playwright. As to this profession or craft he had, as Jonson wrote,

> learn'd it well and for it serv'd his time,
> A prentiship, which few do now adayes;

he was content to be called a playmaker, instead of author or poet (see prologue to the 'Damoiselle'); on the other hand he had a genuine, unsophisticated love of a good play and a good player (see a capital passage in the 'Antipodes,' i. 5), and was so ready to encourage anything making for theatrical success, that he could not even bring himself to disapprove of effective 'gag' (see *ib.* ii. 1). Delighting in his line of work, but neither able, nor as a rule willing, to go beyond it, Brome exhibits a characteristic mixture of self-consciousness and modesty (see the prologues to the 'Northern Lass' and the 'Queen's Exchange'). He lays claim to 'venting none but his own' (epilogue to the 'Court Beggar'); he merely pretends to mirth and sense, and aims only to gain laughter; so that those who look for more must go among the classicising 'poet-bounces' (prologue to the 'Novella'): what he has to show is a slight piece of mirth; 'yet such were writ by our great masters of the stage and wit,' before 'the new strayne of wit' and gaudy decorations came into fashion (prologue to the 'Court Beggar'). 'Opinion' is a thing which he cannot court (prologue to the 'Antipodes'); yet at another time he is ready to take the judgment of the public (epilogue to the 'English Moor'), and can appeal to his 'wonted modesty' (prologue to the 'Sparagus Garden'). All this need not be taken very literally, more especially in one whose ideas were not always quite large enough for the spacious phrases of Ben Jonson. But (and this is the interesting feature in Brome) he was really a conscientious workman who achieved such success as fell to his lot by genuine devotion to his task. Most certainly he was not a poet, though on one occasion he bursts forth into a praise of poetry which has unmistakable fire and distantly recalls a famous passage in Spenser ('Sparagus Garden,' iii. 5). Nor can he even be called an original writer. To Jonson he owes his general conception of comedy, his notion of 'humorous' characters (such as Sir Arthur Mendicant in the 'Court Beggar,' 'Master Widgine, a Cockney Gentleman,' in the 'Northern Lass,' the pedant Sarpego and the female characters in the 'City Wit,' Crossewill in 'Covent Garden weeded,' Garrula and Geron with his 'whilome' citations in the 'Love-sick Court'), and his profuse display of out-of-the-way learning or knowledge (see the vagabond's *argot* in the 'Jovial Crew,' the military terms in 'Covent Garden weeded,' v. 3, and the enumeration of dances in the 'New Academy,' iii. 2). He naturally here and there refers to favourite Jonsonian characters (to Justice Adam Overdo in 'Covent Garden weeded,' i. 1, and to 'Subtle and his lungs' in the 'Sparagus Garden,' ii. 2). It would be unfair to say that he owes anything of much importance to any other writer, unless it be to Massinger, who may have influenced his graver efforts (e.g. in the 'Love-sick Court' and the 'Queen and Concubine'). With Thomas Heywood he was associated in the authorship of the 'Late Lancashire Witches,' printed 1634, and written in connection with a trial for witchcraft held in 1633 in the forest of Pendle in Lancashire, already notorious for witchcraft (see the play in Heywood's *Dramatic Works* (1874), vol. iv.; and cf. Ward's *English Dramatic Literature*, ii. 121–3), and perhaps of other dramas. He twice alludes to Robert Greene, but not as a dramatist. Among the plays of Shakespeare (who is mentioned with others by name in the 'Antipodes,' i. 5), 'A Winter's Tale' and 'Henry VIII,' perhaps also 'King Lear,' contributed hints for the 'Queen and Concubine;' and 'King Lear' and 'Macbeth' for the 'Queen's Exchange.' The 'Two Noble Kinsmen' cannot have been out of Brome's mind when he wrote the 'Love-sick Court,' which has a romantic, monarchical flavour and contains some curious allusions to the politics of the period preceding the civil war; while the 'Beggar's Bush' of Fletcher is most likely to have suggested the notion of the 'Jovial Crew, or the Merry Beggars.' (To the 'Knight of the Burning Pestle' Brome refers in the 'Sparagus Garden,' iii. 2.) He is at times an effective constructor of plots, but this he owed to long experience and to excessive pains (see the 'Love-sick Court,' the 'New Academy,' and more especially the 'Queen and Concubine' and the 'Queen's Exchange').

Of his plays some may be described as comedies of actual life, moulded in the main on the example of Jonson; others as romantic comedies, in which the interest chiefly

depends on the incidents of the action. The two species are, however, anything but strictly kept asunder, just as the rough verse in which the latter kind is chiefly written is intermingled in the comedies of life with prose in varying proportions, or altogether dropped. Of these comedies of actual life the best example is perhaps the 'Jovial Crew' (of which a good criticism will be found in an article on Brome's plays by Mr. J. A. Symonds in the 'Academy,' 21 March 1874). This clever picture of a queer section of society, with a breath of country air (not maybe of the very purest sort) blowing through it, was the latest of Brome's dramas, having 'the luck to tumble last of all in the epidemicall ruin of the scene' (see Dedication). It has also had the luck to enjoy a long life on the stage, having been revived after the Restoration (see PEPYS's *Diary*, s.d. 27 Aug. 1661) and again in 1731 as an 'opera' (probably in consequence of the popularity enjoyed by the 'Beggar's Opera,' produced 1728), and performed as late as 1791 (GENEST). The most successful, however, of Brome's plays seems to have been the 'Northern Lass,' which was one of his earliest productions, and had before its publication been 'often acted, with good applause, at the Globe and Blackfriars.' It contains a pathetic character (Constance) whose northern dialect seems, in the opinion of the public, to have imparted to her love-lorn insanity an original flavour which it is difficult to discover either in the character or in the scheme of the action. It seems to have been revived after the Restoration (see GENEST, i. 422). A play of more real cleverness and more essentially in the Jonsonian manner (it was very probably suggested by Jonson's masque, the 'World in the Moon,' 1620) was the 'Antipodes.' The 'play within the play,' on which the main interest of this piece turns, is an amusing extravaganza exhibiting the world upside down; and the comedy derives an exceptional literary interest from the remarks on the theatre occurring in it. The 'Sparagus Garden,' produced in 1635, seems likewise to have been exceptionally popular (if we are to suppose it to be referred to as 'Tom Hoyden o' Taunton Dean' in the epilogue to the 'Court Beggar,' but Halliwell (249) seems to think this a separate play); here it need only be mentioned as an example of the consistent and unredeemed grossness of Brome's 'mirth,' and (inasmuch as the play has an air of truthfulness about it) as one among many indications of the fact that in point of morals there was not much to choose between the London world of Charles II's reign and that of his father's. Finally, the 'Weeding of Covent Garden, or the Middlesex Justice of Peace,' a picture of manners on the 'Bartholomew Fair' model, is worth noticing as a direct attempt at promoting a definite social reform, which appears to have been remarkably successful (see 'Another Prologue,' prefixed to the play). Among the romantic comedies the 'Love-sick Court' and the 'Queen and Concubine' are most worthy of mention; in the last-named Jeffrey is a good fool. In the following list of Brome's plays dates are given as far as ascertainable, but no attempt is made to establish a chronological sequence: 1. 'A Mad Couple well matched;' comedy in prose. Perhaps the same as 'A Mad Couple well met,' mentioned in a list of plays belonging to the Cockpit company in 1639 (HALLIWELL). According to Genest (i. 207) this comedy was reproduced in 1677, as 'revised' by Mrs. Aphra Behn. (See also PEPYS's *Diary*, s.d. 20 Sept. and 28 Dec. 1667.) 2. 'The Novella;' romantic comedy in verse. Acted at Blackfriars, 1632. 3. 'The Court Beggar;' comedy in verse and prose. Acted at the Cockpit, 1632. If the epilogue following this was the original epilogue, this play was written after the 'Antipodes' and the 'Sparagus Garden.' 4. 'The City Wit, or the Woman wears the Breeches;' comedy, mainly in prose. 5. 'The Damoiselle, or the New Ordinary;' comedy, mainly in verse. Halliwell thinks this was one of the author's earliest productions. The above were published in one 8vo volume, by the care of Alexander Brome, in 1653, under the title of 'Five New Playes by Richard Brome.' 6. 'The English Moor, or the Mock Marriage;' comedy, mainly in verse; 'often acted with general applause by his majesty's servants.' According to Halliwell, a manuscript copy of this play is in the library of Lichfield Cathedral. 7. 'The Love-sick Court, or the Ambitious Politique;' romantic comedy in verse. 8. 'The Weeding of the Covent Garden, or the Middlesex Justice of Peace;' 'a facetious comedy,' mainly in prose. 9. 'The New Academy, or the New Exchange;' comedy, mainly in verse. 10. 'The Queen and Concubine;' romantic comedy, mainly in verse. The above were likewise published in one 8vo volume, by the care of Alexander Brome, in 1659, under the same title as the 1653 volume. 11. 'The Northern Lass;' comedy, mostly in prose. First printed, 4to, 1632; reprinted, 4to, 1684, with a new prologue by J. Haynes, and an epilogue; and again, 4to, 1706, new songs being added, of which the music was composed by Daniel Purcell (HALLIWELL). 12. 'The Sparagus

Garden;' comedy, mainly in prose. Acted, 1635, by the Company of Revels at Salisbury Court; first printed, 4to, 1640. 13. 'The Antipodes;' comedy in verse. Acted, 1638, by the queen's majesty's servants at Salisbury Court; first printed, 4to, 1640. It was revived in 1661 (PEPYS). 14. 'A Jovial Crew, or the Merry Beggars;' comedy, mainly in prose, with verse. Acted, 1641, at the Cockpit; first printed, 4to, 1652, with a dedication to Thomas Stanley from the author; reprinted, 1684, 1686. It will be found in vol. x. of the 2nd edition (1780) of Dodsley's 'Old Plays.' Of the 'comic opera' an edition of 1760 is extant, and there are doubtless others. 15. 'The Queen's Exchange;' romantic comedy, mainly in verse, with numerous rhymes. Acted at Blackfriars; first printed, 4to, 1657; afterwards printed, 4to, 1661, under the title of 'The Royal Exchange.' Of all these fifteen plays a reprint in 3 vols. 8vo was published in 1873, which piously preserves, together with the old spelling, all the misprints and the monstrous arrangement of the 'verse.' Prefixed to vol. i. is a portrait authenticated by Alexander Brome, and canopied by the laureate's wreath, which the modest playwright expressly deprecated (see the prologue to the 'Damoiselle'). 16 (?). 'Tom Hoyden o' Taunton Dean,' if a distinct comedy or farce, was produced before the epilogue to the 'Court Beggar' was written (*v. ante*). The three following plays were entered in Richard Brome's name on the books of the Stationers' Company at the dates appended (see HALLIWELL): 17. 'Christianetta,' 4 Aug. 1640; probably not printed. 18. 'The Jewish Gentleman,' 4 Aug. 1640; not printed. 19. 'The Love-sick Maid, or the Honour of Young Ladies,' 9 Sept. 1653. Acted at court, 1629; not printed. 20 (?). 'Wit in a Madness.' This play was entered on the Stationers' books 19 March 1639, together with the 'Sparagus Garden' and the 'Antipodes,' and was probably by the same author (HALLIWELL); not printed (?). As already seen, Brome wrote together with Benjamin Jonson the younger a comedy called: 21. 'A Fault in Friendship,' mentioned by Sir Henry Herbert, s. d. 2 Oct. 1623 (HALLIWELL). With Thomas Heywood he wrote: 22. 'The Lancashire Witches' (*v. ante*, and compare as to the date of the production of this play Collier's note to Field's 'A Woman is a Weathercock' (v. 2) in 'Five Old Playes,' 1833. 23. 'The Life and Death of Sir Martin Skink, with the Wars of the Low Countries;' entered on the Stationers' books 8 April 1654, but not printed. 24. 'The Apprentice's Prize;' entered 8 April 1654, but not printed (HALLIWELL).

Besides his plays and the very commonplace lyrics contained in them, Brome wrote a song (printed with 'Covent Garden weeded'); a very long-drawn epigram or piece of occasional verse upon Suckling's 'Aglaura,' printed in folio (*ib.*); some complimentary lines to the Earl of Newcastle (*ib.*); and some lines in memory of Fletcher, already mentioned (published in the folio of Beaumont and Fletcher, 1647).

[Halliwell's Dictionary of Old English Plays (1860); Biographia Dramatica (1812), i. 68–9; Dodsley's Collection of Old Plays, 2nd edition (1780), x. 321–3; Genest's Account of the English Stage (1832), x. 34–47; Ward's History of English Dramatic Literature (1875), ii. 337–42; the 1873 reprint of Brome's Dramatic Works in 3 vols. has been occasionally cited above as Works.] A. W. W.

BROME, THOMAS (*d.* 1380), Carmelite divine, was brought up in the monastery of his order in London, whence he proceeded to Oxford and attained the degree of master, and also, as it seems, of doctor in divinity. There he seems to have distinguished himself as a preacher. Returning to London, he was made prior of his house, and at a general chapter of the order, held at Cambridge in 1362, was appointed its provincial in England. This office he resigned in 1379, and died in his monastery a year later. Bale (*Script. Brit. Cat.* vi. 61, p. 486) enumerates his works as follows: 'Lectura Theologiæ;' 'Encomium Scripturæ Sacræ;' an exposition 'in Paulum ad Romanos' (also on the preface by St. Jerome to that epistle); 'Sermones de Tempore;' 'Quæstiones variæ.' Another work mentioned by Tanner (*Bibl. Brit.* p. 130), and entitled 'Lectiones pro inceptione sua Oxonii MCCCLVIII.' (perhaps identical with the 'Encomium' above referred to), is of value as giving the date of Brome's procession to the degree, apparently, of D.D. None of these productions are now known to exist. Brome is probably the Thomas Brunæus described by Tanner (*Bibl. Brit.* 132) as a native of Dunbar.

[Leland's Comm. de Script. Brit. cap. dcxviii. p. 375; C. de Villiers's Bibliotheca Carmelitana, ii. 807 seq., Orleans, 1752, folio.] R. L. P.

BROMFIELD, EDMUND DE (*d.* 1393), bishop of Llandaff, was a monk of the Benedictine monastery of Bury St. Edmunds. Gaining the reputation of being the most learned member of this community, he at the same time aroused the jealousy of the other monks, who, calling him factious and a disturber of the peace, determined to get rid of him by some means. This was done by getting Bromfield to proceed to Rome as

public procurator not only for the establishment at Bury St. Edmunds, but for the whole Benedictine order, a promise being at the same time extorted from him that he would seek no preferment in his own community. His reputation for learning followed him to Rome, where he was appointed to lecture on divinity. On the death of the abbot of Bury St. Edmunds he sought and obtained the appointment from the pope in spite of his oath. The monks, however, with the sanction of King Richard II, chose John Timworth for abbot, and on Bromfield's arrival in England to claim his appointment he was seized and imprisoned on a charge of violating the statute of Provisors, a precursor of the statute of Præmunire. The pope did not interfere, but after an imprisonment of nearly ten years Bromfield was released, and, with the king's concurrence, appointed bishop of Llandaff in 1389 on the translation of William Bottesham to Rochester. In the royal brief confirming to him the temporalities of the see Bromfield is designated abbot of the Benedictine monastery of Silva Major in the diocese of Bordeaux, and 'Scholarum Palatii Apostolici in sacra theologia magister.' Bromfield died in 1393, and was buried in Llandaff Cathedral. He is said to have been the author of several works, but not even the titles of any of them are now extant.

[Godwin, De Præsulibus (1743), p. 608; Willis's Survey of Cathedral Church of Llandaff, p. 55; Ziegelbauer's Historia rei lit. Ord. S. Benedicti, pt. ii. p. 89; Pits's Rel. Hist. de rebus Anglicis, p. 834; Leland's Comm. de Scriptoribus Britannicis, p. 378.] A. M.

BROMFIELD, WILLIAM (1712–1792), surgeon, was born in London in 1712, and, after some years' instruction under a surgeon, commenced at an early period to practise on his own account. In 1741 he began a course of lectures on anatomy and surgery which attracted a large attendance of pupils. Some years afterwards he formed, along with Mr. Martin Madan, the plan of the Lock Hospital for the treatment of venereal disease, to which he was appointed surgeon. For a theatrical performance in aid of its funds he altered an old comedy, the 'City Match,' written in 1639 by Jaspar Maine, which in 1755 was acted at Drury Lane. He was also elected one of the surgeons of St. George's Hospital. In 1761 he was appointed one of the suite to attend the Princess of Mecklenburg on her journey to England to be wedded to George III, and after the marriage he was appointed surgeon to her majesty's household. Besides contributing some papers to the 'Transactions of the Royal Society,' he was the author of: 1. 'An Account of English Nightshades,' 1757. 2. 'Narrative of a Physical Transaction with Mr. Aylet, surgeon at Windsor,' 1759. 3. 'Thoughts concerning the present peculiar Method of treating persons inoculated for the Small-pox,' 1767. 4. 'Chirurgical Cases and Observations,' 2 vols., 1773. In his later years he retired from his profession, and resided in a house which he had built for himself in Chelsea Park. He died on 24 Nov. 1792.

[Rees's Encyclopædia, vol. v.; Brit. Mus. Catalogue.]

BROMFIELD, WILLIAM ARNOLD (1801–1851), botanist, was born at Boldre, in the New Forest, Hampshire, in 1801, his father, the Rev. John Arnold Bromfield, dying in the same year. He received his early training under Dr. Knox of Tunbridge, Dr. Nicholas of Ealing, and Rev. Mr. Phipps, a Warwickshire clergyman. He entered Glasgow University in 1821, and two years later he took his degree in medicine. During his university career he first showed a liking for botany, and made an excursion into the Scottish highlands in quest of plants.

He left Scotland in 1826, and, being independent of professional earnings, travelled through Germany, Italy, and France, returning to England in 1830. His mother died shortly afterwards, and he lived with his sister at Hastings and at Southampton, and finally settled at Ryde in 1836. He published in the 'Phytologist' some observations on Hampshire plants, and then began to amass materials for a Flora of the Isle of Wight, which he did not consider complete even after fourteen years of assiduous labour. In 1842 he spent some weeks in Ireland, and in January 1844 he started for a six months' tour to the West India Islands, spending most of the time in Trinidad and Jamaica. Two years later he visited North America, publishing some remarks in Hooker's 'Journal of Botany.'

In September 1850 he embarked for the East, and spent some time in Egypt, penetrating as far as Khartoum, which he described in a letter as a 'region of dust, dirt, and barbarism.' Here he lost two of his companions, victims to the climate, and he returned to Cairo in the following June, after an absence of seven months. Continuing his journey, he passed by Jaffa, and stated his intention of leaving Constantinople for Southampton in September, but his last letter was dated 'Bairout, 22 Sept.,' when he was expecting a friend to join him on a trip to Baalbec and Damascus. At the latter place

he was attacked by malignant typhus, and died on 9 Oct., four days after his arrival.

His collections were sent to Kew, some of the contents being shared amongst his scientific friends. The Flora of the Isle of Wight was printed by Sir W. J. Hooker and Dr. Bell Salter in 1856, under the title of 'Flora Vectensis,' in 8vo, with a topographical map and portrait of the author. His manuscript Flora of Hampshire was never published. His herbarium is now at Ryde in the Isle of Wight, but his manuscripts are in the library of the Royal Kew Gardens. He left behind him the memory of a most amiable man and zealous naturalist.

[Hooker's Kew Gard. Misc. (1851) iii. 373-382; Proc. Linn. Soc. ii. 182-3; Royal Soc. Cat. Sci. Papers, i. 644; Townsend's Fl. of Hampshire, xvi. xvii.] B. D. J

BROMHALL, ANDREW (*fl.* 1659), divine, was one of the 'triers' for the county of Dorset commissioned in 1653-4 to eject immoral and inefficient ministers. He had been previously presented by the parliament to the substantial rectory of Maiden-Newton, Dorsetshire, then vacant by the sequestration of Matthew Osborn, M.A. (HUTCHINS, *Dorset*, ii. 253), or Edward Osbourn, A.M. (WALKER, *Sufferings of the Clergy*, p. 322). Hutchins records that 'Bromhall died before the Restoration.' Calamy is apparently in error in stating that Bromhall was ejected from Maiden-Newton in 1662, and was afterwards resident in London. He contributed Sermon xxvii. (probably preached before the Restoration) to the first volume (1661) of 'The Morning Exercises at Cripplegate, St. Giles-in-the-Fields, and in Southwark: being Divers Sermons preached A.D. MDCLIX-MDCLXXXIX by several Ministers of the Gospel in or near London,' 6 vols. 8vo, London, fifth edition, 1844.

[Walker's Sufferings of the Clergy; Calamy's Nonconformist's Memorial (1802), ii. 102; Hutchins's Dorsetshire (1803), vol. ii.; Neal's History of the Puritans.] A. H. G.

BROMLEY, HENRY (pseudonym). [See WILSON, ANTHONY, *fl.* 1793.]

BROMLEY, JAMES (1800-1838), mezzotint-engraver, was the third son of William Bromley, A.R.A. [q. v.], the line-engraver. Little is known respecting his life. Among his best plates may be enumerated portraits of the Duchess of Kent, after Hayter; John, earl Russell, after Hayter; and the Earl of Carlisle, when Lord Morpeth, after Carrick; 'Falstaff,' after Liversege; 'La Zingarella,' after Oakley, &c. He exhibited twelve of his works at the Suffolk Street Gallery between 1829 and 1833. He died on 12 Dec. 1838.

[Redgrave's Dictionary of Artists of the English School, London, 1878, 8vo.] L. F.

BROMLEY, JOHN (*d.* 1717), translator, was a native of Shropshire, and received an academical education. Probably he was the John Bromley of Christ Church, Oxford, who graduated B.A. in 1685 and M.A. in 1688. In the beginning of James II's reign he was curate of St. Giles's-in-the-Fields, London, but soon afterwards he joined the Roman catholic church and obtained employment as a corrector of the press in the king's printing-house. On being deprived of this means of subsistence he established a boarding-school in London which was attended by the sons of many persons of rank. 'He was well skilled in the classics,' says Dodd, 'and, as I am informed, Mr. Pope, the celebrated poet, was one of his pupils.' Afterwards Bromley was appointed tutor to some young gentlemen, and travelled with them abroad. His death occurred, at Madeley in Shropshire, 10 Jan. 1716-17. He published 'The Catechism for the Curats, composed by the Decree of the Council of Trent, faithfully translated into English,' Lond. 1687, 8vo, and probably he was also the translator of 'The Canons and Decrees of the Council of Trent,' Lond. 1687, 4to.

[Dodd's Church Hist. iii. 459; Cat. of Oxford Graduates (1851), 87; Jones's Popery Tracts (Chetham Soc.), 117; Watt's Bibl. Brit.; Carruthers's Life of Pope (1857), 21 *n*; Chalmers's Biog. Dict. xxv. 164.] T. C.

BROMLEY, SIR RICHARD MADOX (1813-1865), civil servant, traced his descent to Sir Thomas Bromley (1530-1587) [q. v.], lord chancellor of England in the reign of Elizabeth. He was the second son of Samuel Bromley, surgeon of the royal navy, and Mary, daughter of Tristram Maries Madox of Greenwich, and was born on 11 June 1813. He was educated at Lewisham grammar school, and in 1829 entered the admiralty department of the civil service. In 1846 he was appointed to visit the dockyards on a confidential mission, shortly after which he was named accountant to the Burgoyne commission on the Irish famine. Here the prompt and correct system which he introduced into the accounts had the effect of bringing more than half a million sterling back to the exchequer, and attracted the special attention of the House of Commons. The success with which he had discharged his duties led to his being in 1848 appointed secretary to the commission for auditing the public accounts, into which he introduced

improvements which in a great degree remodelled the working of the department. From this period he was frequently employed on special commissions of inquiry into public departments, including that appointed in 1849 for a revision of the dockyards, and that of 1853 on the contract packet system. In recognition of his services he was in 1854 nominated a civil commander of the Bath. On the outbreak of hostilities with Russia he was appointed accountant-general of the navy, the affairs of which he administered with marked ability and success. In 1858 he was created knight commander of the Bath. On retirement from his office through ill-health he was on 31 March 1863 appointed a commissioner of Greenwich Hospital. He died on 30 Nov. 1865.

[Gent. Mag. 4th ser. i. 277–8.] T. F. H.

BROMLEY, Sir THOMAS (*d.* 1555?), judge, was of an old Staffordshire family, and a second cousin of Sir Thomas Bromley (1530–1587) [q. v.] His father was Roger, son of Roger Bromley of Mitley, Shropshire, and his mother was Jane, daughter of Mr. Thomas Jennings. He was entered at the Inner Temple, was reader there in the autumn of 1532, and again in the autumn of 1539, and was nominated in Lent term 1540, but did not serve. He was made serjeant-at-law in 1540, and king's serjeant on 2 July of the same year, and on 4 Nov. 1544 he succeeded Sir John Spelman as a judge of the common pleas. He was held in favour by Henry VIII, who made him one of the executors of his will, and bequeathed him a legacy of 300*l.* Hence he was one of the council of regency to Edward VI; but, although he succeeded in avoiding political entanglements for some time, at the close of the reign he became implicated in Northumberland's scheme for the succession of Lady Jane Grey. The duke summoned to court Montagu, chief justice of the common pleas, Bromley, Sir John Baker, and the attorney- and solicitor-general, and informed them of the king's desire to settle the crown on Lady Jane. They replied that it would be illegal, and prayed an adjournment, and next day expressed an opinion that all parties to such a settlement would be guilty of high treason. Northumberland's violence then became so great that both Bromley and Montagu were in bodily fear; and two days later, when a similar scene took place, and the king ordered them on their allegiance to despatch the matter, they consented to settle the deed, receiving an express commission under the great seal to do so and a general pardon. Bromley, however, adroitly avoided witnessing the deed, and consequently, when Mary sent the lord chief justice to gaol, she made Bromley chief justice of the common pleas, in the room of Sir Roger Cholmley, on 4 Oct. 1553. Burnet says of him that he was 'a papist at heart.' He did not hold this office long. On 17 April 1554 Sir Nicholas Throgmorton and others were indicted for a plot and treason at Baynard's Castle on 23 Nov. 1553, and for a rising and march towards London with Sir Henry Isley and two thousand men. Bromley presided at the trial, and allowed the prisoner such unusual freedom of speech as to provoke complaints from the queen's attorney, and threats of retiring from the prosecution. Yet Bromley was not throughout impartial, but even refused the prisoner leave to call a witness, though he was in court, and denied him inspection of a statute on which he relied. His summing up was so defective, 'for want of memory or goodwill,' that the prisoner supplied its defects, as if he had been an uninterested spectator. Yet the prisoner was acquitted; so much to Mary's annoyance that the jury were punished for their verdict. Sir William Portman succeeded Bromley as chief justice on 11 June 1555; but the exact date of his death is not known. He left an only daughter, Margaret, who married Sir Richard Newport, ancestor of the earls of Bradford. He is buried at Wroxeter.

[Foss's Lives of the Judges; Dugdale's Orig. Jurid. 164; Testam. Vetust. 43; Holinshed, iv. 31–55; Collins's Peerage, vii. 250, ix. 409; Green's Calendar of State Papers, 17 April 1554.] J. A. H.

BROMLEY, Sir THOMAS (1530–1587), lord chancellor, descended from an ancient family established since the time of King John at Bromleghe, Staffordshire. A member of this family, Roger, settled at Mitley, Shropshire, and had two sons, William and Roger. Thomas Bromley was the grandson of the former, who lived at Hodnet, Shropshire, his father's name being George, and his grandmother being Elizabeth, daughter of Sir Thomas Lacon of Willey in the same county. The family had a considerable legal turn, George Bromley being a reader at the Inner Temple during the reigns of Henry VII and Henry VIII, and his brother, Sir George Bromley, chief justice of Chester under Elizabeth and father to Sir Edward Bromley, who was a judge under James I. Thomas Bromley was born in 1530. He was educated at Oxford, where he took his B.C.L. degree 21 May 1560, entered the Inner Temple, and became reader in the autumn of 1566. He was studious and regular in his conduct, and probably owed something to family influence. He

was M.P. for Bridgnorth (1558), for Wigan (1559), and for Guildford (1562). He was recorder of London from 8 June 1566 until, in 1569 (14 March), he became solicitor-general. His first considerable case was in 1571, when he was of counsel for the crown on the trial of the Duke of Norfolk for high treason, on which occasion he had the conduct of that part of the case which rested on Rodolph's message. The other counsel for the crown were Gerrard, attorney-general, Barham, queen's serjeant, and Wilbraham, attorney-general of the court of wards. The Earl of Shrewsbury presided, with twenty-six peers as triers and all the common-law judges as assessors. Bromley's speech came third, and certainly the mode in which the evidence was handled and the prosecution conducted throughout reflects little credit on the fairness of those who represented the crown. Yet Bromley has the reputation of having been an honourable man in his profession, and Lloyd says of him that he was scrupulous in undertaking a case unless satisfied of its justice, 'not admitting all causes promiscuously, . . . but never failing in any cause. For five years he was the only person that people would employ' (*State Worthies*, 610). The duke was found guilty by a unanimous vote of the court; but so much dissatisfaction did the trial create that the execution was deferred for several months. Mary Queen of Scots, however, was much disheartened at the result, and hopes were entertained of favourable negotiations with her. Bromley was accordingly sent, fruitlessly, as it proved, to endeavour to induce her to abandon her title to the Scotch crown, and to transfer to her son all her rights to the thrones of England and Scotland. In 1574 he was treasurer of the Inner Temple. He was retained by Lord Hunsdon and patronised by Lord Burghley. For some years it was he, rather than Gerrard, the attorney-general, who was consulted on matters of state, and at last, in 1579, he received his reward. On the death of Lord-keeper Bacon there was for some time great doubt as to the appointment of a successor. Between Hilary and Easter terms, 20 Feb.–20 April, there was an interregnum of two months, during which the great seal was in no lawyer's custody, and on the seven occasions within that period on which it was used the queen issued express orders for its use each time. At last legal business was so much impeded, through the impossibility of obtaining injunctions, that Westminster Hall demanded an appointment. The queen's position was difficult. She was resolute not to appoint an ecclesiastic; it would be a scandal to make a mere politician lord chancellor, and Gerrard, long as he had been attorney-general, was, though learned, awkward and unpopular. Bromley was a politician and a man of the world, and at this juncture, by dint of intrigue, succeeded in obtaining promotion over his superior in the profession and in learning. Gerrard was afterwards consoled with the mastership of the rolls in 1581 (30 May), and on 26 April 1579 Bromley received the great seal. From his speech to the queen made on this occasion, and reported in the 'Egerton Papers' (Camden Soc.), p. 82, it would appear that he was at first lord keeper and afterwards became lord chancellor. But this is erroneous; he had the title of lord chancellor from the first. In this new position he discharged his duties to the satisfaction of the profession. Though his own practice had been chiefly in the queen's bench, his duties as solicitor-general frequently took him into chancery, and hence, though not a great founder of equity, he proved a good equity judge, and there were no complaints of his decisions; and having the good sense to pay great respect to the then very able common-law judges, and to consult them on new points, he was able to avoid conflicts between law and equity. Thus, in Shelley's case, the queen, hearing of the long argument in the queen's bench, 'of her gracious disposition,' and to end the litigation, directed Bromley, 'who was of great and profound knowledge and judgment in the law,' to assemble all the judges, and in Easter term 23 Eliz. they met at his house, York House, afterwards Serjeants' Inn, to hear the case (1 Coke, 93 *b*), and his judgment has ever since remained a leading authority in real property law. Camden calls him 'vir jurisprudentiâ insignis,' and Fuller says: 'Although it was difficult to come after Sir Nicholas Bacon and not to come after him, yet such was Bromley's learning and integrity that the court was not sensible of any considerable alteration.' Knyvett's case is one which shows his fair administration of law. Knyvett, a groom of the privy chamber, had slain a man, and, the jury on the inquiry having found that it was done *se defendendo*, applied to Bromley for a special commission to clear him by privy session in the vacation. Bromley refused. Knyvett complained to the queen, who expressed her displeasure through Sir Christopher Hatton; whereon the chancellor, in a written statement, so completely justified himself that she afterwards expressed commendation of his conduct. Upon the project of the Alençon marriage, 'Bromley, who with Bacon's office had inherited his freedom of speech' (Froude, xi. 159), offered a strong opposition, and pointed

out to the queen that if she married a catholic parliament would expect her to settle the succession to the throne, and this argument seems to have prevailed with her. In 1580 he was engaged by the queen's orders in an inquiry as to the removal of one William Crowther from the keepership of Newgate; and several letters of his are extant on the subject. When Drake returned from his second voyage in 1581, Bromley was one of those whose favour he hastened to secure with a present of wrought-gold plate, part of his Spanish spoil, of the value of eight hundred dollars. Bromley took his seat in the House of Lords on 16 Jan. 1582. The first business before the house being a petition of the commons for advice in choosing a speaker, the chancellor, the choice having fallen on Popham, the new solicitor-general, admonished him by the queen's orders 'that the House of Commons should not deal or intermeddle with any matters touching her majesty's person or estate, or with church government.' To this admonition the commons paid no attention, and accordingly, as soon as a subsidy had been voted, the session was closed, the chancellor excluding from the queen's thanks 'such members of the commons as had dealt more rashly in some matters than was fit for them to do.' Shortly afterwards this parliament was dissolved, having lasted eleven years. Bromley continued in favour, and on 26 Nov. of the same year was consulted by the queen upon the proposals made by the French ambassador. On 21 June 1585 the Earl of Northumberland, then a prisoner in the Tower, was found dead in his cell. Three days afterwards a full meeting of peers was held in the Star-chamber, and the chancellor briefly announced that the earl had been engaged in traitorous designs, and had laid violent hands on himself. A new parliament assembled on 23 Nov. 1585, and was opened with a speech from Bromley, announcing that it was summoned to consider a bill for the trial of Mary Queen of Scots. The bill soon passed. Bromley was at this time active in the prosecution of Babington. After his conviction and execution a court was constituted for Mary's trial. It consisted of forty-five peers, privy councillors, and judges, and the chancellor presided over it. It sat at Fotheringhay Castle, Northamptonshire, where Mary was imprisoned. Bromley arrived on 11 Oct. 1586, having dissolved parliament on 14 Sept. at Westminster as a commissioner, with the Archbishop of Canterbury and others. The court sat, and Mary at once placed a difficulty in the way of the prosecution by refusing to plead, 'she being a queen, and not amenable to any foreign jurisdiction.' There was then a conference between the queen and the chancellor, but at first her firmness baffled him. 'I will never submit myself,' she said, 'to the late law mentioned in the commission.' She yielded to his urgency at length, and the trial proceeded. On 14 Oct. a sitting was held in the presence chamber, the lord chancellor, as president, sitting on the right of a vacant throne, and the commissioners on benches at the sides. Mary's defence was so vigorous that Burghley, in alarm, set aside Bromley and Gawdy, the queen's serjeant, who was chief prosecutor, and himself replied. At the end of the second day the court was adjourned to 25 Oct., at the Star-chamber, Westminster, when, the chancellor presiding, the whole court—except Lord Zouch, who acquitted her on the charge of assassination—found Mary guilty. On the 29th parliament met, and the chancellor announced that they were called together to advise the queen on this verdict. The commons did not long deliberate. On 5 Nov., after electing a speaker, they agreed with the lords upon an address to the queen, to be presented by the lord chancellor, praying for Mary's execution. For some time Elizabeth hesitated, but on 1 Feb. 1587 she was induced to sign the warrant. Bromley at once affixed the great seal to it, and informed Burghley that it was now perfected. The privy council was hastily summoned, and decided to execute the warrant, the queen having done all that was required of her by law. Bromley, as head of the law, took on himself the chief burden of the responsibility; but probably he expected to shelter himself behind the authority of Burghley. It is certain that he was very anxious during the trial, and was a party to the execution of the warrant only with great apprehension. The strain proved too much for his strength. Parliament met on 15 Feb., but adjourned, owing to the chancellor's illness; and, as it continued, Sir Edmund Coke, chief justice of the common pleas, dissolved parliament on 23 March, acting for the chancellor by commission from the queen. Bromley never rallied. He died on 12 April, at three A.M., in his fifty-eighth year, and was buried with great pomp in Westminster Abbey, where a splendid tomb was erected by his eldest son. His seals were offered to, but refused by, Archbishop Whitgift. As an equity judge Bromley was regretted till the end of the reign. In spite of the temper of the age, he was free from religious bigotry, and, as a letter of his (1 July 1582) to the Bishop of Chester, pleading for Lady Egerton of Ridley, shows,

he endeavoured to soften the law as to the execution of heretics. A considerable collection of his letters is preserved among the archives of the city of London. It appears from them that previously to 1580 he occupied a house near the Old Bailey. In 1580 and 1583 he had a house next Charing Cross, and at the same time a country residence in Essex. He married Elizabeth, daughter of Sir Adrian Fortescue, K.B., and by her had four sons and four daughters. His eldest son was Sir Henry Bromley of Holt Castle, Worcestershire, from whose descendants the property passed to John Bromley of Horseheath Hall, Cambridgeshire, the ancestor of the now extinct barons of Montfort of Horseheath. One of Bromley's daughters, Elizabeth, was first wife to Sir Oliver Cromwell of Hinchinbrook Castle, Huntingdonshire, uncle and godfather to the Protector; another, Anne, married Richard Corbet, son of Reynold Corbet, justice of the common pleas; Muriel married John Lyttelton of Frankley, ancestor of the present Barons Lyttelton, who was implicated in Lord Essex's plot; and the fourth, Joan, married Sir Edward Greville of Milcote. Two books were dedicated to him: 'The Table to the Year-Books of Edward V,' published 1579 and 1597, and a sermon preached at St. James's, on 25 April 1580, by Bartholemew Chamberlaine, D.D., of Holiwell, Huntingdonshire, published in 1584.

BROMLEY, VALENTINE WALTER (1848–1877), painter, great-grandson of William Bromley (1769–1842) [q. v.], was born in London on 14 Feb. 1848. From his childhood he manifested a remarkable faculty for art, both as an original designer and as a depicter of nature. He was especially remarkable for invention and swiftness of execution. He contributed largely to the 'Illustrated London News,' and illustrated the American travels of Lord Dunraven, whom he accompanied in his tour. He was an associate of the Institute of Painters in Water Colours, and was an exhibitor at the Royal Academy at the time of his death. He died very unexpectedly from an attack of smallpox on 30 April 1877, just as he had undertaken an important series of illustrations of Shakespeare and the Bible. He was a thorough artist, as full of animation and energy as of talent, and greatly beloved for his affectionate temper and warmth of heart. He had been married only a few months to a lady artist of considerable mark, Ida, daughter of Mr. John Forbes-Robertson. His picture of 'Troilus and Cressida' is engraved in the 'Art Journal' for 1873.

[Art Journal, xxxix. 205; Athenæum, 5 May 1877.] R. G.

BROMLEY, WILLIAM (1664–1732), secretary of state, was descended from an old Staffordshire family, which traced its descent from Sir Walter Bromley, a knight in the reign of King John. He was the eldest son of Sir William Bromley, knight, and was born in 1663–4, at Baginton, Warwickshire, which had been purchased by his grandfather (DUGDALE, *Antiquities of Warwickshire*, i. 232). In Easter term 1679 he entered, as a gentleman commoner, Christ Church, Oxford, and on 5 July 1681 proceeded to the degree of B.A.

Shortly after leaving the university young Bromley spent several years in travelling on the continent, and in 1692 he published an account of his experiences under the title 'Remarks in the Grande Tour lately performed by a Person of Quality.' This was followed in 1702 by 'Several Years through Portugal, Spain, Italy, Germany, Prussia, Sweden, Denmark, and the United Provinces, performed by a Gentleman.'

On his return from abroad Bromley turned to a political career. In Feb. 1689–90 he was chosen knight of the shire for Warwickshire, his native county. In March 1700–1 he was returned for Oxford university, which he continued to represent during the remainder of his life. By the university he was, in August 1702, created D.C.L. In 1701 he was appointed by the commons a member of the committee of public accounts, and in 1702 he was chosen chairman of the committee of elections. He was an ardent supporter of the high-church party, and in 1702, 1703, and

1704 made strenuous endeavours to pass the bill against occasional conformity—a practice denounced by him as a 'scandalous hypocrisy.' For his untiring zeal on behalf of the bill he received the special thanks of the university of Oxford. He early acquired a high reputation as an able and effective debater, and from his high character, 'grave deportment,' and mastery of the forms of the house, was supposed to have pre-eminent claims for the office of speaker, which became vacant in 1705. His candidature would undoubtedly have been successful had not his enemies hit upon the expedient of republishing his 'Remarks in the Grande Tour,' several passages in which had previously caused some comment as indicating a bias towards Jacobitism, and a probable leaning to Roman catholicism. The device, according to Oldmixon, was the invention of Robert Harley, afterwards Earl of Oxford, who, 'having one of those copies by him, reprinted it on that occasion; and to all that came to his house about that time he said: "Have you not seen Mr. B.'s travels?" Being answered in the negative, he went into a back parlour, where this impression of it lay, fetched it out, and gave every one a copy; till that matter was made up and the election secured' (*History of England*, 345). Among the more objectionable portions of the book was an account of his admission to kiss the pope's slipper, 'who,' the writer adds, 'though he knew me to be a protestant, gave me his blessing and said nothing about religion,' and a reference to William and Mary merely as Prince and Princess of Orange. To give point to the joke of republication, a 'table of principal matters' was added, in which a ludicrous travestie was given of certain of the contents. The issue purports to be the second edition, although a second edition had already appeared in 1693. The publication of the volume caused feeling to run very high, and, as Evelyn relates, 'there had never been so great an assembly on the first day of a sitting, being more than 450. The votes of the old as well as the new members fell to those called low churchmen, contrary to all expectation' (*Diary*, 31 Oct. 1705). The result was that John Smith, M.P. for Andover, was chosen over Bromley by a majority of forty-three votes. After the tory reaction following the trial of Dr. Sacheverell, Bromley was, on 25 Nov. 1710, chosen speaker without opposition. This office he exchanged in August 1713 for that of secretary of state. The death of Queen Anne caused the fall of the tory government, and he never again held office, though he maintained an influential position in the tory party. He died 13 Feb. 1731-2, and was buried at Baginton. His portrait is in the university gallery at Oxford.

Amid the keen and unscrupulous party strifes of this period of English history, and the peculiar temptations which beset politicians, Bromley succeeded in retaining a high reputation both for political prudence and for honesty. His undoubted sincerity rendered him, however, an extremely keen partisan. He displayed special bitterness in his attacks on Marlborough, and his comparison of the duchess to Alice Perrers, the mistress of Edward III, was a scandalous violation of the decencies of political warfare.

BROMLEY, WILLIAM (1699?–1737), politician, was second son of William Bromley (1664–1732) [q. v.] He was elected upon the foundation at Westminster in 1714, at the age of 15. He was a member of Oriel College, Oxford, and was created D.C.L. on 19 May 1732. He was elected member for Fowey in 1725 and Warwick in 1727. On 13 March 1734 he was put forward by the party opposed to Walpole to move the repeal of the Septennial Act. Parliament was soon afterwards dissolved, and Bromley lost his seat for Warwick. He was elected in February 1737, on the death of George Clarke, to represent the university of Oxford, which his father had represented from 1702 till 1732. He died the following month, 12 March 1737. His wife, by whom he left no issue, was a Miss Frogmorton. His portrait is in the Bodleian Gallery.

[Welch's Queen's Scholars, pp. 265, 544; Gent. Mag. vii. 189; Parl. Hist. ix. 396; Wood's History and Antiquities (Gutch), ii. 977; Official Lists of Members of Parliament.]

BROMLEY, WILLIAM (1769–1842), line-engraver, was born at Carisbrooke in the Isle of Wight. He was apprenticed to an engraver named Wooding, in London, and among his early productions were some of the plates to Macklin's Bible, the 'Death of Nelson,' after A. W. Devis, and the 'Attack on Valenciennes,' after P. J. de Loutherbourg. Later works were two portraits of the Duke of Wellington, after Sir Thomas Lawrence; and Rubens's 'Woman taken in Adultery.' Bromley was elected an associate engraver of the Royal Academy in 1819, and in the same year also a member of

the academy of St. Luke, Rome. He was employed for many years by the trustees of the British Museum in engraving the Elgin marbles, from drawings executed by G. J. Corbould. Between 1786 and 1842 he exhibited fifty plates at the Royal Academy.

[Redgrave's Dictionary of Artists of the English School, London, 1878.] L. F.

BROMPTON, JOHN (*fl.* 1436), supposed chronicler, was elected abbot of Jorvaux in 1436. The authorship of the compilation printed in Twysden's 'Decem Scriptores' (col. 725–1284, Lond. 1652), with the title 'Chronicon Johannis Brompton, Abbatis Jorvalensis, ab anno quo S. Augustinus venit in Angliam usque mortem Regis Ricardi Primi,' is uncertain. It has been ascribed to Brompton on the strength of an inscription at the end of the C. C. C. Cambridge MS., which probably means nothing more than that Brompton had that manuscript transcribed for him. Sir T. D. Hardy has pointed out that the compilation must have been made after the middle of the fourteenth century, as it contains many extracts from Higden, who is referred to, 'and that there is reason to believe that it was based on a previous compilation, made probably by a person connected with the diocese of Norwich.' The work is wholly uncritical, and, having been widely accepted as authoritative by writers of past times, has been the means of importing many fables into our history.

[Hardy's Descriptive Catalogue of Materials relating to the History of Great Britain, ii. 539–541; Dugdale's Monasticon, v. 567.] W. H.

BROMPTON, RICHARD (*d.* 1782), portrait-painter, studied under Benjamin Wilson, and afterwards under Raphael Mengs at Rome; here he became acquainted with the Earl of Northampton, whom he accompanied to Venice. During his stay in that city he painted the portraits of the Duke of York and other English gentlemen, in a conversation piece, which was exhibited at Spring Gardens in 1763. In that year Brompton settled in London, residing in George Street, Hanover Square. In 1772 he painted the Prince of Wales, full length, in the robes of the Garter, and his brother, Prince Frederick, in the robes of the Bath. His best known portrait is that of William Pitt, first earl of Chatham, in which the great statesman is represented half-length, in peer's robes, standing with his right hand raised to his breast and his left arm extended. The original was presented in 1772 by the earl himself to Philip, second earl of Stanhope, and is now at Chevening. It was engraved in line by J. K. Sherwin in 1784, and in mezzotint by E. Fisher. There is a replica in the National Portrait Gallery, London. Brompton's extravagant habits led him into difficulties, and caused his confinement in the king's bench prison for debt; but being appointed portrait-painter to the Empress of Russia, he was released and went to St. Petersburg, where he died in 1782. In the gallery of Greenwich Hospital is a half-length portrait by him of Admiral Sir Charles Saunders, K.B. Brompton was an exhibitor at the Society of Arts and Royal Academy between the years 1767 and 1780.

[Redgrave's Dictionary of Artists, 1878.] L. F.

BROMSGROVE, RICHARD (*d.* 1435), was a monk of the Benedictine abbey of Evesham, who doubtless derived his name (which is sometimes given under the form of Bremesgrave) from Bromsgrove in Worcestershire as his birthplace. He was elected abbot of Evesham when infirmarer of the abbey, on 6 Dec. 1418, and was consecrated in Bengeworth church by Bishop Barrow, of Bangor, who in the year previous had been chancellor of Oxford. He died on 10 May 1435, after holding the abbacy for seventeen years, and was buried before the high altar in St. Mary's chapel in the abbey church. The register of his acts during his abbacy is preserved in Cotton MS. Titus C. ix. (ff. 1–38). It contains articles for the reformation of monasteries which were proposed by Henry V in 1421, with modifications suggested by various abbots. It appears from this register (f. 32) that he wrote a tract, 'De fraterna correctione canonice exercenda.' A transcript of the register exists amongst the collections of James West in Lansdowne MS. 227, British Museum.

[Tanner's Bibl. Brit.; Nash's Worcestershire, i. 400, where, however, there are errors in dates; Chronicon Abb. de Evesham (Rolls Series), xxxvii. 338.] W. D. M.

BROMYARDE, JOHN DE (*fl.* 1390), born at Bromyard, Herefordshire, was a Dominican friar. He was educated at Oxford, where he distinguished himself in jurisprudence as well as in theology, and subsequently lectured on theology at Cambridge, being chancellor of that university in 1383. He was a keen opponent of the doctrines of Wycliffe, which he denounced in preaching and lecturing, and also by writing; and he is said by some writers to have taken part in the fourth council of London which assembled under William de Courtenay, archbishop of Canterbury, in the year 1382, for the purpose of condemning Wycliffe; but Brom-

yarde's name does not appear in contemporary lists of persons present at the council. Bromyarde is the author of a work entitled 'Summa Prædicantium,' printed at Nuremberg by A. Koberger in 1485, and reprinted several times, the last edition having appeared at Venice in 1586. It is also probable that he was the author of 'Opus trivium perutilium materiarum prædicabilium per Philippum de Bronnerde,' probably from the press of Fust and Schœffer at Mayence, about 1475. This book was reprinted at Paris in 1500, with the author's name given as Joannes Bromyard.

BRONTË, CHARLOTTE (1816–1855), afterwards NICHOLLS, novelist, was the daughter of Patrick Brontë (1777–1861), and sister of PATRICK BRANWELL BRONTË (1817–1848), EMILY JANE BRONTË (1818–1848), and ANNE BRONTË (1820–1849). Patrick Brontë, born on 17 March 1777 at Ahaderg, co. Down, was one of the ten children of Hugh Prunty or Brontë. He changed his paternal name to Brontë shortly before leaving Ireland. At the age of 16 he had opened a school at Drumgooland in the same county. The liberality of Mr. Tighe, vicar of Drumgooland, enabled him to go to Cambridge, with a view to taking orders. He entered St. John's College in October 1802, and graduated as B.A. in 1806. He was ordained to a curacy at Wethersfield in Essex, and left in January 1809 to be a curate at Wellington, whence he came to Dewsbury. Leaving this place at the end of the year he was presented in 1811 to the curacy of Hartshead in Yorkshire. His improved means enabled him to allow 20*l.* a year to his mother during her life (LEYLAND, *Brontë Family*, 9). At Hartshead he met Maria, third daughter of Thomas Branwell of Penzance, then on a visit to her uncle, the Rev. J. Fennel, head-master of a Wesleyan academy near Bradford, and afterwards a clergyman of the church of England. They were married on 29 Dec. 1812 by the Rev. W. Morgan, who was at the same time married by Brontë to Fennel's daughter (*Gent. Mag.* 1813, p. 179). Brontë published two simple-minded volumes of verse, 'Cottage Poems' (Halifax, 1811) and the 'Rural Minstrel' (Halifax, 1813), and a tract called 'The Cottage in a Wood, or the Art of becoming Rich and Happy'—a new version of the Pamela Story (reprinted in 1859 from the 2nd edition of 1818). In 1818 he also published the 'Maid of Killarney.' These, and some letters upon catholic emancipation, which appeared in the 'Leeds Intelligencer' for January 1829, were his only publications. After five years at Hartshead, Brontë became perpetual curate of Thornton. His eldest child, Maria, was born at Hartshead. The parish register of Thornton shows that his second daughter, Elizabeth, was baptised there on 26 Aug. 1815; Charlotte (born 21 April) on 29 June 1816; Patrick Branwell on 23 July 1817; Emily Jane on 20 Aug. 1818; and Anne on 25 March 1820. On 25 Feb. 1820 the Brontës had moved to Haworth, nine miles from Bradford, of which Brontë had accepted the perpetual curacy, worth about 200*l.* a year and a house. Mrs. Brontë had an annuity of 50*l.* a year. A previous incumbent of Haworth had been the famous William Grimshaw, one of Wesley's first followers. Haworth was a country village, but great part of the population was employed in the woollen manufacture, then rapidly extending in the rural districts of Yorkshire. Dissent was strong in Haworth, and methodism had flourished there since the time of Grimshaw. Brontë, a strong churchman and a man of imperious and passionate character, extorted the respect of a sturdy and independent population. He is partly represented by Mr. Helston in 'Shirley,' though a Mr. Roberson, vicar of Liversedge and a personal friend of Brontë's, supplied some characteristic traits (MRS. GASKELL, *Life of Charlotte Brontë* (2nd edition), i. 120, ii. 121; REID, p. 21). His behaviour is described by his daughter's biographer as marked by strange eccentricity. He enforced strict discipline; the children were fed on potatoes without meat to make them hardy. He burnt their boots when he thought them too smart, and for the same reason destroyed a silk gown of his wife's. He generally restrained open expression of his anger, but would relieve his feelings by firing pistols out of his back-door or destroying articles of furniture. He became unpopular by supporting the authorities against the Luddites, but afterwards showed equal vigour in supporting men on strike against the injustice of the millowners. He was unsocial in his habits, loved solitary rambles over the moors, and, in consequence of some weakness of digestion, dined alone even before his wife's death and to the end of his own life (GASKELL, i. 49–53; REID, pp. 20–23, 195, 198). Brontë himself complained of some of these statements as false, and Mr. Leyland (i. 41–56) accounts for the shooting and the silk-gown stories by misunderstandings and village gossip. Mrs. Brontë died of cancer on 15 Sept. 1821, and a year later

her elder sister, Miss Branwell, undertook to manage Brontë's household. She disliked the rough climate and surroundings of Haworth, and in later years seldom left her bedroom even for meals. She seems to have been a prim old maid, with whom the children were always reserved. From the time of their mother's illness they were left very much to themselves. They showed extraordinary precocity of talent; they had few friends, saw little of their father or neighbours, and used to walk out alone upon the moors. The eldest, Maria, would shut herself up with a newspaper and study parliamentary debates in the intervals of her care of the younger children. Her father said that he could converse with her on any topics of the day, though she died at the age of eleven; and the whole family, cut off from childish companionship, learnt to take a keen interest in the topics discussed by their elders. A school for clergymen's daughters had been founded in 1823 at Cowan's Bridge, between Leeds and Kendal, chiefly through the exertions of the Rev. William Carus Wilson. Parents were to pay only 14*l.* a year, the necessary balance being provided by subscription. It was opened with only sixteen pupils, and fifty-three had been admitted when Charlotte left the school (SHEPHEARD, *Vindication*). Brontë sent Maria and Elizabeth to this school in July 1824; Charlotte and Emily followed in September.

The school arrangements were at first defective; frugality led to roughness, and the food was badly cooked. A low fever broke out in the spring of 1825. The Brontës escaped; but Maria and Elizabeth soon afterwards became seriously ill, and were taken home only to die, Maria on 6 May 1825 in her twelfth year, and Elizabeth on 15 June in her eleventh year. The vivid picture of this part of her life in the opening scenes of 'Jane Eyre' (where 'Helen Burns' stands for Maria Brontë) represents the impression made upon Charlotte Brontë. She did not anticipate the obvious identification, and therefore did not hold herself bound to strict accuracy. That the account would be exaggerated if taken as an historical document may be fairly inferred from a 'Vindication of the Clergy Daughters' School,' published by the Rev. H. Shepheard in 1859. Some mismanagement at starting was not surprising; reforms were speedily introduced; and fellow-pupils of the Brontës speak warmly of Mr. Wilson and even of Miss Scatcherd's representative, as well as of the school. The diet and lodging could hardly have been rougher than that of Haworth; but the deaths of Maria and Elizabeth succeeding some severe treatment naturally impressed the sensitive imagination of their sister. Charlotte and Emily returned to the school after the summer holidays, but were removed on account of their health before the winter.

The family were now gathered at Haworth. Miss Branwell gave the girls lessons in her bedroom, while Charlotte acted as the childish guardian of her younger sisters. Branwell was chiefly taught by his father, making friends for himself in the village. There was a grammar school at Haworth, where the children may have had some lessons. An elderly woman called 'Tabby' began at this time a service of thirty years with the Brontës, and looked after the children. They were, however, thrown much upon their own resources, and amused themselves by writing. Charlotte made a 'catalogue of her books' written between April 1829 and August 1830. They filled twenty-two volumes of from sixty to a hundred pages of minute handwriting, a facsimile from which is given in Mrs. Gaskell's biography. They consist of stories and childish 'magazines.' The extracts given by Mrs. Gaskell show remarkable indications of imaginative power, while it also appears that the children had imbibed from their father strong tory prejudices and a devoted admiration for the Duke of Wellington. A poem of Charlotte's, written before 1833, given by Mrs. Gaskell, shows especial promise. The education was of course unsystematic. When Charlotte was again sent to school in January 1831, she was remarkably forward in some respects and equally backward in others.

The school was kept by Miss Wooler, at Roehead, between Leeds and Huddersfield. The number of pupils varied from seven to ten, and Charlotte became strongly attached to her teachers and to some of her schoolfellows. One of the latter, Miss Ellen Nussey ('E.' in Mrs. Gaskell's biography), was a lifelong friend and correspondent. Two sisters, Mary and Martha Taylor, who lived at Gomersal, are the Rose and Jessie Yorke of 'Shirley,' where the whole Taylor family is vividly portrayed. Miss Nussey was the original of Caroline Helston in the same novel. Stories told by Miss Wooler of the days of the Luddites suggested other incidents, while a Mr. Cartwright, owner of a neighbouring factory, is represented by Robert Moore.

In 1832 Charlotte left Roehead, keeping up a correspondence with Miss Nussey. She read the standard books, of which her father had a respectable collection, and her remarks are such as might be expected from a clever girl in a secluded parsonage. The question of providing for the family was beginning

to become urgent. Branwell, a lad of great promise, had contracted some dangerous intimacies, and was known in the public-house parlour. He read 'Bell's Life,' took an interest in prize-fighting, and was anxious to see life in London. He had also read the classics, was fond of music, and could play the organ; while he was good-looking, though rather undersized, and had great powers of conversation. It is said that before going to London he could astonish bagmen at the 'Black Bull' by describing the topography of the metropolis. The whole family had certain artistic tastes, and Charlotte took infinite pains in minutely copying engravings until the practice injured her sight. Their father had procured them some drawing lessons from a Mr. W. Robinson of Leeds. Branwell had made acquaintance with some local artists and journalists, and contributed to the poets' corner of local journals. A special friend was Joseph Bentley Leyland, a rising sculptor, born at Halifax. Leyland went to London (December 1833) to study, and afterwards settled there as a sculptor. Branwell, stimulated by his example, made a short visit to London, went to the sights, saw Tom Spring at the Castle Tavern, Holborn, and soon returned, either from his own want of perseverance or because his father could not support him. This was apparently in the later months of 1835.

On 6 July 1835 Charlotte says that she is to be a governess in order to enable her father to pay for Branwell's education at the Royal Academy (GASKELL, i. 147). On 29 July Charlotte went as teacher to Miss Wooler's school, taking Emily with her as pupil. After three months' stay, Emily became 'literally ill from home-sickness,' and returned to Haworth. It was about this time that an incident, the marriage of a girl to a man who, as it turned out, was already married to a wife of deranged intellect, suggested the plot of 'Jane Eyre' (GASKELL, i. 151). Charlotte appears to have been happy at Miss Wooler's, though with occasional fits of depression caused by weak nerves. Her conscientious labour was too much for her strength. Miss Wooler moved her school to Dewsbury Moor, on a tableland, where Charlotte's health suffered still more. Anne was also at the school, and apparently suffered from the change. In 1836 Emily again tried teaching, and passed six months at a school in Halifax, but soon found the burden of her duties and the absence from Haworth intolerable. Charlotte and Anne continued at Miss Wooler's till Christmas 1837, when symptoms of incipient consumption in Anne alarmed Charlotte, and caused the two girls to return. Charlotte had a temporary misunderstanding with Miss Wooler for supposed indifference to Anne's health; and though this was soon removed, and Charlotte was induced to return to her post in the spring of 1838, she found her health finally unequal to the task, and came back to Haworth.

For some time desultory attempts to find employment were the chief incidents of the sisters' lives. It had come to be agreed that Emily was to remain at home; Anne found a situation as governess in the spring of 1839, and spent the rest of her life in various places, where the frequent dependence upon coarse employers seems to have been the source of much misery; Charlotte was a governess for a short time in 1839, and again from March to December 1841, finding kindly and considerate employers on the second occasion. She declined two offers of marriage, one in March 1839 to the prototype of St. John in 'Jane Eyre,' and one in the same autumn from an Irish clergyman. Soon afterwards she wrote and sent to Wordsworth a fragment of a story mentioned in the preface to the 'Professor' as one in which she had got over her taste for the high-flown style. She had already sent some poems to Southey on 29 Dec. 1836, who replied, pointing out the objections to a literary career, in a letter of which she acknowledged the kindness and wisdom (GASKELL, i. 162, 169–175; SOUTHEY, *Life and Correspondence*, vi. 327–30). Branwell had written soon afterwards to Wordsworth (19 Jan. 1837), but apparently no answer was made. Southey's letter had led to Charlotte's abandonment of literature for the time, and it seems from her reply to Wordsworth (GASKELL, i. 211) that his letter, though 'kind and candid,' was equally damping. Marriage and literature being renounced, she began to think of starting a school. The sisters thought that with the help of a loan from Miss Branwell's savings they might adapt the parsonage to the purpose. In 1841 Miss Wooler proposed to give up her school to the Brontës. The offer was eagerly accepted, but it seemed desirable that they should qualify themselves by acquiring some knowledge of foreign languages on the continent. After some inquiries they decided upon entering a school of eighty or a hundred pupils, kept by M. and Mme. Héger in the Rue d'Isabelle, Brussels. Charlotte and Emily went thither in February 1842, their father going with them, and staying one night at the Chapter coffee-house, Paternoster Row, and one night at Brussels. M. Héger was a man of ability and strong religious principles, choleric but benevolent, and an active member of the Society of St. Vincent de Paul. He was professor of rhe-

toric and préfet des études at the Athénée, ultimately resigning his position because he was not allowed to introduce religious instruction. He soon perceived the talents of his new pupils, and, dispensing with the drudgery of grammar, set them to study pieces of classical French literature, and to practise original composition in French. Some of Charlotte's exercises, printed by Mrs. Gaskell, show that she soon obtained remarkable command of the language. Although the sisters profited by this instruction, the general tone of the school was uncongenial; they disliked the Belgians, and the experience only intensified their protestantism and patriotic prejudices. Mary and Martha Taylor, their old friends, were resident in Brussels at this time; but the death of Martha Taylor, the original of Jessie Yorke, in the autumn of 1842, was a severe blow. News of the last illness and death of their aunt, Miss Branwell, reached them soon after. They started immediately for Haworth, and passed the rest of the year at home. The aunt's will, made in 1833, left her money to four nieces, the three Brontës and Anne Kingston. The statement that she disinherited Branwell on account of his ill-conduct is erroneous (Leyland, ii. 31). M. Héger wrote a letter to their father, expressing a high opinion of their talents, and speaking of the possibility of his offering them a position. Charlotte had already begun to give lessons, and it was decided that she should return as a teacher, for a salary of 400 francs, out of which she was to pay for German lessons. She went in January 1843, and stayed till the end of the year. She felt the loneliness of her position, especially when left to herself during the vacation, and a coolness arose between her and Madame Héger, due partly at least to their religious differences. It is probable that she suffered at this time from some unfortunate attachment. Her father's failing eyesight gave an additional reason for her presence at home, and she finally reached Haworth 2 Jan. 1844, with a certificate of her powers of teaching French, signed by M. Héger, and with the seal of the Athénée Royal. Her experiences at Brussels were used in the 'Professor,' and with surprising power in 'Villette,' which is to so great an extent a literal reproduction of her own personal history that some of the persons described complained of minor inaccuracies as though it had been avowedly a matter-of-fact narrative.

The plan of setting up a school was again discussed by the sisters. They could not leave their father, but with the sum left by Miss Branwell they intended to fit the parsonage for receiving pupils. No pupils, however, would come to the remote village, and troubles were accumulating. Branwell's early promise was vanishing. After his visit to London he made some efforts to gain a living by painting portraits. He passed two or three years in desultory efforts, but his want of any serious training was fatal. A portrait of his sisters, described by Mrs. Gaskell, shows that he had some power of seizing a likeness, but was otherwise a mere dauber. He took lodgings at Bradford, joined the meetings of 'the artistic and literary celebrities of the neighbourhood' at the George Hotel (Leyland, i. 203), and rambled about the country. He was a member of the masonic 'Lodge of the Three Graces' at Haworth, of which John Brown, the sexton, was 'worshipful master.' He learnt to take opium, and occasionally drank to excess. On 1 Jan. 1840 he became tutor in the family of Mr. Postlethwaite of Broughton-in-Furness, and soon afterwards wrote a letter to his friend the sexton (*ib.* i. 255–9), which proves sufficiently that he was deeply tainted with vicious habits. He next got a place as clerk on the Leeds and Manchester railroad, being employed at Sowerby Bridge from October 1840, and a few months later at Luddenden Foot. At the beginning of 1842 he was dismissed for culpable negligence in his accounts and the defalcations of a subordinate. After the Christmas holidays in that year he became tutor in a family where Anne was already a governess. Here he appears to have fallen in love with the wife of his employer, seventeen years his senior, and to have misinterpreted her kindness into a return of his affection. When his behaviour became openly offensive, she spoke to her husband, and Branwell was summarily dismissed in July 1845. He bragged to all his friends of his supposed conquest in the fashion of a village Don Juan, and chose to say that the lady acted under compulsion, and was ready to marry him upon her husband's death. Meanwhile he stayed with his father, still writing occasional scraps, and making applications for employment. He became reckless, took opium, and had attacks of delirium tremens. Emily Brontë appears to have tolerated him, Anne suffered cruelly, and Charlotte was indignant and disgusted. She speaks of his 'frantic folly,' says (3 March 1846) that it is 'scarcely possible to stay in the room where he is,' and regards the case as 'hopeless.' If he got a sovereign he spent it at the public-house. In 1846 his late employer died, and Branwell hoped, if, as is charitably suggested, he was under an hallucination, that the widow would marry him. He told his story to every one who would listen, adding that he would mention it to no other human being.

After this he rapidly deteriorated, developed symptoms of consumption, and died 26 Sept. 1848. In his last moments he started convulsively to his feet and fell dead. This incident apparently gave rise to Mrs. Gaskell's statement that he carried out a previous resolution that he would die standing, in order to prove the strength of his will.

These facts must be mentioned, because they explain one cause of the sisters' depression, and because they have unfortunately been misstated. Biographers believed in Branwell's story of the vileness of his employer's wife, and though when first published it was met with an indignant denial and instantly suppressed, it has since been reported as authentic. It rests solely upon the testimony of the pothouse brags of a degraded creature. All the statements which can now be checked are false. The husband's will did not, as Branwell asserted, make the lady's fortune conditional on her not seeing him. On the contrary, it shows complete confidence in her. Branwell did not die with his pocket 'full of her letters.' She never wrote to him, and the letters were from another person (Leyland, ii. 142, 284). The whole may be dismissed as a shameful lie, possibly based in part on real delusion. A claim has been set up for Branwell to a partial authorship of 'Wuthering Heights.' He wrote, even to the last, some poems (many published by Mr. Leyland) which, though often feeble, show distinct marks of the family talent. He had finished by September 1845 one volume of a three-volume novel. He told Mr. Grundy, apparently in 1846, that he had written a great part of 'Wuthering Heights,' and, as Mr. Grundy adds, 'what his sister said bore out the assertion.' Two of his friends also stated (Leyland, ii. 186–8) that Branwell had read to them part of a novel, which, from recollection, they identified with 'Wuthering Heights.' On the other hand, Charlotte Brontë, who was in daily communication with her sisters at every step, obviously had no doubt that it was written by her sister Emily. Her testimony is conclusive. She could not have been deceived, nor is it possible to suppose that Emily would have carried out such a deception. The sisters still consulted Branwell on their work, and Emily was least repelled by him. That he may have given her some suggestions is probable enough; nor is it improbable that the reprobate who was slandering his employer's wife was making a false claim to part of his sister's novel. Stories of this kind are common enough in literary history—'Garth did not write his own "Dispensary"'—and this claim of Branwell's may be dismissed with others of the same class. The internal evidence cannot be discussed; though it may be said that Emily's poems show far higher promise than anything of Branwell's, and so far strengthen her claim to a story of astonishing power. Branwell's habits at this time were as unfavourable to good work as conducive to the disappearance of any fragments he may have written. When Charlotte left Brussels, her father's eyesight was failing. The weak health of Tabby increased the labour of housekeeping. On 25 Aug. 1846 Mr. Brontë underwent a successful operation for cataract. The sisters now turned their thoughts to literature. Charlotte tells M. Héger in 1845 that she had been approved by Southey and (Hartley) Coleridge (Gaskell, i. 321). The latter was known to some of Branwell's friends, and it is said that he and Wordsworth gave some encouragement to Branwell. In the autumn of 1845 Charlotte had accidentally found some poems of Emily's. Anne then confessed to having also written verse; and the three put together a small volume, which was published at their expense in May 1846 by Messrs. Aylott & Jones. It attracted little notice, though reviewed in the 'Athenæum' (4 July 1846). The sisters adopted the pseudonyms Currer, Ellis, and Acton Bell, corresponding to their initials. They next offered their novels, the 'Professor,' 'Wuthering Heights,' 'Agnes Grey,' to various publishers. A refusal of the 'Professor' reached Charlotte on the day of her father's operation, and on the same day she began 'Jane Eyre.' In the spring of 1847, Emily's and Anne's stories were accepted by J. Cautley Newby. Before they had appeared Charlotte received a letter from Messrs. Smith & Elder containing a refusal of the 'Professor,' but 'so delicate, reasonable, and courteous as to be more cheering than some acceptances.' It encouraged her to offer them 'Jane Eyre,' already nearly finished. The reader, the late Mr. W. S. Williams, recognised its great power. It was immediately accepted and published in August 1847. 'Jane Eyre' achieved at once a surprising success. Charlotte had overcome the tendency to fine writing of her first story, and the reaction into dryness of the 'Professor.' She had learnt to combine extraordinary power of expressing passion with an equally surprising power of giving reality to her pictures which transfigures the commonest scenes and events in the light of genius. 'Jane Eyre,' which owed little to contemporary critics, was warmly praised in the 'Examiner,' and by G. H. Lewes in 'Fraser's Magazine' for December; but the rush for copies, 'which began early in De-

cember' (GASKELL, ii. 20), indicated a hold upon public interest which needed no critical sanction. The second edition, dedicated to Thackeray, appeared in January 1848. 'Wuthering Heights' and 'Agnes Grey' were published in December, with comparatively little success. By the next June Anne's 'Tenant of Wildfell Hall' was offered to the same publisher. Hitherto the secret of the authorship of 'Jane Eyre' had been revealed by Charlotte to no one but her father, and to him only after its assured success (GASKELL, ii. 36). It had been conjectured by some readers that the three Bells were in reality one. A foolish and impossible story attributed 'Jane Eyre' to an imaginary governess of Thackeray's, represented by Becky Sharp, who was supposed to have retorted by describing Thackeray as Rochester (*Quarterly Review*, December 1848).

On 28 April and 3 May 1848, Charlotte wrote to Miss Nussey, denying the rumour of its true origin with much vehemence, though with a self-betraying effort to avoid direct falsehood. She had, it seems, promised secrecy to her sisters. Meanwhile, the publisher of Emily's and Anne's novels had promised early sheets of the 'Tenant of Wildfell Hall' to an American house, stating his belief that it was by the author of 'Jane Eyre.' A difficulty arose with Messrs. Smith & Elder, who had promised the next work of the same author to another American firm. They wrote to Miss Brontë, and she, with Anne, immediately went to London in July to clear up the point decisively (REID, p. 89). The sisters went to the Chapter coffee-house and immediately called at Messrs. Smith & Elder's. They refused an invitation to stay at Mr. Smith's house, and, after going to the opera and seeing a few London sights, returned to Haworth, and to severe domestic trials.

Branwell died in September. Emily's health then showed symptoms of collapse. She would not complain, nor endure questioning. Only when actually dying (19 Dec. 1848) she said that she would see a doctor. Shirley Keeldar was Emily's portrait of her sister as she might have been under happier circumstances. The story of the courage with which Shirley burns out the scar of a mad dog's bite was true of Emily. The dog 'Tartar' was Emily's mastiff (Keeper). She once gave him a severe thrashing for a domestic offence, though she had been told that if touched by a stick he would certainly throttle her. The dog, it is added, loved her ever afterwards, followed her to her grave, became decrepit, and died in December 1851 (GASKELL, ii. 239). Emily has been regarded by some critics as the ablest of the sisters. 'Wuthering Heights' and some of the poems give a promise more appreciable by critics than by general readers. The novel missed popularity by the general painfulness of the situation, by clumsiness of construction, and by the absence of the astonishing power of realisation manifest in 'Jane Eyre.' In point of style it is superior, but it is the nightmare of a recluse, not a direct representation of facts seen by genius. Though enthusiastically admired by good judges, it will hardly be widely appreciated. After Emily's death Anne rapidly sickened. Consumption soon declared itself. On 24 May she left Haworth for Scarborough, and died there, after patient endurance of her sufferings, on 28 May 1849. A touching poem, 'I hoped that with the brave and strong,' was her last composition.

For the next few years Charlotte lived alone with her father. She suffered frequently from nervous depression. Household cares troubled her. The old servant Tabby had broken her leg in 1837, when the younger Brontës insisted upon keeping her in the house, though she might have lived in tolerable ease with a sister. In the autumn of 1849 Tabby, now at the age of eighty, had a fit; a younger servant who helped was seriously ill, and Miss Brontë had to do all the housework besides nursing the patients (GASKELL, ii. 122). She still persevered in literary composition, and 'Shirley,' the least melancholy of her stories, was published on 26 Oct. 1849. A Haworth man living at Liverpool easily divined the authorship, and the secret, already transparent, was openly abandoned. On a visit to Mr. George Smith, of Smith & Elder's, in the autumn of the same year, she was introduced to Thackeray and in various literary circles. It is curious that she denied explicitly that the characters in 'Shirley' were 'literal portraits' (GASKELL, ii. 129). Yet it is admitted that an original stood for almost every person, if not for every person, introduced. Besides Shirley herself, who was meant for Emily, Mr. Helstone, who partly represented the elder Brontë, Caroline, who represented Miss Nussey, Mrs. Pryor and Mr. Hall had certainly originals; the whole family of Yorkes were 'almost daguerreotypes' (GASKELL, i. 115), and one of the sons himself confirmed their accuracy; while the 'three curates' not only recognised their own likenesses, but called each other by the names given in the novel. In her last finished story, 'Villette,' the same method is applied to her life at Brussels. A too close reproduction of realities is in fact her

greatest artistic weakness. 'Villette' was finished, after many interruptions caused by ill-health and depression, at the end of 1852, and published in the following spring. Her extreme sensibility was shown by a desire to publish it anonymously, but its success was equal at the time to that of its predecessors.

Miss Brontë had now become famous, and the life at Haworth was interrupted by occasional visits to the friends who had gathered round her, in spite of the extreme shyness of a sensitive nature reared in such peculiar seclusion. Her visit to Mr. Smith in London in the end of 1849 was followed by others in June 1850, in June 1851, and in January 1853. In 1849 she met Thackeray, the contemporary whom she most admired, though she was a little puzzled to know whether he was 'in jest or earnest' in conversation, and complained of what she thought his perversity in satire. She mentions (Gaskell, ii. 162) how she told him of his faults in 1850, and how his excuses were often worse than his crimes. Miss Brontë's sense of humour was feeble. In 1851 she attended one of his lectures, and the author of 'Jane Eyre' found herself the centre of observation to a London audience, and was introduced to Mr. Monckton Milnes (afterwards Lord Houghton). A description of Thackeray's sensitiveness to the opinions of his hearers is adapted to the case of M. Paul Emanuel in 'Villette.' Thackeray's impressions of Miss Brontë are given in a short introduction to a fragment called 'Emma,' published in the 'Cornhill' for April 1860 (i. 485). She made the acquaintance of Sir James Kay-Shuttleworth in 1850, and while staying with him near Bowness the same August met her future biographer, Mrs. Gaskell, with whom she formed a warm friendship. An admiring criticism of 'Wuthering Heights' by Sydney Dobell in the 'Palladium' in September 1850 led to another warm friendship with the author. She met G. H. Lewes, whose early admiration of 'Jane Eyre' had pleased her, though she accepted with some difficulty his advice to study Miss Austen. He hurt her by a review of 'Shirley' in the 'Edinburgh' for January 1850, where she was annoyed by the stress laid upon her sex. 'I can be on my guard against my enemies,' she wrote pithily, 'but God preserve me from my friends!' Lewes appeared to her to be over-confident and dogmatic, but she respected him enough to say that he was guilty rather of 'rough play than of foul play.' Though she made it a duty to read all critiques, she was sensitive under reproof, and especially to any charge against her delicacy. A reviewer of 'Vanity Fair' and 'Jane Eyre' in the 'Quarterly' for December 1848 had brought against her the charge of coarseness. She asked Miss Martineau, whose acquaintance she had made in 1850, to tell her faithfully of any such fault in future novels. Miss Martineau promised and kept her word by condemning 'Villette' upon that and other grounds in the 'Daily News.' Miss Brontë had stayed in Miss Martineau's house, and, though repelled by some of her hostess's religious opinions, had refused to give up the friendship upon that account. This criticism of 'Villette' induced Miss Brontë to signify that their intercourse must cease (Reid, p. 159). Miss Martineau afterwards wrote in the 'Daily News' a generous notice of Miss Brontë on her death.

A third offer of marriage had been made to Miss Brontë in the spring of 1851 by a man of business in good position, and was apparently favoured by her father. In July 1846 she had denied a report of an engagement to her father's curate, Mr. A. B. Nicholls (Gaskell, i. 351; Reid, i. 72). He is alluded to in 'Shirley' as the 'true christian gentleman' who had succeeded the three curates. In December 1852 Mr. Nicholls proposed marriage, and Miss Brontë, though returning his affection, refused him next day at her father's dictation. Mr. Nicholls resigned his curacy and left Haworth. The father's unreasonable indignation gradually calmed as he saw that his daughter's health was suffering. In March 1854 Miss Brontë wrote with his consent to invite Mr. Nicholls to return. She had arranged that the marriage should not disturb her father's seclusion, and should be a gain instead of a loss of money. It took place accordingly on 19 June 1854, and while health lasted was productive of unmixed happiness. After a visit with her husband to his Irish relations she returned to Haworth, where in the next winter her health became precarious. She sank gradually, and died on 31 March 1855.

The father survived her for six years, retaining his interest in public affairs and cherishing all memorials of his daughters. Mr. Nicholls lived with him, and Mr. Raymond, editor of the 'New York Times' (partly repr. in Reid, p. 194), describes an interview with the two. Patrick Brontë died on 7 June 1861. Mr. Nicholls survived till 3 Dec. 1906.

The works published by the three sisters are as follows: 1. 'Poems by Currer, Ellis, and Acton Bell,' 1846. 2. 'Jane Eyre,' 1847. 3. 'Wuthering Heights' and 'Agnes Grey' (3 vols., of which 'Agnes Grey' is the last), 1847. 4. 'The Tenant of Wildfell Hall,' by

Acton Bell, 1848. 5. 'Shirley,' 1849. 6. A new edition of 'Wuthering Heights' and 'Agnes Grey,' with 'Selections from the literary remains of Ellis and Acton Bell,' a biographical notice of Ellis and Acton Bell by Currer Bell, and prefaces to 'Wuthering Heights' and the 'Selections' (of poetry). 7. 'Villette,' 1853. 8. 'Emma' (a fragment) in the 'Cornhill Magazine' for April 1860. All these are comprised, with Mrs. Gaskell's 'Life' and 'Patrick Brontë's Cottage Poems,' in the collective edition in 7 vols. (1872). 'The Haworth edition of the Life and Works of' Charlotte Brontë and her sisters (7 vols. 1899-1900) has introductions by Mrs. Humphry Ward, while Mrs. Gaskell's 'Life' is edited by Mr. Clement K. Shorter.

[Mrs. Gaskell's Life of Charlotte Brontë, 1857 (suppressions and additions in later editions), re-edited with additional letters by C. K. Shorter, 1900; Charlotte Brontë, a monograph, by T. Wemyss Reid, 1877, containing letters to Miss Nussey, some of which had appeared in 'Hours at Home' (New York) for June 1870; Emily Brontë, by A. Mary F. Robinson ('Eminent Women' ser.), with information from Miss Nussey and others; Grundy's Pictures of the Past, pp. 73-93, 1879; Mirror, 28 Dec. 1872 (article by 'January Searle,' G. F. Phillips), a few notices of Branwell Brontë; biographical notices by Charlotte Brontë, as above; Miss Martineau's Biographical Sketches (from the Daily News); The Brontë Family, with special reference to Patrick Branwell Brontë, by Francis A. Leyland, 1886; C. K. Shorter's Charlotte Brontë and her Circle, 1896, and his Charlotte Brontë and her Sisters, 1905.] L. S.

BROOK. [See also BROKE and BROOKE.]

BROOK, ABRAHAM (*fl.* 1789), physicist, was a bookseller of Norwich. He published at Norwich in 1789 a quarto volume of 'Miscellaneous Experiments and Remarks on Electricity, the Air Pump, and the Barometer, with a description of an Electrometer of a new construction.' The work was translated into German and published at Leipzig in 1790. A paper by him, 'Of a new Electrometer,' appeared in the 'Philosophical Transactions' (abridg. xv. 308), 1782. In the same volume (p. 702) in an article by Wm. Morgan on electrical experiments, obligations are acknowledged 'to the ingenious Mr. Brook of Norwich' for 'his method of boiling mercury.'

[Notes and Queries, 3rd ser. v. 355; Watt's Bibl. Brit. i. 154; Phil. Trans. abr. xv. 308, 702.] R. H.

BROOK, SIR BASIL (1576-1646 ?), royalist, eldest son of John Brook of Madeley, Shropshire, and Anne, eldest daughter of Francis Shirley of Staunton Harold, was born in 1576, and was knighted at Highgate on 1 May 1604. In 1615 he was one of the farmers of the ironworks in the Forest of Dean, and shortly afterwards mention occurs of his manufacturing steel under a patent to Elliot and Meysey. This steel, it appears, was worthless; and on 2 July 1619 an order was made directing proceedings to be taken for revoking the patent. In 1624 Dr. William Bishop, bishop of Chalcedon, died in Sir Basil Brook's house at Bishop's Court, near London. Anthony à Wood says: 'Where that place is, except in the parish of St. Sepulchre, I am yet to seek.' Brook is described as 'a person of great account among the English catholics in the reigns of King James I and King Charles I, and of some interest with those princes.' In 1635 he was very active in supporting the cause of the regular clergy against episcopal government in England. He was treasurer of the contributions made by the English catholics towards defraying the king's charges of the war against Scotland. On 27 Jan. 1640-1 the House of Commons made an order requiring Brook and other royalists forthwith to attend the house. He, however, prudently withdrew from London, but he was apprehended at York a year later (January 1641-2). An order was made by the house in August 1642 for removing him from the custody of the serjeant to the king's bench.

Being subsequently implicated in an alleged plot to make divisions between the parliament and the city, and to prevent the advance of the Scots army into England, he was committed close prisoner to the Tower by the House of Commons on 6 Jan. 1643-4. On 6 May 1645 an order was made by the house that Brook should be removed to the king's bench, there to remain a prisoner to the parliament until the first debts by action charged upon him should be satisfied. He was apparently living in July 1646, for in certain articles of peace then framed he is named as one of the papists who, having been in arms against the parliament, were to be proceeded with and their estates disposed of as both houses should determine, and were to be incapable of the royal pardon without the consent of both houses.

Brook married Etheldreda, daughter of Sir Edmund Brudenell, knight. Sir Roger Twysden mentions him as 'a very good, trewe, and worthy person' (*Notes and Queries*, 2nd ser. iv. 103), and Dodd says he was 'handsome and comely.'

He published, with a dedication to Queen Henrietta Maria, 'Entertainments for Lent, written in French by the Rev. F. N. Causin, S.J., and translated into English by Sir B. B.' Lond. 1672, 12mo; Liverpool, 1755, 8vo.

[Notes and Queries, 3rd ser. iv. 81, 136; Calendars of State Papers; Panzani's Memoirs, 178, 179; Cat. of Printed Books in Brit. Mus.; A cunning Plot to divide and destroy the Parliament and the City of London, 1643.] T. C.

BROOK, BENJAMIN (1776–1848), nonconformist divine and historian, was born in 1776 at Nether Thong, near Huddersfield. As a youth he was admitted to membership in the independent church at Holmfield, under the pastoral care of the Rev. Robert Gallond. In 1797 he entered Rotherham College as a student for the ministry. In 1801 he became the first pastor of the congregational church at Tutbury, Staffordshire. Here he pursued his studies, with great research, into puritan and nonconformist history and biography, and published the works on which his historical repute chiefly rests. Resigning his ministerial duties in 1830, from failing health, he went to reside at Birmingham, still continuing his favourite studies, and publishing some of their fruits. He was a member of the educational board of Springhill College, opened August 1838. At the time of his death he was collecting materials for a history of puritans who emigrated to New England. He died at the Lozells, near Birmingham, on 5 Jan. 1848, in his 73rd year. He is said to have been one of the last who retained among the congregationalists the old ministerial costume of shorts and black silk stockings. He published: 1. 'Appeal to Facts to justify Dissenters in their Separation from the Established Church,' 2nd ed. 1806, 8vo (3rd ed. 1815, 8vo, with title 'Dissent from the Church of England justified by an Appeal to Facts'). 2. 'The Lives of the Puritans . . . from the Reformation under Q. Elizabeth to the Act of Uniformity, in 1662,' 1813, 3 vols. 8vo (a most careful and valuable collection, from original sources). 3. 'The Reviewer reviewed,' 1815, 8vo (in answer to an article in the 'Christian Observer' on the 'Lives'). 4. 'The History of Religious Liberty from the first Propagation of Christianity in Britain to the death of George III,' 1820, 2 vols. 8vo. 5. 'Memoir of the Life and Writings of Thomas Cartwright, B.D. . . . including the principal ecclesiastical movements in the reign of Q. Elizabeth,' 1845, 8vo (this is inferior to his 'Lives;' Brook was better in biography than in general history).

[Congregational Year-Book, 1848, p. 214; Bennett's Hist. of Dissenters, 1839, p. 161; private information.] A. G.

BROOK, CHARLES (1814–1872), philanthropist, was born 18 Nov. 1814, in Upperhead Row, Huddersfield. His father, James Brook, was member of the large banking and cotton-spinning firm of Jonas Brook Brothers, at Meltham. Charles Brook lived with his father, who in 1831 had moved to Thornton Lodge; and by 1840 he became partner in the firm. He made many improvements in the machinery, and showed remarkable business talents. He strenuously refused to let his goods measure a less number of yards than was indicated by his labels, and he was bent on promoting the welfare of the two thousand hands in his employ. He knew them nearly all by sight, went to see them when ill, and taught their children in the Sunday school, which he superintended for years (*Huddersfield Examiner*, vol. xx. No. 1471). He laid out a park-like retreat, which he himself planned, for his workpeople at Meltham, and built them a handsome dining-hall and concert-room, with a spacious swimming-bath underneath. His best-known gift is the Convalescent Home at Huddersfield, in the grounds of which again he was his own landscape gardener, the whole costing 40,000*l*. He was constantly erecting or enlarging churches, schools, infirmaries, cottages, curates' houses, &c., in Huddersfield, Meltham, and the district; and on purchasing Enderby Hall, Leicestershire, in 1865, with large estates adjoining, costing 150,000*l*., he rebuilt Enderby church and the stocking-weavers' unsanitary cottages. He died at Enderby Hall, of pleurisy and bronchitis, 10 July 1872, aged nearly 58. A portrait of him, by Samuel Howell, is in the Huddersfield Convalescent Home.

In 1860 Brook married Miss Hirst, a daughter of John Sunderland Hirst of Huddersfield. In politics he was a conservative. Mrs. Brook survived him; but he left no family.

[Huddersfield Weekly News, vol. v. Nos. 248, 249; Huddersfield Examiner, vol. xx. Nos. 1471, 1477; Huddersfield Daily Chronicle, Nos. 1538, 1539, 1542; Times, 12 July 1872, p. 12, col. 1.] J. H.

BROOK, DAVID (*d.* 1558), judge, was of a west-country family living at Glastonbury, Somersetshire. His father, John Brook, was also a lawyer and of the degree of serjeant-at-law; he died on Christmas day 1525, and was buried in the church of St. Mary Redcliffe, Bristol, having been principal seneschal of the neighbouring monastery. David was appointed reader at the Inner Temple in the autumn of 1534, and again in Lent term 1540, when he was also treasurer, and in 1541 he became governor. He was recorder of Bristol (1541–9) and M.P. for the city (1542–4). On 3 Feb. 1547, the first week of

Edward VI's reign, he received the coif, the degree of serjeant-at-law having been bestowed on him as one of the last acts of Henry VIII. On 25 Nov. 1551 he was appointed king's serjeant, and when, two years later (1 Sept. 1553), Sir Henry Bradshaw was removed, he succeeded him as lord chief baron of the exchequer. On 2 Oct., the day after Queen Mary's coronation, Brook and others, according to Machyn, 'were dobyd knightes of the carpet.'

Notices of his judgments continue to occur in Dyer's reports until Hilary term 1557–8, and he died apparently in the course of that term. In March he was succeeded by Sir Clement Heigham. His character is highly praised by Lloyd. He seems to have been a man of strong common sense, and is said to have been especially fond of the maxim, 'Never do anything by another that you can do by yourself.' He was twice married: first to Katherine, daughter of John, lord Chandos; secondly, to Margaret, daughter of Mr. Richard Butler of London, who had already survived two husbands, Mr. Andrew Fraunces and Alderman Robert Chertsey, and, surviving Brook, married Sir Edward North, first baron Guilford, and was buried in the chancel of the church of St. Lawrence Jewry, London. By neither wife had he any issue.

[Foss's Lives of the Judges; Fuller's Worthies, ii. 283; Collins's Historic Peerage, iv. 458; Machyn's Diary, 335 *n.*] J. A. H.

BROOKBANK, BROOKSBANK, or BROOKESBANKE, JOSEPH (*b.* 1612), minister and schoolmaster, was the son of George Brookbank of Halifax, and was born in 1612, for at Michaelmas term 1632, when he entered as a batler at Brasenose College, Oxford, he was aged twenty. He graduated B.A. and took orders. In the Bodleian is the printed petition to the king, in September 1647, from John Brookbank and thirty-three other ministers, expelled from Ireland by the rebels. This John is probably identical with the subject of this article, who is called John on the title-pages of his 'Vitis Salutaris' (1650) and 'Compleat School-Master' (1660). In 1650 Brookbank describes himself as 'at present preacher of the word' at West Wycombe (he spells it Wickham), Buckinghamshire. It is probable that he was settled at Wycombe at the date (1648) of his sermon on the 'Saints' Imperfection,' and possible that he was placed there in the room of Peel, silenced either at High or West Wycombe on 16 Jan. 1640 ('absolutely the first man of all the clergy whom the party began to fall upon,' Walker). Brookbank in 1651 was 'presbyter and schoolmaster in Vine Court, in High Holborn,' where his books were to be bought. At this date he speaks of Sir Edward Richards, knt., and his wife as having been 'pleased to intertain me, when the whole world (as far as I was at that time discoverable thereunto) had thrown me off.' In 1654 he was 'minister and schoolmaster in Jerusalem Court, in Fleet Street.' By 1657 he had lost both employments, and on 4 July 1660 (while living in George Alley, Shoe Lane) he expressed his gratitude to Sir Jeremiah Whitchcot, bart., 'in that, had your good will prevailed without interruption, I had now enjoyed a competent subsistance.' It is possible that he was the I. B. who, early in 1668, published 'A Tast of Catechetical-Preaching-Exercise for the instruction of families, &c.' The writer speaks of himself as being in his 'decaying age,' and proposes a plan of religious services for the young. His name appears as Brookbank in his earliest publication; afterwards as Brooksbank, Brooksbanke, Brookesbanke, and on one of his title-pages as Broksbank. He latinises it into Riparius. His christian name is sometimes printed Jo., and this is expanded into John by mistake. The explanation which he gives of his distance from the press may account for some of the variations in his title-pages. His catechism gives the impression that he was an evangelical churchman; his educational works are careful and clever.

He published: 1. 'Joh. Amos Comenii Vestibulum Novissimum Linguæ Latinæ, &c. Joh. Amos Comenius His Last Porch of the Latin Tongue, &c.,' 1647, 16mo (the Latin of Comenius is given on alternate pages with an English version from the Dutch of Henry Schoof compared with the original). 2. 'The Saints' Imperfection, &c.,' 1646 (but corrected by Thompson to 19 Dec. 1648), 16mo (sermon on Heb. v. 12; the title-page is otherwise faulty; it was reissued with new title-page in 1656). 3. 'Vitis Salutaris: Or, the Vine of Catechetical Divinitie, and Saving Truth, &c.,' 1650, 16mo (a catechism dedicated to parishioners of West Wycombe; a reissue in 1656 has a new title-page, and omits the dedication). 4. 'An English Monosyllabary,' 1651, 16mo (a singular little book, dedicated to Susan, wife of Edward Trussell, and her sister Philadelphia, daughters of Sir Edward Richards; containing in rhythmical form 'all the words of one syllabl, in our English tongue drawne out into a legibl sens;' at the end are a few, prayers in monosyllables). 5. 'Plain, Brief, and Pertinent Rules for the Judicious and Artificial Syllabification of all English Words, &c.,' 1654, 16mo (the account of the author's

plan for the management of a school is curious). 6. 'Two Books more exact and judicious for the Entring of Children to Spell and Read English than were ever yet extant, viz. An English Syllabary, and An English Monosyllabary, &c.,' 1654, 16mo (the second book is simply No. 4, not reprinted; there is a reissue with new title-page as 'The Compleat School-Master,' 1660). 7. 'Orthographia, hoc est, Grammatices Nostræ Regiæ Latinæ Pars prima . . . Cui adjungitur Grammatices ejusdem . . . Synopsis,' 1657, 16mo. 8. 'A Breviate of our Kings whole Latin Grammar, vulgarly called Lillies,' n.d. (dedication dated 4 July 1660). 9. 'The Well-tun'd Organ; or an exercitation wherein this question is discuss'd, whether or no instrumental and organick musick be lawful in holy publick assemblies,' 1660, 4to (Bodleian catalogue). 10. 'Rebels Tried and Cast, in three Sermons, on Rom. xiii. 2, &c.,' 1661, 12mo (Wood). Besides these Brookbank mentions that he had published an Abecedary (before 1651), and in 1650 he had projected a volume, containing the substance of a course of sermons at Wycombe, to be called 'Nilus Salutaris.'

[Wood's Athenæ Oxon. (Bliss), iii. 541; Walker's Sufferings of the Clergy, 1714, ii. 326; works cited above.] A. G.

BROOKE. [See also Broke and Brook.]

BROOKE, Barons. [See Greville, Sir Fulke, first Baron, 1554–1628; Greville, Robert, second Baron, 1608–1643.]

BROOKE, Sir ARTHUR (1772–1843), lieutenant-general, was the third son of Francis Brooke of Colebrooke, co. Fermanagh, and the younger brother of Sir Henry Brooke, who, after representing Fermanagh for many years in the House of Commons, was created a baronet in 1822. He entered the army as an ensign in the 44th regiment in 1792, at the very commencement of the great war, and never left that regiment until the conclusion of the general peace in 1815. He was promoted lieutenant in 1793, and served with the 44th in Lord Moira's division in Flanders in 1794 and 1795. He was promoted captain in 1795, and served with Sir Ralph Abercromby's army in the reduction of the West Indies, where his regiment remained till 1798. He was then present through the Egyptian campaign of 1801, and purchased his majority in 1802. He purchased his lieutenant-colonelcy in 1804, and commanded the 44th in garrison in Malta from 1804 to 1812. In 1813 he was promoted colonel, and accompanied Lord William Bentinck to the east coast of Spain. Brooke, as senior colonel, at once took the command of the brigade to which his regiment was assigned, and distinguished himself in every action against Suchet, and particularly at the combat of Ordal. At the conclusion of the war with Napoleon, Brooke was gazetted a C.B., and ordered to march his own and certain other regiments from Lord William Bentinck's army across the south of France to Bordeaux, in order to embark at that port for an expedition against the United States of America. The whole force embarked consisted of three brigades, commanded by Colonels Brooke, Thornton, and Patterson, and the expedition was under the general command of Major-general Ross [q. v.] In the daring action at Bladensberg victory was secured by the flank movement of Brooke's brigade, which consisted of the 4th regiment, commanded by his brother, Francis Brooke, and his own, the 44th. After burning the Capitol and public buildings of Washington, the expedition re-embarked at St. Benedict and sailed down to the mouth of the Patapsco, where it was arranged that the troops were to land and advance on Baltimore, while the ships' boats were to force their way up the river to co-operate. In the first skirmish that took place after landing, and before the advance commenced, General Ross was killed. 'By the fall of our gallant leader,' says the historian of the expedition, 'the command now devolved on Colonel Brooke, of the 44th, an officer of decided personal courage, but perhaps better calculated to lead a battalion than to guide an army' (Gleig, p. 96). Brooke determined to carry out his predecessor's plan, and though it was reported that Baltimore was defended by 20,000 men, he pushed steadily on, and defeated a powerful force of militia on 12 Sept. Baltimore was then at his mercy; but on finding that the sailors could not come up to his assistance he quietly retired after bivouacking on the scene of his victory. The fleet sailed southward, and was joined at sea by the 95th Gordon Highlanders, and by Major-general Sir John Keane, who superseded Brooke, after delivering to him a most eulogistic despatch from the commander-in-chief. At the close of the war Brooke returned to England, and in 1822 he was nominated governor of Yarmouth. He was also promoted major-general in 1819. He never again saw service, but was made colonel of the 86th regiment (1831), gazetted a K.C.B. in 1833, and promoted lieutenant-general in 1837. He died on 26 July 1843 at his residence, George Street, Portman Square.

[Gleig's Campaigns of the British Army at Washington and New Orleans; Royal Military Calendar; Gent. Mag. 1843, pt. ii. 434–5; Records of 44th Reg.] H. M. S.

BROOKE, SIR ARTHUR DE CAPELL (1791–1858), of Oakley Hall, Northamptonshire, author of several works of travel, was descended from a family originally settled in Cheshire, and was born in Bolton Street, Mayfair, 22 Oct. 1791. He was the eldest son of Sir Richard de Capell Brooke and Mary, only child and heiress of Major-general Richard Worge. Sir Richard, who was the first baronet, had assumed the name Brooke in accordance with his uncle's will, and adopted the name De Capell in lieu of Supple by royal license. The son was educated at Magdalen College, Oxford, where he graduated B.A. 20 May 1813, and M.A. 5 June 1816. On 27 Nov. 1829 he succeeded his father in the title and estates. He entered the army, and in 1846 obtained the rank of major. Much of his early life was spent in foreign travel, especially in the north of Europe. In 1823 he published 'Travels through Sweden, Norway, and Finmark to the North Pole in the Summer of 1820,' which was followed in 1827 by 'A Winter in Lapland and Sweden, with various observations relating to Finmark and its inhabitants made during a residence at Hammerfest, near the North Cape.' These volumes contained much which at the time had the interest of novelty, and a companion volume to the last work was published also in 1827, consisting of a number of splendid illustrative plates from sketches by the author, and entitled 'Winter Sketches in Lapland, or Illustrations of a Journey from Alten, on the shores of the Polar Sea, in 69° 55′ N. L., through Norwegian, Russian, and Swedish Lapland to Tornea, at the entrance to the Gulf of Bothnia, intended to exhibit a complete view of the mode of travelling with reindeer, the most striking incidents that occurred during the journey, and the general character of the scenery of Lapland and Sweden.' In 1837 he published, in two volumes, 'Sketches in Spain and Morocco.' He was an original member of the Travellers' Club, and feeling strongly that latterly many of the newly elected members did not sufficiently represent the spirit of foreign travel, he, in 1821, originated the Raleigh Club, of which he was for many years president, and which became merged in the Royal Geographical Society. He was deputy-lieutenant of Northamptonshire, and in 1843 was chosen sheriff of the county. He was a member both of the Royal Society and of the Royal Geographical Society. Of a reserved and retiring disposition, he was unfitted for the strife of politics, but in his later years he took an active interest in the cause of temperance and in various benevolent and religious objects. He died at Oakley Hall 6 Dec. 1858. He married in 1851 the relict of J. J. Eyre of Endcliffe, near Sheffield, but left no heir, and was succeeded in the title and estates by his brother.

[Debrett's Baronetage; Journal Royal Geogr. Society, xxiv. p. cxxviii; Gent. Mag. 3rd ser. vi. 105; Funeral Sermon, by Rev. T. Lord, 1859; Oxford Graduates.] T. F. H.

BROOKE, CHARLES (1777–1852), jesuit, born at Exeter, 8 Aug. 1777, received his education at the English academy at Liège and at Stonyhurst, where he entered the Society of Jesus, of which he became a professed father (1818). He was provincial of his order from 1826 to 1832, and subsequently was made superior of the seminary at Stonyhurst College. After filling the office of rector of the Lancashire district, he was sent with broken health to Exeter, in 1845, to gather materials for a continuation of the history of the English province from the year 1635, to which period Father Henry More's 'Historia Missionis Anglicanæ Societatis Jesu' extends. The documents and information he collected were afterwards of much service in the compilation of Brother Henry Foley's valuable 'Records of the English Province of the Society of Jesus,' 8 vols. Lond. 1870–83. Father Brooke died at Exeter on 6 Oct. 1852.

[Oliver's Collections S.J. 60; Foley's Records, vii. 88; Tablet, 16 Oct. 1852.] T. C.

BROOKE, CHARLES (1804–1879), surgeon and inventor, son of the well-known mineralogist, Henry James Brooke [q. v.], was born 30 June 1804. His early education was carried on at Chiswick, under Dr. Turner. After this he was entered at Rugby in 1819; thence he went to St. John's College, Cambridge, where he remained five years. He was twenty-third wrangler and B.A. 1827, B.M. 1828, and M.A. in 1853. During a part of this period he studied medicine, and his professional education was completed at St. Bartholomew's Hospital. He passed the College of Surgeons 3 Sept. 1834, and became a fellow of that institution 26 Aug. 1844. He lectured for one or two sessions on surgery at Dermott's School, and afterwards held positions on the surgical staff of the Metropolitan Free Hospital and the Westminster Hospital, which latter appointment he resigned in 1869.

He is known as the inventor of the 'bead suture,' which was a great step in advance in the scientific treatment of deep wounds. On 4 March 1847 he was elected a fellow of the Royal Society. He belonged to the Meteorological and Royal Microscopical Societies, and occupied the president's chair in each of these bodies. He also at various times

served on the management of the Royal Institution and on the council of the Royal Botanical Society. In addition to these he was connected with many philanthropic and religious societies, and was a very active member of the Victoria Institute and Christian Medical Association. His public papers and lectures generally pertained to the department of physics, mathematical and experimental, and his more special work was the inventing or perfecting of apparatus. His papers date back to 1835, when he wrote upon the 'Motion of Sound in Space;' but the work upon which his reputation mainly rests was published between 1846 and 1852. This was the invention of those self-recording instruments which have been adopted at the Royal Observatories of Greenwich, Paris, and other meteorological stations. They consisted of barometers, thermometers, psychrometers, and magnetometers, which registered their variations by means of photography. His method obtained the premium offered by the government, as well as a council medal from the jurors of the Great Exhibition. The account of the perfecting of these apparatus will be found detailed in the British Association Reports from 1846 to 1849, and in the 'Philosophical Transactions' of 1847, 1850, and 1852.

Brooke also studied the theory of the microscope, and was the author of some inventions which facilitated the shifting of lenses, and improved the illumination of the bodies observed. He applied his improved methods to the investigation of some of the best known test-objects of the microscope. His name is, however, most popularly known by means of the 'Elements of Natural Philosophy,' originally compiled by Dr. Golding Bird in 1839, who alone brought out the second and third editions. After his death in 1854, Brooke edited 'a fourth edition, revised and greatly enlarged,' followed by a fifth in 1860. In 1867 he entirely rewrote the work for the sixth edition. He died at Weymouth, 17 May 1879, and his widow died at 3 Gordon Square, London, 12 Feb. 1885, aged 86.

His other publications were: 'The Evidence afforded by the Order and Adaptations in Nature to the Existence of a God. A Christian Evidence lecture,' 1872, which was three times printed, and 'A Synopsis of the Principal Formulæ and Results of Pure Mathematics,' 1829.

[Proceedings of Royal Society of London, 1880, xxx. pp. i–ii; Catalogue of Scientific Papers compiled by Royal Society, i. 653, vii. 273; Medical Times and Gazette, 1879, i. 606.]

J. C. B.

BROOKE, CHARLOTTE (*d.* 1793), authoress, was one of the youngest of the numerous offspring of Henry Brooke, the author of the 'Fool of Quality' [q. v.], and designated herself 'the child of his old age.' She was educated entirely by him, and applied assiduously to literature, art, and music, in all of which she acquired high proficiency. During her father's life her time was mainly devoted to him. Among the subjects of her study was the Irish language, and the first of her productions which appeared in print was an anonymous translation of a poem ascribed to Carolan, in 'Historical Memoirs of Irish Bards,' published in 1786. Soon after the death of her father Miss Brooke was nearly reduced to indigence through the loss of money invested in the manufactory for cotton established by her cousin, Captain Robert Brooke [q. v.] An unsuccessful effort was made by some members of the then newly established Royal Irish Academy at Dublin to obtain a position for her. Her letters to Bishop Percy on this are in Nichols's 'Illustrations' (viii. 247–52). Miss Brooke, in 1789, published at Dublin, by subscription, a quarto volume entitled 'Reliques of Irish Poetry; consisting of heroic poems, odes, elegies, and songs, translated into English verse, with notes explanatory and historical, and the originals in the Irish character.' In this she included 'Thoughts on Irish Song,' and an original composition, styled 'An Irish Tale.' In the publication of this work Miss Brooke was assisted by William Hayley and others; but at the time little accurate knowledge existed of the remains of the more ancient Celtic literature of Ireland. In 1791 Miss Brooke published the 'School for Christians,' consisting of dialogues for the use of children. In the following year she published an edition of some of her father's works, under the circumstances mentioned in the notice of him. Through the subscriptions for that publication and for her 'Reliques of Irish Poetry,' in which many persons of importance interested themselves, Miss Brooke was enabled to retrieve to a small extent the loss of property which she had sustained. A tragedy which she composed, under the title of 'Belisarius,' was submitted to Kemble, and said to have been approved by him, but was eventually reported to have been lost through carelessness. In her latter years Miss Brooke resided at Longford, where she died of malignant fever on 29 March 1793. The publication of a life of Miss Brooke was projected by Joseph C. Walker, who, however, died without having made progress with the work. Some of the papers connected with Miss Brooke came into the possession of Aaron

Crossley Seymour, who, in 1816, printed a memoir of her life and writings, mainly emphasising her religious and charitable temper. The 'Reliques of Irish Poetry' were republished at Dublin in 1818 (8vo).

[Archives of Royal Irish Academy, Dublin; Letter from Mr. [Robert] Brooke, 1786; Anthologia Hibernica, 1793-4; Brookiana, 1804; D'Olier's Memoirs of H. Brooke, 1816.]

J. T. G.

BROOKE, CHRISTOPHER (*d.* 1628), poet, was the son of Robert Brooke, a rich merchant and alderman of York, who was twice lord mayor of that city. Wood states (*Fasti*, ed. Bliss, i. 402) that he was educated at one of the universities. It seems probable that, like his brother Samuel [q. v.], he was a member of Trinity College, Cambridge. He subsequently studied law at Lincoln's Inn, and was 'chamber-fellow' there to John Donne, afterwards dean of St. Paul's. About 1609 he witnessed Donne's secret marriage with the daughter of Sir George More, lieutenant of the Tower; the ceremony was performed by his brother Samuel, and the father of the bride, who opposed the match, contrived to commit Donne and his two friends to prison immediately afterwards. Donne was first released, and secured the freedom of the Brookes after several weeks' imprisonment. Christopher made his way at Lincoln's Inn; he became a bencher and summer reader (1614), and was a benefactor of the chapel. While at the Inns of Court he became acquainted with many literary men, among whom were John Selden, Ben Jonson, Michael Drayton, and John Davies of Hereford. William Browne lived on terms of the greatest intimacy with him, and to Dr. Donne he left by will his portrait of Elizabeth, countess of Southampton. Brooke married Mary Jacob on 18 Dec. 1619 at the church of St. Martin's in the Fields by Charing Cross. He lived in a house of his own in Drury Lane, London, and inherited from his father houses at York, and other property there and in Essex. He was M.P. for York in six parliaments (1604, 1614, 1620, 1624, 1625, 1626), and was also elected for Newport (Isle of Wight) in 1624. He was buried at St. Andrew's, Holborn, 7 Feb. 1627-8. His wife, by whom he had a son John, died before him.

Brooke's works are: 1. An elegy on the death of Prince Henry, published with another elegy by William Browne in a volume entitled 'Two Elegies consecrated to the never-dying Memorie of the most worthily admyred, most hartily loved and generally bewailed prince, Henry, Prince of Wales,' London, 1613. 2. An eclogue appended to William Browne's 'Shepheard's Pipe,' London, 1614. 3. 'The Ghost of Richard the Third. Expressing himselfe in these three parts: 1, His Character; 2, His Legend; 3, His Tragedie,' London, 1614. The unique copy in the Bodleian Library was reprinted by Mr. J. P. Collier for the Shakespeare Society in 1844, and by Dr. Grosart in 1872. It is dedicated to Sir John Crompton and his wife Frances. Mr. Rodd, the bookseller, first attributed this work to Brooke at the beginning of this century. The only direct clue lies in 'C. B.,' the signature of the dedication. George Chapman, William Browne, 'Fr. Dyune Int. Temp.,' George Wither, Robert Daborne, and Ben Jonson contribute commendatory verses. Brooke was well acquainted with Shakespeare's 'Richard III,' and gives it unstinted praise (cf. *Shakespeare's Centurie of Prayse*, New Shakspere Society, p. 109); but his own piece is of small literary value; the verse is, with very rare exceptions, bombastic and harsh. 4. 'Epithalamium —a nuptiall song applied to the ceremonies of marriage,' which appears at the close of 'England's Helicon,' 1614. A manuscript copy of this piece is in the Bodleian. 5. 'A Funerall Poem consecrated to the Memorie of that ever honoured President of Soldyership, Sr Arthure Chichester . . . written by Christopher Brooke, gent.,' in 1624. This poem, to which Wither contributes commendatory verses, was printed for the first time by Dr. Grosart in 1872. The manuscript had been in the possession of Bindley, Heber, and Corser. Corser printed selections in his 'Collectanea,' and Haslewood described it in the 'British Bibliographer,' ii. 235. Brooke also contributed verses to Michael Drayton's 'Legend of the Great Cromwell,' 1607; to Coriat's 'Odcombian Banquet,' 1611; to Lichfield's 'First Set of Madrigals,' 1614 (two pieces, one to the Lady Cheyney and another to the author); and to Browne's 'Britannia's Pastorals,' 1625. He also wrote (20 Dec. 1597) inscriptions for the tombs of Elizabeth, wife of Charles Croft (Stow, *Survey*, ed. Strype), and of the wife of Thomas Crompton.

William Browne had a high opinion of his friend Brooke's poetic capacity. He eulogises him in 'Britannia's Pastorals,' book ii. song 2. In the fifth eclogue of the 'Shepheard's Pipe,' 1615, which is inscribed to Brooke, Browne urges him to attempt more ambitious poetry than the pastorals which he had already completed.

[Christopher Brooke's Poems, reprinted in Dr. Grosart's Miscellanies of the Fuller Worthies Library, 1872; Corser's Collectanea Anglo-Poetica, pt. iii. pp. 123-8; Wood's Fasti, ed. Bliss, i. 401.]

S. L.

BROOKE, Lady ELIZABETH (1601–1683), religious writer, was born at Wigsale, Surrey, in January 1601. Her father was Thomas Colepeper; her mother was a daughter of Sir Stephen Slaney (Parkhurst, *Faithful and Diligent Christian*, p. 41); her only brother was John, afterwards created Lord Colepeper of Thoresway (*ib.* 42). Both parents died in Elizabeth's early youth, and she was brought up by Lady Slaney, her maternal grandmother (*ib.* 43). In 1620 she married Sir Robert Brooke, knight, of the Cobham family, by whom she had seven children, two of whom died in infancy. For two years the young couple resided in London as boarders with Elizabeth's aunt, Lady Weld (*ib.* 45). In 1622 they moved to Langley, Hertfordshire, where Sir Robert bought a seat; and in 1630, on the Brooke estates falling to him, they went to the family mansion, Cockfield Hall, Yoxford, Suffolk. Lady Brooke was an indefatigable reader of the Scriptures, of 'commentaries,' and of the ancient philosophers (in English translations); she took notes of all sermons she heard; she would question her family and servants about them; she engaged a divine to visit the hall once a fortnight as catechist, by whom she was herself catechised; and in 1631 she began a large volume (*ib.* 81) of 'Collections, Observations, Experiences, Rules,' together with 'What a Christian must believe and practise.' On 10 July 1646 her husband died (*ib.* 43), and for two years she absented herself from Cockfield Hall. She afterwards lost two daughters and a son; was harassed by lawsuits (though all these were eventually decided in her favour); and in 1669 her only surviving son, Sir Robert, was drowned in France, leaving her with only one child, Mary, her eldest daughter. She recovered from her griefs sufficiently to resume her charities, but became deaf in 1675, and after a long decay died on 22 July 1683. Nathaniel Parkhurst, her chaplain, and the vicar of the church, preached her 'Funeral Sermon,' and published it (with a portrait) in the following year, together with an account of her life and death. The book was dedicated to Miss Mary Brooke, the sole surviving member of the family. Parkhurst printed with the sermon some of Lady Brooke's 'Observations' and 'Rules for Practice.' A selection from the writings of Lady Brooke was published as late as 1828 in the 'Lady's Monitor,' pp. 61–79.

[Parkhurst's Faithful and Diligent Christian, &c., 1684; Wilford's Memorials of Eminent Persons, art. 'Lady Brooke' and appendix, p. 17; Lady's Monitor, 1828.] J. H.

BROOKE, Mrs. FRANCES (1724–1789), authoress, was born in 1724, being one of the children of the Rev. William Moore by his second wife, a Miss Secker (*Gent. Mag.* lix. part ii. 823, where Edward Moore, her brother, born 1714, is by error set down to be her father). John Duncombe, in the 'Feminiad' (1754), speaks of Frances Moore as a poetic maid, celebrated in a sonnet by Edwards in his 'Canons of Criticism,' and herself writing odes and beautifying the banks of the Thames by her presence at Sunbury, Chertsey, and thereabouts. In 1755 she appeared as an essayist under the pseudonym of Mary Singleton in a weekly periodical of her own, called 'The Old Maid' (price 2*d.*, of 6 pp. folio). She appealed to correspondents for assistance in conducting her paper (after the 'Spectator' model), and in spite of her being attacked by 'an obscure paper, "The Connoisseur," with extreme brutality' (No. II. p. 10), she managed to maintain her publication for thirty-seven weeks. The whole issue was reprinted in a 12mo volume nine years after in 1764. Her marriage took place about 1756, the year of the publication of 'Virginia,' a tragedy, on the title-page of which the authoress appears as Mrs. Brooke. The volume includes other poems, and Mrs. Brooke submits a proposal on a fly-leaf for a translation of 'Il Pastor Fido' (which came to nothing); and she recounts (Preface, viii.) how 'Virginia' had been offered by her to Garrick, who declined to look at it till Mr. Crisp's tragedy of the same name had been published, and ultimately rejected it (Nichols, *Lit. Anecd.* ii. 347; *Biog. Dram.* iii. 383). Her husband was the Rev. John Brooke, D.D., rector of Colney, Norfolk (*Biog. Dram.* i. 71–2), chaplain to the garrison of Quebec, attached to Norwich Cathedral as daily reader there, and, according to Blomefield (*Hist. of Norfolk*, vol. iv.), holding much other preferment in the same county. Soon after their marriage Dr. and Mrs. Brooke left England for Quebec on his garrison duties. The 'European Magazine' (xv. 99 et seq.), repeating 'a newspaper anecdote,' relates that, at a farewell party she gave before taking ship for her voyage, Dr. Johnson had her called to him in a separate room that he might kiss her, which he 'did not chuse to do before so much company.'

In 1763 she published a novel anonymously, 'The History of Lady Julia Mandeville,' containing much description of Canadian scenery, which went rapidly through four editions, with a fifth in 1769, a sixth in 1773, and a special Dublin edition in 1775. In 1764 she published a translation of Madame Riccoboni's 'Lady Juliet Catesby,' still anony-

mously; and this work soon reached a sixth edition. A year or two after she published the 'Memoirs of the Marquis de St. Forlaix,' 4 vols. 12mo, translated into French in 1770 (*Nouvelle Biographie Générale*, vii. 498), which is mentioned by Mrs. Barbauld (*British Novelists*), and is advertised in the 1780 edition of 'Lady Catesby.' In 1769 she published 'Emily Montague,' in 4 vols., with her name affixed, dedicated to Guy Carleton, governor of Quebec. In 1771 she issued, in 4 vols., a translation of the Abbé Milot's French 'History of England,' with explanatory notes of her own; in 1777 she published the 'Excursion,' a novel, 2 vols., in which Garrick is attacked (book v. pp. 20–36). Mrs. Brooke had meanwhile formed a friendship with Mrs. Yates, the actress, and having a share, it was thought, with that lady in the Opera House, produced in 1781 a tragedy, 'The Siege of Sinope,' at Covent Garden Theatre, in which Mrs. Yates acted, and which ran ten nights (*Biog. Dram.* iii. 273). In 1783 Mrs. Brooke made her chief success by 'Rosina,' a musical entertainment in two acts, with Shield's setting, the opening number of which, a trio, 'When the rosy morn appearing,' has not yet disappeared from concert programmes. Mr. and Mrs. Bannister took the chief parts in 'Rosina,' which, Mrs. Brooke said (Preface), was based on the story of Ruth, aided by that of Lavinia and Palemon in Thomson's 'Seasons,' but which, Genest says (*Hist. of the Stage*, vi. 266), was taken, with alterations, from a French opera, 'The Reapers,' published some thirteen years previously. The run of 'Rosina' was extraordinary. There were two editions called for in its first year, 1783 (it was sold for 6*d.*, being used probably as 'a book of the words'); by 1786 there were eleven editions; others followed in 1788 and 1796 (after Mrs. Brooke's death); and the work was reproduced in numberless forms, notably in the 'Modern British Drama,' 1811, the 'British Drama illustrated,' 1864, and in vol. xii. of Dicks's 'British Drama,' 1872. In 1788 Mrs. Brooke, again with Shield's music, produced 'Marian' at Covent Garden Theatre, Mrs. Billington taking the heroine (*Biog. Dram.* vol. iii.); it was acted with success (*ib.*), and kept the stage till 1800, when Incledon was the tenor, but it never attained the popularity of 'Rosina.' Mrs. Brooke's last productions were 'an affectionate eulogium on Mrs. Yates' (Nichols, *Lit. Anecd.* ii. 347) appearing in the 'Gentleman's Magazine,' lvii. 585; and a two-volume tale called by the 'Nouvelle Biog. Gén.' (vii. 498) 'Louisa et Maria, ou les Illusions de la Jeunesse,' and said to have been translated into French in 1820.

Mrs. Brooke died at Sleaford, Lincolnshire, in 1789, on 23 Jan., according to the 'Gentleman's Magazine' (lix. 90), or on 26 Jan. according to the 'European Magazine' (supra) and the 'Biog. Dram.' (i. 71, 72). She was buried at Sleaford, but there does not appear to have been an epitaph to her (Nichols, *Lit. Anecd.* 1815, ix. 497). The following entry is in the parish register: 'Mrs. Frances Brooke, a most ingenious authoriss, æt. 65' (private letter from incumbent, 1884). Dr. Brooke died a few days before his wife, 21 Jan. 1789. A son, the Rev. John Moore Brooke, M.A., fellow of Trinity College, Cambridge, obtained the living of Helperingham, Lincolnshire, in 1784 (*Gentleman's Magazine*, vol. liv. part ii.)

[Reed's Biog. Dram.; Genest's History of the Stage; Gentleman's Magazine; European Magazine; Nichols's Literary Anecdotes, ii. 346; Blomefield's History of Norfolk, vol. iv. under 'Brooks, John;' Preface to Mrs. Brooke's novels, in Mrs. Barbauld's British Novelists, where she is said (p. ii) to have been 'about the first who wrote in a polished style.'] J. H.

BROOKE, GEORGE (1568–1603), conspirator, the fourth and youngest son of William Brooke, lord Cobham, by Frances, daughter of Sir John Newton, was born at Cobham, Kent, on 17 April 1568. He matriculated at King's College, Cambridge, in 1580, and took his M.A. degree in 1586. He obtained a prebend in the church of York, and was later promised the mastership of the hospital of St. Cross, near Winchester, by Queen Elizabeth. The queen, however, died before the vacancy was filled up, and James gave it instead to an agent of his own, James Hudson. This caused Brooke to become disaffected. He and Sir Griffin Markham persuaded themselves that if they could get possession of the royal person they would have it in their power to remove the present members of the council, compel the king to tolerate the Roman catholics, and secure for themselves the chief employments of the state. As part of their arrangements Brooke was to have been lord treasurer. From this scheme sprang the 'Bye' plot, also known as the 'treason of the priests.' To Brooke's connection with the Bye may be ultimately traced the discovery of a second plot, known as the 'Main,' in which Sir Walter Raleigh and Lord Cobham [see Brooke, Henry, *d.* 1619] were implicated. Brooke being the brother of Cobham, Cecil suspected that Cobham and Raleigh might be concerned in the first treason, and by acting at once

vigorously he discovered the second plot. Brooke was arrested and sent to the Tower July 1603; he was arraigned on the 15th. He pleaded not guilty, though his confessions had gradually laid bare the whole details of the plots. Brooke appears to have hoped to the last to obtain a pardon by means of Cecil, who had married his sister. Mrs. Thompson, in the appendix to her 'Life of Raleigh,' gives a letter from Brooke to Cecil, in which the former inquires 'what he might expect after so many promises received, and so much conformity and accepted service performed by him to Cecil.' What these services were is entirely uncertain, but Tytler has endeavoured to build out of this a theory that Cecil himself employed Brooke to arrange the plot, and draw the minister's political opponents into the net, in order that he might be rid of them. This is to the last degree improbable, because Raleigh and Cobham were not concerned in the Bye plot, and were not executed. Brooke, in fact, alone of the lay conspirators suffered on the scaffold in the castle yard at Winchester 5 Dec. 1603. He married Elizabeth, daughter of Thomas, lord Borough, and by her had a son, William, and two daughters. Although his children were restored in blood, his son was not allowed to succeed to the title. Brooke was the author of two poems, which are preserved in the Ashmole MSS.

B. C. S.

BROOKE, GUSTAVUS VAUGHAN (1818–1866), actor, is said in a biographical sketch, presumably dictated by himself, to have been born on 25 April 1818, at Hardwick Place, Dublin, and to have received his education at a school conducted by a brother of Maria Edgeworth. When about fifteen years of age he applied to Calcraft, the manager of the Theatre Royal, Dublin, for an engagement. The manager, embarrassed by a sudden indisposition of Edmund Kean, allowed the youth to appear on Easter Tuesday 1833 as William Tell. An engagement followed, in course of which Brooke played Virginius, Douglas, Rolla, and other characters of the class. He then travelled in the country, and was received with favour in Limerick, Londonderry, Glasgow, Edinburgh, and other places. His first appearance in London took place at the Victoria as Virginius, and attracted little attention. In 1840 he accepted from Macready an engagement to appear at Drury Lane, but was dissatisfied with his part, and threw up the engagement. On 3 Jan. 1848 what was practically his début took place as Othello at the Olympic. A failure at one time seemed imminent, but in the stronger scenes Brooke triumphed, and the performance excited much interest. During this engagement Brooke appeared as Sir Giles Overreach, Richard III, Shylock, Virginius, Hamlet, Brutus, and in one original part, the hero of the 'Lords of Ellingham,' a play by his manager, Mr. Spicer. Refusing liberal offers from Webster for the Haymarket, Brooke returned into the country, but reappeared in London at the Marylebone Theatre, and subsequently under Farren at the Olympic. He then went to America, and played as Othello with unqualified success on 15 Dec. 1851 at the Broadway Theatre, New York. After visiting Philadelphia, Boston, Washington, and Baltimore, he took the Astor Place Opera House, New York, which he opened in May 1852. The experiment was disastrous, and was abandoned after a few weeks. A fresh tour through the United States followed. On 5 Sept. 1853 Brooke reappeared at Drury Lane, then under the management of E. T. Smith. A visit to Australia followed, and was at the outset eminently successful. Brooke once more, in partnership with Coppin, went into management, taking the Theatre Royal, Melbourne. Ruin again came upon him, and he returned to London practically penniless. Upon his reappearance at Drury Lane as Othello he failed to hit the taste of the town. At the beginning of 1866 he started again for Australia. The London, the vessel in which, with his sister, he started, foundered at sea on 10 Jan. 1866, and Brooke, whose conduct throughout the shipwreck has been described by the few survivors as manly and even heroic, perished. He married in his later years Miss Avonia Jones, an actress of no conspicuous merit. Brooke had a fine presence and a noble voice, both of which he turned at first to good account. To the influence of these, rather than to the display of any eminent intellectual gifts, his success was attributable. His first appearance as Othello elicited, however, from men of judgment more favourable criticism than has often been passed upon any actor of secondary mark. When last he appeared in London, his tragic acting was little more than rant. Habits of dissipation interfered with his success. He is said, when fortunate, to have paid in full the claims upon him contracted previous to his insolvency, for which he was not legally liable.

BROOKE, HENRY, eighth LORD COBHAM (*d.* 1619), conspirator, was the son of William, seventh Lord Cobham, by Frances, daughter of Sir John Newton. His father, descended through the female line from the ancient lords of Cobham, was a favourite of Queen Elizabeth, and held the offices of lord warden of the Cinque Ports, constable of the Tower, and lord chamberlain of the queen's household. He was also lord-lieutenant of the county of Kent and knight of the Garter. He twice entertained Elizabeth at Cobham Hall on her progress through Kent (17 July 1559 and 4 Sept. 1573), and was employed in diplomatic missions abroad in 1559 and (with Sir Francis Walsingham in the Netherlands) in 1579. In 1572 he was temporarily confined in the Tower on suspicion of being concerned in the plot to marry Mary Stuart to the Duke of Norfolk. He was buried at Cobham on 5 April 1597. A daughter (Elizabeth) married Sir Robert Cecil. Henry, who was M.P. for Kent (1588–9) and for Hedon (1592–3), succeeded his father in the barony, and secured much of his influence. He was the intimate friend of his brother-in-law Sir Robert Cecil, and therefore the enemy of Essex. Early in 1597 he defeated Essex in a contest for the post of warden of the Cinque Ports, vacant by his father's death. He was made a knight of the Garter in 1599, and entertained the queen at his London house in 1600. One of the objects of Essex's plot of February 1600–1 was the removal of Lord Cobham from court, and when arrested Essex made serious charges against Cobham's political honesty, but he finally acknowledged them to be untrue. The death of Queen Elizabeth saw the end of Cobham's prosperity. In July 1603, while Cecil and the council were engaged in tracking out Watson's well-known plot in behalf of the catholics, suspicion fell on Cobham, whose brother, George Brooke [q. v.], was one of Watson's chief assistants. Sir Walter Raleigh, who was known to have been long on terms of great intimacy with Cobham, was entrusted with the task of obtaining information against him, and vague evidence was forthcoming to show that Cobham had been in negotiation with Aremberg, the ambassador of the Spanish archduke, to place Arabella Stuart on the throne, and to kill 'the king and his cubs.' The alleged plot is usually known as Cobham's or the Main Plot, while Watson's conspiracy goes by the name of the Bye Plot. Cobham was arrested early in July, but the evidence that affected him appeared to the government to implicate Raleigh, who followed Cobham to the Tower within a few days. Cobham thereupon declared in a series of confessions that Raleigh had instigated him to communicate with Aremberg, and that pensions had been promised both of them by Spain. At Raleigh's trial, held at Winchester (17 Nov. 1603), these depositions formed the basis of the accusation. Raleigh begged to be confronted by Cobham in person, but the request was refused, and finally the prosecution produced a very recent letter from Cobham, in which he stated that since he had been in prison Raleigh had entreated him by letter to clear him of the charge; but all that he could do as an honest man was to inform their lordships anew that Raleigh was the original cause of his ruin. On the other hand, Raleigh produced a note just received by him from Cobham, in which the writer asserted his friend's complete innocence. But the judges were convinced of Raleigh's guilt, although Cobham's evidence, even if admitted to be trustworthy, failed to support any distinct charge of treason. On 18 Nov. Cobham himself was tried and convicted; his defence was, as might be expected, cowardly and undignified. A warrant was issued for his execution at Winchester on 10 Dec. (*Egerton Papers*, Camd. Soc. 382), and he, together with Lord Grey and Sir Griffin Markham, was led to the scaffold. Cobham behaved boldly on this occasion, but reiterated his assertion of Raleigh's guilt. James I had, however, no intention of having the full penalty inflicted, and Cobham was taken back to the Tower alive. There, like Raleigh, he remained till 1617, when he was allowed to pay a visit to Bath, on the ground of failing health. He was to return to the Tower in the autumn, and while on his way thither he was seized with paralysis at Odiham. He lingered in a semi-conscious state for more than a year, and died on 24 Jan. 1618–19. The story runs that he died in the utmost destitution, but it appears that the king allowed him 100*l.* a year, and 8*l.* a week for diet, and that these payments were regularly made up to the date of his death. He certainly lay unburied for some time; but that was probably because the crown refused to pay his funeral expenses, which his relatives were anxious that it should incur. Osborne states in his 'Traditionall Memorialls' (*Court of James I*, 1811, i. 156), on the authority of William, earl of Pembroke, that Cobham 'died in a roome, ascended by a ladder, at a poore woman's house in the Minories, formerly his landeresse, rather of hunger than any more naturall disease.' Sir

Anthony Weldon, who describes Cobham as a fool, tells the same story in his 'Court of King James,' 1651.

Cobham married after 1597 the widow of Henry, twelfth earl of Kildare, and daughter of the Earl of Nottingham. She abandoned her second husband after his disgrace, and, although very rich, 'would not,' says Weldon, 'give him the crumbs that fell from her table.' She acted for a few years as governess to the Princess Elizabeth. The crown apparently allowed her to occupy Cobham Hall, and the king visited her there in 1622. Cobham had no children, and his next heir was William, son of his brother George. William was 'restored in blood' in 1610, but not allowed to assume his uncle's title. Charles I, however, in 1645, conferred the barony on a royalist supporter, Sir John Brooke, grandson of George, sixth Lord Cobham, and second cousin of Henry, the eighth lord. Sir John died without issue in 1651.

[Gardiner's Hist. of England, i. 116–39, iii. 154–5; Winwood's Letters, i. 17, ii. 8, 11; Letters of Sir R. Cecil (Camd. Soc.); Stow's Annals, sub 1603; Hasted's Kent, i. 493; Nichols's Progresses of Queen Elizabeth, i. 354, iii. 413; Nichols's Progresses of James I, vol. i. passim, iii. 769–70; Spedding's Bacon, ii. and iii.; Dugdale's Baronage, ii. 202; State Trials, ii. 1–70; Cal. State Papers, 1600–19.] S. L.

BROOKE, HENRY (1694–1757), schoolmaster and divine, was a son of William Brooke, merchant, and his wife Elizabeth Holbrook, who were married at Manchester Church in 1678–9. He was educated at Manchester grammar school, and gained an exhibition 1715–18. He proceeded to Oriel College, Oxford, where he graduated M.A. on 30 April 1720. He was D.C.L. in 1727. Brooke, then a fellow of Oriel, was made headmaster of Manchester grammar school in September 1727. He obtained a mandamus from the crown to elect him a fellow of the collegiate church, and was elected in 1728, in spite of tory opposition. He appears to have been on good terms with John Byrom, a tory Jacobite, but he was unsuccessful as a master, and the feoffees of the school reduced his salary from 200*l.* to 10*l.* In order to put himself into better relations, he published 'The Usefulness and Necessity of studying the Classicks, a speech spoken at the breaking-up of the Free Grammar School in Manchester, Thursday, 13 Dec. 1744. By Hen. Brooke, A.M., High Master of the said School. Manchester, printed by R. Whitworth, Bookseller, MDCCLXIV.' (a misprint for 1744). This tract, now exceedingly rare, is reprinted by Whatton. Howley, the father of the archbishop, and one of his pupils, says that Brooke was 'an accurate and accomplished scholar, though lenient as a disciplinarian.' Another of his works, 'The Quack Doctor,' published in 1745, is described as very poor doggerel, with ironical laudatory notes, probably written by Robert Thyer or the Rev. John Clayton. A Latin tract, 'Medicus Circumforaneus,' is perhaps a translation of the preceding. In 1730 he received the Oriel College living of Tortworth in Gloucestershire. Here he lived, after resigning the mastership of the Manchester grammar school in 1749, until his death on 21 Aug. 1757. Watt attributes to him two sermons 1746, and a sermon 1747. His best known book is 'A Practical Essay concerning Christian Peaceableness,' which went through three editions in the year 1741. The third edition contains some additional matter. He was married, and had one daughter. Brooke left his library for the use of his successors at Tortworth. A portrait of him, as late as 1830, was 'at Mr. Hulton's, of Blackley.'

[Smith's Manchester Grammar School Register, vol. i.; Whatton's History of Manchester Grammar School; Watt's Bibl. Brit.; Rudder's Hist. of Gloucestershire, p. 776; Byrom's Remains (Chetham Society); Raines's Lancashire MSS. vol. xl. (in Chetham's Library, Manchester).] W. E. A. A.

BROOKE, HENRY (1703?–1783), author, was son of the Rev. William Brooke, a protestant clergyman, by his wife, whose name was Digby. William Brooke, who appears to have been related to the family of Sir Basil Brooke, an 'undertaker' in the plantation of Ulster, possessed lands at Rantavan in Cavan, and was rector of Killinkere and Mullagh in that county. He married Lettice, second daughter of Simon Digby, bishop of Elphin. Henry Brooke, the elder of two sons, was born about 1703, and is said to have been educated by Swift's friend, Sheridan. The register of Trinity College, Dublin, shows that he was entered 7 Feb. 1720, 'in his seventeenth year,' from the school of Dr. Jones. He afterwards entered the Temple, London. On his return to Ireland Brooke married a youthful cousin, Catherine Meares of Meares Court, Westmeath, whose guardianship had been entrusted to him. In 1735 he published at London a poem entitled 'Universal Beauty,' which is stated to have been revised and approved of by Pope. This production was supposed to have furnished the foundation for the 'Botanic Garden' by Darwin. Swift is said to have entertained a favourable opinion of Brooke's talents, but to have counselled him against devoting himself solely to literature. In Lon-

don Brooke was treated with much consideration by Lord Lyttelton, and by Pope, near to whose house at Twickenham he took a temporary residence. A translation by Brooke of the first and second books of Tasso's 'Jerusalem Delivered' was issued in 1738. This version was much commended by Hoole, who subsequently translated the entire poem. Brooke received many attentions from Frederick, prince of Wales, to whom he was introduced by Pitt, and with whose political adherents he became identified, in opposition to George II. In 1739 Brooke produced a tragedy founded on a portion of the history of Sweden, and entitled 'Gustavus Vasa, the Deliverer of his Country.' The play was, after five weeks' rehearsal, announced for performance at Drury Lane. Many hundred tickets had been disposed of, when the performance was unexpectedly prohibited by the lord chamberlain. This was ascribed to Sir Robert Walpole, who, it was supposed, was intended to be represented in the character of Trollis, vicegerent of Christiern, king of Denmark and Norway. Nearly one thousand persons subscribed for the publication of 'Gustavus Vasa,' and Brooke, in his prefatory dedication of it to them, stated that patriotism was the single moral which he had in view throughout his play. Under the name of 'The Patriot,' the tragedy was produced with success at Dublin, where some of the sentiments expressed in it relative to Sweden were construed as applicable to Ireland. In connection with the prohibition of the performance at London, Samuel Johnson wrote a satire entitled 'A Complete Vindication of the Licensers of the Stage.' Brooke left London and returned to Ireland owing to the importunities of his wife, who apprehended disastrous results from his imprudent zeal in the cause of the Prince of Wales. To Ogle's modernised version of Chaucer, Brooke in 1741 contributed 'Constantia, or the Man of Law's Tale.' His 'Betrayer of his Country' was successfully acted at Dublin in the same year. Garrick, during his visit to Dublin, recited at the theatre a prologue and epilogue composed for him by Brooke. In 1743 Brooke issued at Dublin a prospectus of a work he described as follows: 'Ogygian Tales; or a curious collection of Irish Fables, Allegories, and Histories, from the relations of Fintane the aged, for the entertainment of Cathal Crove Darg, during that Prince's abode in the island of O Brazil.' Brooke proposed in 1744 to print a history of Ireland from the earliest times, 'interspersed and illustrated with traditionary digressions and the private and affecting histories of the most celebrated of the natives.' The publication was to be comprised in four octavo volumes, each to contain about two hundred pages. To his prospectus he appended a preface addressed 'to the most noble and illustrious descendants of the Milesian line.' These projected publications were abandoned in consequence of misunderstandings as to the ownership of the materials of which Brooke had intended to avail himself. To his studies in this direction may be ascribed the fragment which he named 'Conrade,' the scene of which was laid at Emania, the fortress of ancient kings of Ulster. The style of this production closely resembled that adopted by Macpherson in his 'Ossian.' Brooke contributed some of the best pieces in the 'Fables for the Female Sex' published in 1744 by Edward Moore, author of the 'Gamester.' During the Jacobite movement in 1745 Brooke issued the 'Farmer's Letters to the Protestants of Ireland.' These letters were written in the character of a protestant farmer in Ireland, with the avowed object of rousing his co-religionists there to make preparations against the Jacobite invasion. The peaceable demeanour of the Irish catholics at the time was compared by Brooke to the attitude of the crocodile, which 'seems to sleep when the prey approaches.' The post of barrackmaster, worth about 400*l.* annually, was conferred at this time on Brooke by Lord Chesterfield, in consideration, it was supposed, of these writings, which were highly commended in verse by Garrick. In 1745 'The Earl of Westmoreland,' a tragedy by Brooke, was produced at Dublin, and in 1748 his operatic satire styled 'Jack the Giant-Queller' was performed there. The dramatis personæ consisted of the giants of Wealth, Power, Violence, and Wrong, and 'the family of the Goods,' comprising John, Dorothy, Grace, and the Princess Justice. The repetition of the performance was prohibited by the government on the ground of political allusions which it was alleged to contain. The songs in it were printed in separate form and had a large circulation. In relation to 'Jack the Giant-Queller,' Brooke composed a piece in scriptural style under the title of 'The Last Speech of John Good, vulgarly called Jack the Giant-Queller, who was condemned on the first of April 1745, and executed on the third of May following.' The 'Earl of Essex,' a tragedy by Brooke, was in 1749 produced at Dublin, and subsequently at London. The tragedy originally contained the passage,

Who rule o'er freemen should themselves be free,

which elicited Johnson's parody,

Who drives fat oxen should himself be fat.

In 1754 Brooke, in a publication entitled 'The Spirit of Party,' wrote once more against the Irish catholics, and was in return severely criticised by Charles O'Conor in a pamphlet styled 'The Cottager.' To aid the project of obtaining parliamentary grants for promoting inland navigation, Brooke in 1759 published a work entitled 'The Interests of Ireland.' This he dedicated to James, viscount-Charlemont, whom he panegyrised also in a poem entitled 'The Temple of Hymen.' In 1760 Brooke became secretary to an association of peers and others at Dublin for registering proposals of national utility, with a view to having them presented to parliament. At this period he entered into negotiations with some of the influential Roman catholics in Ireland, and was employed by them to write publicly in advocacy of their claims for a relaxation of the penal laws. Under this arrangement, and with the materials supplied by them to him, Brooke produced a volume published in 1761 at Dublin, with the following title: 'The Tryal of the Cause of the Roman Catholics; on a special Commission directed to Lord Chief Justice Reason, Lord Chief Baron Interest, and Mr. Justice Clemency. Wednesday, August 5th, 1761. Mr. Clodworthy Common-sense, Foreman of the Jury; Mr. Serjeant Statute, Council for the Crown; Constantine Candour, Esq., Council for the Accused.' It advocated an alleviation of the penal laws. Brooke, in connection with this subject, published 'A proposal for the restoration of public wealth and credit by means of a loan from the Roman catholics of Ireland, in consideration of enlarging their privileges.' He also wrote a treatise on the constitutional rights and interests of the people of Ireland, and again contemplated the production of a history of that country. Brooke appears to have been the first conductor of the 'Freeman's Journal,' established at Dublin in 1763. Perpetually 'duped in friendship as well as in charity,' Brooke was necessitated to mortgage his property in Cavan, and became a resident in Kildare, where he rented a house and demesne. In 1766 he commenced the publication of his remarkable novel entitled 'The Fool of Quality; or, the History of Henry, Earl of Moreland.' The first volume was dedicated 'to the right respectable my ancient and well-beloved patron, the public,' with a reply to the question, 'Why don't you dedicate to Mr. Pitt?' The 'Fool of Quality' extended to five volumes, and passed through several editions. The main story and its many episodes are distinguished by simplicity of style, close observation of human nature, high sense of humour, and a profoundly religious and philanthropic temper. The idea of the 'Fool of Quality' was said to have been derived by Brooke from a narrative orally communicated to him by his uncle, Robert Brooke, in the course of a journey on horseback from Kildare to Dublin. In 1772 Brooke published a poem entitled 'Redemption.' His last work was 'Juliet Grenville; or, the History of the Human Heart,' a novel in three volumes, issued in 1774. Garrick, who entertained a high esteem for Brooke, pressed him earnestly to write for the stage, and offered to enter into articles with him for 1*s.* a line for all he should write during life, provided that he wrote for him alone. This proposal, however, we are told, was rejected by Brooke with some degree of haughtiness, for which Garrick never forgave him. From Kildare Brooke removed to a residence in Cavan, near his former habitation, and, as expressed in his own words, continued there 'dreaming life away.' A visitor to Brooke in 1775 described him as 'dressed in a long blue cloak, with a wig that fell down his shoulders. He was a little man, neat as wax-work, with an oval face, ruddy complexion, and large eyes full of fire.' Brooke sank into a state of mental depression on the deaths of his wife and of his children, of whom the sole survivor (out of a family of twenty-two) was his daughter Charlotte [q. v.], who devoted herself entirely to him. Disease and grief rendered him at times incapable of mental or physical exertion. With a view to his pecuniary advantage, some friends undertook, with his assent, to publish a collection of his poetical and dramatic works. Four volumes of these were issued at London in 1778, but in them, through mismanagement, some of the pieces were printed from unrevised copies, others were omitted, and productions of which Brooke was not the author were included in the collection. John Wesley, who had some relations with Brooke's friends, published in 1780 an abridged edition of the 'Fool of Quality.' In his prefatory observations Wesley recommended the work as the most excellent, in its kind, of any that he had seen either in English or in any other language. Charlotte, Brooke's daughter, considered that the failure of her father's mental powers was apparent in the latter portions of the 'Fool of Quality,' and that three volumes would amply contain all that ought to remain in the five. As to his other and last work, 'Juliet Grenville,' 'it is,' she wrote, 'I fear, scarcely worthy of revision, and should be finally consigned to oblivion.' Brooke died in a state of mental debility at Dublin on 10 Oct. 1783. Several portraits of Brooke have been engraved. The

earliest of these appears to be that executed at Dublin in 1756 by Miller, from a painting by Lewis. In the plate, which is inscribed 'The Farmer,' Brooke is represented as seated, with a pen in his hand. This portrait was reproduced in 1884, on a reduced scale, among the illustrations to the work by J. C. Smith on British mezzotinto portraits. A revised edition of Brooke's works was projected by his daughter Charlotte, with the co-operation of friends, but while it was in progress the defective collection already noticed was, without her knowledge, reprinted by a London bookseller. She, however, succeeded in purchasing the copies, and, with such emendations and revisions as she could effect, they were issued by her in four volumes in 1792 as a new edition. To the first volume was prefixed a panegyrical but unsatisfactory notice of Brooke, the writer of which was described by his daughter as an 'old contemporary and relation.' He, however, avowed that he knew little with certainty concerning Brooke's career and the many busy and interesting scenes through which he had passed. On this subject Miss Brooke stated that, in her attempts to procure materials for a memoir of her father, she had encountered great difficulties, and as he had outlived most of his contemporaries, she, his last surviving child, remembered nothing of them before the period of his retirement from the outer world. Some papers connected with Brooke, including a letter from Pope to him, were collected by C. H. Wilson of the Middle Temple, London, who in 1804 issued a compilation in two small volumes entitled 'Brookiana.' The 'Fool of Quality' was republished in two volumes in 1859 by the Rev. Charles Kingsley, who expressed an opinion that, notwithstanding the defects of the work, readers would learn from it more of that which is pure, sacred, and eternal, than from any book published since Spenser's 'Faerie Queene.'

BROOKE, HENRY (1738–1806), painter, was born in Dublin in 1738. He chiefly practised historical painting, and, upon coming to London in 1761, gained both fame and fortune by the exhibition of his pictures. Seven years later, in 1767, he had married and settled in his native city, where he lost the whole of his savings in some foolish speculation. Thenceforward his art was principally displayed in the decoration of Roman catholic chapels, but in 1776 he sent a mythological painting to the Society of Artists. Brooke died in Dublin in 1806.

BROOKE, HENRY JAMES (1771–1857), crystallographer, son of a broadcloth manufacturer, born at Exeter on 25 May 1771, studied for the bar, but went into business in the Spanish wool trade, South American mining companies, and the London Life Assurance Association successively. He devoted his leisure hours to mineralogy, geology, and botany. His large collections of shells and of minerals were presented to the university of Cambridge, while a portion of his valuable collection of engravings was given by him to the British Museum. He was elected F.G.S. in 1815, F.L.S. in 1818, and F.R.S in 1819. He discovered thirteen new mineral species. He died on 26 June 1857. He published a 'Familiar Introduction to Crystallography,' London, 1823; and contributed the important articles on 'Crystallography' and 'Mineralogy' in the 'Encyclopædia Metropolitana,' in which he first introduced six primary crystalline systems.

BROOKE, HUMPHREY (1617–1693), physician, was born in London in 1617. He was educated in Merchant Taylors' School, and entered St. John's College, Oxford, of which he became a fellow. He proceeded M.B. 1646, M.D. 1659, was elected fellow of the London College of Physicians 1674, and was subsequently several times censor. He died very rich at his house in Leadenhall Street, 9 Dec. 1693.

Brooke was the author of 'A Conservatory of Health, comprised in a Plain and Practical Discourse upon the Six Particulars necessary for Man's Life,' London, 1650, and also a book of paternal advice, addressed to his children, under the title of 'The Durable Legacy,' London, 1681, of which only fifty copies were printed. It contains 250 pages of practical, moral, and religious directions, couched in a sincere and simple christian style, with neither sectarianism nor bigotry.

[Wood's Fasti Oxon. (Bliss), i. 514, ii. 91, 221; Munk's College of Physicians (1878), i. 368; Durable Legacy, in British Museum.] G. T. B.

BROOKE, Sir JAMES (1803–1868), rájá of Saráwak, second son of Thomas Brooke, of the Bengal civil service, was born at Benares, and was educated at the grammar school at Norwich, under Mr. Edward Valpy, a brother of the famous Dr. Valpy of Reading. During Brooke's school days Dr. Samuel Parr, who at one time had been the headmaster, was a frequent visitor at the school. 'Old Crome' was the drawing master, while Sir Archdale Wilson, the captor of Delhi in 1857, and George Borrow were among Brooke's schoolfellows. He was a boy of marked generosity, truthfulness, and daring. On one occasion he saved the life of a schoolfellow who had fallen into the river Wensum. He ended his school life somewhat abruptly by running away, and at the age of sixteen was appointed a cadet of infantry in Bengal. After serving for three years with a native infantry regiment, he was appointed to the commissariat; and on the outbreak of the first war with Burma, he formed and drilled a body of native volunteer cavalry, which he commanded in an action at Rangpur in Assam, receiving on that occasion a wound in the lungs, which led to his being invalided home with a wound pension of 70*l.* a year. After an absence of upwards of four years he returned to India; but being unable, owing to an unusually long voyage, to reach Bengal within the prescribed period of five years, he resigned the East India Company's service in 1830, returning to England in the ship in which he had gone out, and visiting, in the course of his voyage, the Straits settlements of Penang, Malacca, and Singapore, China, and Sumatra. During this voyage he seems to have formed the projects which determined his subsequent career. Returning to Bath, where his family resided, in the latter part of 1831, he remained in England until 1834, when he purchased a small brig, and made a voyage to China. In the following year his father died, and Brooke, having inherited a fortune of 30,000*l.*, purchased a schooner of 142 tons, in which, after a trip to the Mediterranean, he sailed on 16 Dec. 1838 for Borneo.

Brooke's motives in undertaking this voyage appear to have been partly love of adventure, and largely the desire to introduce commerce, as well as British ascendency, into Borneo. A memorandum which he wrote upon the subject before starting upon the expedition will be found in a compilation of his private letters, edited by a friend. After a short halt at Singapore, Brooke proceeded in his yacht to Saráwak, on the north-west coast of Borneo, landing at Kuching, the chief town, on 15 Aug. 1839. Saráwak—a tract of country measuring at that time about sixty miles in length by fifty in breadth, but since considerably enlarged by territorial additions made during the lifetime of Brooke—was then subject to the Malay sultan of Brunei, the nominal ruler of the whole of the island, except a part in the south, which had come into the possession of the Dutch. At the time of Brooke's arrival a rebellion was in progress, induced by the tyranny of the officials of the sultan, who had recently deputed his uncle, Muda Hassim, to assume the government and to restore order. Brooke was courteously received by Muda Hassim. His first visit was short; but he seems to have then laid the foundations of the influence which he subsequently acquired over the inhabitants, including the Malay governor, Muda Hassim. On this occasion he surveyed 150 miles of coast, visited many of the rivers, and established a friendly intercourse with the Malay tribes on the coast, spending ten days among a tribe of Dayáks, the aboriginal inhabitants of the island. In the latter part of the same year he visited the island of Celebes. He there astonished the inhabitants, the Bujis—a race much addicted to field sports—by his horsemanship and skill in shooting.

Revisiting Saráwak in the autumn of 1840, Brooke took an active part in the suppression of the rebellion, which was still going on, impressing the natives by his gallantry and readiness of resource, and so entirely gaining the confidence of Muda Hassim that the latter voluntarily offered him the government of the country, which he assumed on 24 Sept. 1841. In July of the following year he repaired to Brunei, and obtained from the sultan the confirmation of his appointment as rájá of Saráwak, in which office he was formally installed at Kuching on 18 Aug. 1842. Sir Spenser St. John's 'Life of Brooke' gives a graphic account of the installation, which very nearly became a scene of bloodshed, owing to the excitement of some of the followers of the late rájá, and their animosity towards a chief named Makota, whose tyranny had done much to bring about the rebellion, and who had obstructed Brooke in his efforts to reduce the country to order, and to improve the administration (Spenser St. John, *Life of Sir James Brooke*, 1879, p. 70).

Brooke's administrative reforms were very simple, but thoroughly well suited to the people. One of the causes of the rebellion had been a system of forced trade, under which the inhabitants were compelled to buy at a fixed, and often an exorbitant, price, commodities sold to them by the chiefs. In default of payment their sons and daughters,

and often their parents as well, were carried off as slaves. Brooke substituted for the forced trade a simple system of taxation in kind, and did what he could to abolish interference with the personal liberty of the people. He administered justice himself, with the aid of some of the chief persons of the country; his court, which was a long room in his own house, being essentially an open one, while he was accessible to any one who wished to see him at nearly all hours of the day. By the Dayáks he was speedily regarded with sentiments of reverence and affection. Their favourite saying was: 'The son of Europe is the friend of the Dayák.' In the earlier years of his residence at Saráwak Brooke was almost alone. His followers were a coloured interpreter from Malacca, useful, but not very trustworthy; a servant who could neither read nor write; a shipwrecked Irishman, brave, but not otherwise useful; and a doctor who never learnt the language of the country.

The suppression of piracy in the Malayan Archipelago does not appear to have been among Brooke's first objects, but it formed one of the main achievements of his useful life. In Borneo piracy had been the common pursuit of the tribes along the coast from time immemorial. It was resorted to in Borneo, not only for purposes of plunder, but for the possession of human heads, for which there was a passion among the Dayáks and among many of the tribes in the archipelago. Brooke had become aware of the practice at an early period of his residence in Saráwak, and had done what he could to impress the chief people of the country with its enormity; but it was not until 1843 that he was in a position to take an active part in its suppression. Early in that year he made the acquaintance, at Singapore, of Captain the Hon. Henry Keppel (now (1886) Admiral the Hon. Sir Henry Keppel, G.C.B.), then commanding H.M.S. Dido, with whom he speedily contracted a mutual and lasting friendship. Returning to Saráwak in the Dido, in company with Keppel, he joined in an expedition against the most formidable of the piratical hordes, the Malays and Dayáks of the Seribas river, taking with him as a contingent a number of war-boats manned by natives of Saráwak. The expedition was extremely successful. The pirates were attacked in their strongholds on the banks of the river by the boats of the Dido and the Saráwak war-boats, and compelled to undertake to abandon piracy. In the following year he was again associated with Keppel in an attack upon the pirates of the Sakarran river, which, though inflicting heavy loss upon the pirates, was attended with severe fighting and some loss to the assailants. Captain Sir Edward Belcher, Captain Rodney Mundy, Captain Grey, and Captain Farquhar were all at different times employed in conjunction with Brooke in operations against the pirates. The last of these operations, which took place in 1849, and dealt a crushing blow to piracy in that part of the Bornean seas, was made the ground of a series of charges of cruel and illegal conduct, preferred against Brooke in the House of Commons by Mr. Hume, and supported by Mr. Cobden, and in some degree by Mr. Gladstone, who, while eulogising Brooke's character, voted for an inquiry into the charges, on the ground that the work of destruction had been promiscuous, and to some extent illegal. The motion for inquiry was discountenanced by the government of the day, that of Lord John Russell, and was rejected by a large majority of the house, Lord Palmerston declaring that Brooke 'retired from the investigation with untarnished character and unblemished honour.' The attacks, however, being continued, the government of Lord Aberdeen subsequently granted a commission of inquiry, which sat at Singapore, but failed to establish any of the charges of inhumanity or illegality which had been made against Brooke.

In 1847 Brooke revisited England, where he met with a most gratifying reception. He was invited by the queen to Windsor, and was treated with great consideration by the leading statesmen of the day, as well as by various public bodies. London conferred upon him the freedom of the city, and Oxford the honorary degree of D.C.L. In connection with his visit to Windsor, it is related that the queen having inquired how he found it so easy to manage so many thousands of wild Borneans, Brooke replied: 'I find it easier to govern thirty thousand Malays and Dayáks than to manage a dozen of your majesty's subjects.' On his return to Borneo he was appointed British commissioner and consul-general in that island, as well as governor of Labuan, which the sultan of Brunei had ceded to the British crown. He was also created a K.C.B. in 1848.

The commission of inquiry not only caused Brooke very great annoyance, but for a time introduced some embarrassment into his relations with the natives under his rule, who not unnaturally conceived the impression that he had forfeited the favour of his own government. The incident is also generally regarded as having, in combination with other circumstances, had some connection with a very serious outbreak on the part of the Chinese immigrants into Saráwak, in which

Brooke narrowly escaped being murdered. This outbreak occurred in 1857, when the Chinese, having formed a plot to kill Brooke and the other Englishmen serving under him, attacked the government house and other English residences, and murdered several of the English. Brooke escaped in the darkness by jumping into the river, diving under the bow of a Chinese barge, and swimming to the other side. After having occupied the capital for a few days, and destroyed a good deal of property, including the rájá's house and his valuable library, the Chinese retired, followed by a large body of Malays and Dayáks, who stood by their rájá, and, intercepting the Chinese in their retreat, destroyed a considerable number of them. The attitude of the Malays and Dayáks on this occasion furnished a signal proof of the affection and confidence with which Brooke had inspired the great majority of his native subjects.

Brooke finally left Saráwak in 1863. Shortly after his return to England a wish long cherished by him, that the British government should recognise his territory as an independent state, was gratified, and a consul was appointed to represent British interests. He died at Burrator in Devonshire in 1868, at the age of sixty-five, after a series of paralytic attacks, brought on doubtless by the fatigues and exposure of a laborious and adventurous life, spent, the greater part of it, in a tropical climate. He was succeeded as rájá by his nephew, Mr. Charles Johnson, who had previously assumed the name of Brooke, and under whose firm but benevolent government, based upon the principles introduced by his illustrious relative, Saráwak, now comprising a territory of 28,000 square miles and a population of a quarter of a million, is a flourishing settlement. Trade has expanded, agriculture is advancing, piracy and head-hunting have been rooted out, education is in demand, and, as a result of the efforts of christian missionaries, Saráwak now numbers nearly three thousand native christians. When this state of things is compared with that which existed on the north coast of Borneo less than half a century ago, it will readily be admitted that among the benefactors of humanity a high place must be accorded to Sir James Brooke.

BROOKE, JOHN (*d.* 1582), translator, son of John Brooke, was a native of Ash-next-Sandwich and owner of Brooke House in that village. Though appointed scholar of Trinity College, Cambridge, by the foundation charter of 1546, he did not proceed B.A. until 1553-4. He married Magdalen Stoddard of Mottingham. He died in 1582, leaving no children, and was buried in Ash church. His works are: 1. 'The Staffe of Christian Faith. . . . Translated out of French into English by John Brooke, of Ashe-next-Sandwiche,' 1577. 2. 'John Gardener, his confession of the Christian Faith. Translated out of French by John Brooke,' 1578, 1583. 3. 'A Christian Discourse . . . presented to the Prince of Conde. Translated by J. B.,' 1578. 4. 'The Christian Disputations, by Master Peter Viret, dedicated to Edmund, Abp. of Canterbury. Translated out of French . . . by J. B. of Ashe,' 1579. 5. 'Of Two Wonderful Popish Monsters, to wyt, Of a Popish Asse which was found in Rome in the riuer Tyber (1496), and of a Moonkish Calfe, calued at Friberge in Misne (1528). . . . Witnessed and declared, the one by P. Melancthon, the other by M. Luther. Translated out of French . . . by John Brooke of Assh. . . . With two cuts of the Monsters,' 1579. 6. 'A Faithful and Familiar Exposition upon the Prayer of our Lorde. . . . Written in French dialogue wise, by Peter Viret, and translated into English by John Brooke. Dedicated to Syr Roger Manwood, knight, and Lorde Chiefe Baron of the Queene's Maiesties Excheker,' 1582.

BROOKE, JOHN CHARLES (1748-1794), Somerset herald, second son of William Brooke, M.D., and Alice, eldest daughter and coheiress of William Mawhood of Doncaster, was born at Fieldhead, in the parish of Silkstone, near Sheffield, in 1748. He was sent to the metropolis to be apprenticed to a chemist in Holborn, but he had already acquired a taste for genealogical research, and having drawn up a pedigree of the Howard family which attracted the favourable notice of the Duke of Norfolk, he thus obtained an entrance into the College of Arms. He was appointed Rouge Croix pursuivant in 1773, and was promoted to the office of Somerset herald in 1777. Two years previously, in 1775, he had been elected a fellow of the Society of Antiquaries. Brooke was secretary

to the earl marshal, and, also through the patronage of the Duke of Norfolk, a lieutenant in the militia of the West Riding of Yorkshire. With Benjamin Pingo, York herald, and fourteen other persons, he was crushed to death on 3 Feb. 1794, in attempting to get into the pit of the Haymarket Theatre. His body was interred in the church of St. Benet, Paul's Wharf, where a monumental tablet was erected to his memory, with an epitaph composed by Edmund Lodge, afterwards Clarenceux king-at-arms.

Brooke made voluminous manuscript collections, chiefly relating to Yorkshire. His father had inherited the manuscripts of his great-uncle, the Rev. John Brooke, rector of High Hoyland in Yorkshire, which had been formed as a foundation for the topography of that county. These came into the hands of John Charles Brooke, who greatly enlarged them by means of his own researches, and by copying the manuscripts of Jenyngs and Tilleyson. A catalogue of these collections will be found in Gough's 'British Topography,' ii. 397, 401, 402. Brooke's contributions to the 'Archæologia' are enumerated in Nichols's 'Illustrations of Literature,' vi. 355. He was a contributor also to the 'Gentleman's Magazine,' and the principal authors of his day in genealogy and topography acknowledge their obligations to him. Besides a history of Yorkshire, he contemplated a new edition of Sandford's 'Genealogical History of the Kings of England,' a baronage after Dugdale's method, and a history of all tenants in capite to accompany Domesday. He bequeathed his manuscripts to the College of Arms, but a small collection of Yorkshire pedigrees by him is preserved in the British Museum (*Addit. MS.* 21184). Many of his letters on antiquarian subjects are printed in Nichols's 'Illustrations of Literature.'

A portrait of Brooke, engraved by T. Milton from a painting by T. Maynard, forms the frontispiece to Noble's 'History of the College of Arms.'

[Nichols's Lit. Anecd. i. 681, 684, iii. 263, vi. 142, 254, 303; Nichols's Illustr. of Lit. vi. 354–429; Noble's College of Arms, 428–434, 440; Addit. MS. 5726 E, art. 3, 5864, f. 116; Notes and Queries (2nd series), iv. 130, 160, 318; Gent. Mag. lxiv. 187, 275, lxvii. 5; Annual Reg. 1794, chronicle 5.] T. C.

BROOKE, RALPH (1553–1625), herald, describes himself (MS. penes Coll. Arm.) as the son of Geoffrey Brooke (by his wife, Jane Hyde) and grandson of William Brooke of Lancashire, who was a cadet of the family of Brooke seated at Norton in Cheshire. But the entry of his admission into Merchant Taylors' School, on 3 July 1564, simply records the fact that his father was Geoffrey, and a shoemaker (*Registers of M.T.S.* i. 6). In 1576 he was made free of the Painter Stainers' Company, and four years afterwards was appointed Rouge Croix pursuivant in the College of Arms. In March 1593 he became York herald, but attained to no higher rank. That he was an accurate and painstaking genealogist there can be no doubt; it seems equally clear that he was of a grasping and jealous nature, and much disliked by his fellow-officers in the Heralds' College. In 1597 Camden, who was not a professional herald, was made Clarenceux king-at-arms in recognition of his great learning. Brooke took umbrage at his intrusion into the college, and published, without date or printer's name, what he termed 'A Discoverie of certaine Errours published in print in the much-commended Britannia 1594, very prejudiciall to the Discentes and Successions of the auncient Nobilitie of this Realme.' To this Camden replied; and Vincent, who had the college with him, sided with Camden and exposed certain mistakes into which Brooke himself had fallen. The controversy was long and acrimonious, the only good result being that, through the researches of Brooke, Camden, and Vincent, the genealogies of the nobility were closely investigated, and the first attempt at a printed peerage was made. Brooke died 15 Oct. 1625, aged 73, and was buried in the church of Reculver, Kent. His quaint monument, whereon he is depicted in his tabard dress, has been often engraved, but it has unhappily disappeared from the newly built church. In addition to the work already mentioned, Brooke wrote 'A Second Discovery of Errors,' which was published from the manuscript by Anstis in 1723; and two editions (1619 and 1622) of 'A Catalogue and Succession of the Kings, Princes, Dukes, Marquisses, Earles, and Viscounts of the Realme of England since the Norman Conquest to this present yeare 1619. Together with their Armes, Wives and Children, the times of their deaths and burials, with any other memorable actions, collected by Raphe Brooke, Esquire, Yorke Herauld, Discouering and Reforming many errors committed by men of other Professions and lately published in Print to the great wronging of the Nobility and prejudice of his Majestie's Officers and Armes, who are onely appointed and sworne to deale faithfully in these causes,' printed by Jaggard.

[Dallaway's Heraldry, 1793, pp. 226–239; Noble's College of Arms; Nichols's Herald and Genealogist, ii.; for a full account of Brooke's quarrel with Vincent and Camden see Sir H. Nicolas's Life of Augustine Vincent (1827).] C. J. R.

BROOKE, RICHARD (1791–1861), antiquary, was a native of Liverpool, where he was born in 1791. His father, also named Richard, was a Cheshire man, who settled in Liverpool early in life, and died there on 15 June 1852, at the age of 91. Richard Brooke the younger practised as a solicitor in Liverpool, and devoted his leisure time to investigations into the history and antiquities of his county, and into certain branches of natural history. One of the favourite occupations of his life was to visit and explore the several fields of battle in England, especially those which were the scenes of conflict between the rival houses of York and Lancaster. The great object he had in view was to compare the statements of the historians with such relics as had survived, and with the traditions of the neighbourhoods where the respective battles had been fought. He was led to this line of research at a comparatively early age during visits to his brother, Mr. Peter Brooke, who resided near Stoke Field. In 1825 he published 'Observations illustrative of the Accounts given by the Ancient Historical Writers of the Battle of Stoke Field, between King Henry the Seventh and John De la Pole, Earl of Lincoln, in 1487, the last that was fought in the Civil Wars of York and Lancaster; to which are added some interesting particulars of the Illustrious Houses of Plantagenet and Neville' (Liverpool, 1825, roy. 8vo). In later years he carried on his researches, and communicated the result to the Society of Antiquaries, of which he was a member, and to the Liverpool Literary and Philosophical Society, in papers which were subsequently published in a volume in 1857, entitled 'Visits to Fields of Battle in England in the Fifteenth Century. To which are added some Miscellaneous Tracts and Papers upon Archæological Subjects' (8vo). The battle-fields described are Shrewsbury, Blore Heath, Northampton, Wakefield, Mortimer's Cross, Towton, Tewkesbury, Bosworth, Stoke, Evesham, and Barnet. The additional papers are: 1. 'On the Use of Firearms by the English in the 15th Century.' 2. 'The Family of Wyche, or De la Wyche, in Cheshire.' 3. 'Wilmslow Church in Cheshire.' 4. 'Handford Hall and Cheadle Church in Cheshire.' 5. 'The Office of Keeper of the Royal Menagerie in the Reign of Edward IV.' 6. 'The Period of the Extinction of Wolves in England.'

He was a member of the council of the Liverpool Literary and Philosophical Society, and read many papers at the meetings of the society. The following, in addition to some of those named above, are printed in its 'Proceedings:' 1. 'Upon the extraordinary and abrupt Changes of Fortune of Jasper, earl of Pembroke,' vol. x. 2. 'Life of Richard Neville, the Great Earl of Warwick and Salisbury, called the King Maker,' xii. 3. 'Life and Character of Margaret of Anjou,' xiii. 4. 'Visit to Fotheringay Church and Castle,' xiii. 5. 'Migration of the Swallow,' xiii. 6. 'On the Elephants used in War by the Carthaginians,' xiv. 7. 'On the Common or Fallow Deer of Great Britain,' xiv. In the 'Transactions of the Historic Society of Lancashire and Cheshire' he published 'Observations on the Inscription of the Common Seal of Liverpool' (i. 76), besides the three Cheshire papers reprinted in the volume of 'visits.' In 1853 he published 'Liverpool as it was during the Last Quarter of the Eighteenth Century, 1775 to 1800' (Liverpool, roy. 8vo, pp. 558). In this he has gathered a body of interesting facts relating to the history of the great port during that period, much of the information being derived from his father. He died at Liverpool on 14 June 1861, in the seventieth year of his age.

[Proceedings of the Society of Antiquaries, 1862, 2nd ser. ii. 105; prefaces to Brooke's works.] C. W. S.

BROOKE, ROBERT (*d.* 1802?), of Prosperous, county Kildare, governor of St. Helena from 1787 to 1801, was youngest son of Robert Brooke, and grandson of the Rev. William Brooke of Rantavan House, county Cavan (BURKE'S *Landed Gentry*, see Brooke of Drumvana). He entered the service of the East India Company on 14 Aug. 1764 as ensign on the Bengal establishment, became lieutenant on 25 Aug. 1765, and substantive captain on 10 Dec. 1767. He signalised himself on several occasions in the operations against Cossim Ali and Soojah Dowlah under Lord Clive, during which time he served with the 8th sepoys. Detached to Madras with two companies of Bengal sepoy grenadiers, he served through the campaigns of 1768–9 against Hyder Ali, with General Joseph Smith, and was subsequently chief engineer of Colonel Wood's force. On one occasion he was sent as envoy to Hyder Ali. Returning to Bengal he was given command of two battalions lent as guards to the Mogul. While so employed he put down a formidable revolt in the province of Corah, for which service he was rewarded with the collectorship of the province, together with a commission of 2½ per cent. on its revenues while in command of the troops on the frontier. He raised the Bengal native light infantry, and commanded that battalion in two campaigns against the hill-

robbers about Rajmahal, in which he distinguished himself by his lenity and humanity no less than by the success of his operations. He also rendered good service against the Mahrattas and in the Rohilla war. His services were acknowledged by the court of directors on 19 April 1771, and again on 30 March 1774, in terms almost unprecedented in the case of an officer of junior rank. He returned home on furlough in 1774, and invested the fortune he had realised by his collectorship at Corah in an attempt to develope the cotton manufacture in Ireland, with which object he erected the industrial village of Prosperous, in the barony of Clane, county Kildare. About the same time he married Mrs. Wynne, *née* Mapletoft, who bore him several children. The enterprise at Prosperous met with patronage and support in distinguished quarters, and in 1776 Brooke received the thanks of parliament for his patriotic endeavours. The manufacturing processes—cotton-printing excepted—are stated to have been carried to some perfection, but in a commercial sense the undertaking proved a failure, and after many vicissitudes the works, counting some 1,400 looms, in 1787 had to be given up for the benefit of the creditors. They were eventually burned by the rebels in 1798. His own fortune and that of his wife having thus been sacrificed, and an elder brother, who was partner in the enterprise, and others having become involved in the ruin, Brooke applied to the court of directors to reinstate him in his former rank, for, having overstayed his leave, he had been struck off the rolls from 14 April 1775. The directors declined to accede to the request, but immediately afterwards appointed him to the governorship of the island of St. Helena, in succession to Governor Corneille. There he displayed much energy. He improved the buildings, strengthened the defences, and established a code of signals. The island became a depôt for the company's European troops, and during his governorship over 12,000 recruits were drilled in its valleys. His spirited measures for seizing the Cape of Good Hope with a small naval squadron carrying a landing-force of 600 light infantry, blue-jackets, marines, and seamen-volunteers, though anticipated by the expedition from home under General Craig and Admiral Keith, won for him the special thanks of the home government. The court of directors recognised his exertions by the gift of a diamond-hilted sword, presented to him in 1799 at St. Helena, at the head of a garrison parade, Brooke then holding local rank as colonel. A serious illness compelled him to embark for England on 10 March 1801, and he died soon after.

Particulars and certificates of his public services in India and in Ireland will be found in the 'British Museum Collection of Political Tracts,' under the heading: 'Brooke, Robt.—A Letter from Mr. Brooke to an Honourable Member of the House of Commons (Dublin, 1787).' A notice of his governorship appears in the 'History of St. Helena' (1808) by Thomas Henry Brooke, for many years colonial secretary on the island, and nephew of Governor Brooke, being a son of Thomas Digby Brooke, the elder brother who was partner in the concern at Prosperous. A few unpublished letters to Warren Hastings in 1773, and from the Marquis Wellesley, are among 'Add. MSS.,' British Museum.

Burke's Landed Gentry; Political Tracts, 1787–8; Dodswell and Miles's Lists of Bengal Army; Warburton's Hist. of Dublin, ii. 971; Brooke's Hist. of St. Helena (2nd ed. 1823); Add. MSS. 29133, 13710, and 13787.]

H. M. C.

BROOKE, Lord. [See Greville.]

BROOKE, SAMUEL (*d.* 1631), master of Trinity College, Cambridge, and archdeacon of Coventry, was the son of Robert Brooke, a rich citizen of York, and was brother of Christopher Brooke, the poet [q. v.] In 1596 he was admitted to Trinity College, Cambridge; he proceeded M.A. 1604, B.D. 1607, and D.D. 1615. Shortly afterwards he was sent to prison, by the agency of Sir George More, for secretly celebrating the marriage of Dr. John Donne with More's daughter, but was soon afterwards released. He was promoted to the office of chaplain to Henry, prince of Wales, who recommended him (26 Sept. 1612) for the divinity chair at Gresham College. He was afterwards chaplain to both James I and Charles I, and obtained notice at court.

In 1614 Brooke wrote three Latin plays, performed before James I on his visit to the university in that year. The names of the plays appear to have been 'Scyros,' 'Adelphe,' and 'Melanthe,' and the 'Adelphe' was described as so witty 'ut vel ipsi Catoni risum excuteret.' On 13 June 1618 he became rector of St. Margaret's, Lothbury, London, and 10 July 1621 was incorporated D.D. at Oxford. He was elected master of Trinity College, Cambridge, 5 Sept. 1629, and on 17 Nov. resigned his Gresham professorship. Prynne, in his 'Canterburie's Doome' p. 157, abuses Brooke as a disciple of Laud, and states that in 1630 Brooke was engaged in 'An Arminian Treatise of Predestination.'

Laud encouraged him to complete this book, but afterwards declined to sanction its publication on account of its excessive violence. On 13 May 1631 Brooke was admitted archdeacon of Coventry, and died 16 Sept. 1631. He was buried without monument or epitaph in Trinity College Chapel. None of Brooke's works appear to have been printed. Besides the treatise already mentioned, he wrote a tract on the Thirty-nine Articles, and a discourse, dedicated to the Earl of Pembroke, entitled 'De Auxilio Divinæ Gratiæ Exercitatio theologica, nimirum: An possibile sit duos eandem habere Gratiæ Mensuram, et tamen unus convertatur et credat; alter non: e Johan. xi. 45, 46.' The manuscript of this discourse is in Trinity College Library.

[Ward's Lives of the Professors of Gresham College, p. 53; Wood's Fasti Oxon. (Bliss) i. 401–2; Cooper's Memorials of Cambridge, ii. 284; Welch's Alumni Westmonast. 19–20; Cole's MS. Athenæ Cantab.; Laud's Works, vi. 292.] S. L.

BROOKE, WILLIAM HENRY (*d.* 1860), satirical draughtsman and portrait-painter, was a nephew of Henry Brooke (1703 ?–1783) [q. v.], the author of 'A Fool of Quality.' He was placed when young in a banker's office. Preferring the studio to the desk, he became the pupil of Samuel Drummond, A.R.A. He made rapid progress, and soon established himself as a portrait-painter in the Adelphi. In 1810 he first exhibited in the Academy. His early works, according to Redgrave, were mere sketches; their subjects: 'Anacreon,' 'Murder of Thomas à Becket,' and 'Musidora.' Between 1813 and 1823 he did not exhibit. In the latter year he sent three pictures, a portrait, and two Irish landscapes with figures. In 1826 he exhibited 'Chastity.' This was the last work which he sent to the Academy. In 1812 he undertook to make drawings for the 'Satirist,' a monthly publication which changed hands several times in its short career, and collapsed finally in 1814. There is little of style or of wit to redeem the pure vulgarity of Brooke's work as a satirist. He contributed to this paper till September 1813, and was then succeeded by George Cruikshank. His drawings for this periodical seem to have brought him some notice, and he illustrated a good many popular books of the day. Among these may be mentioned Moore's 'Irish Melodies,' 1822; Major's edition of Izaak Walton, to which he supplied some vignettes; Keightley's 'Greek and Roman Mythology,' 1831; 'Persian and Turkish Tales;' 'Gulliver's Travels;' Nathaniel Cotton's 'Visions in Verse;' and 'Fables for the Female Sex,' by E. Moore and his uncle, H. Brooke. The last three are undated and published by Walker. None of Brooke's embellishments appear to have had much merit. His best designs, however, are said to have been well drawn. He shows a certain feeling for grace in his delineation of women, though little knowledge. He died at Chichester 12 Jan. 1860.

[Redgrave's Dict. of Artists of the English School; British Museum Catalogues.] E. R.

BROOKE, ZACHARY (1716–1788), divine, the son of Zachary Brooke, of Sidney Sussex College, Cambridge (B.A. 1693–4, and M.A. 1697), at one time vicar of Hawkstoncum-Newton, near Cambridge, was born in 1716 at Hamerton, Huntingdonshire. He was educated at Stamford school, was admitted sizar of St. John's College, Cambridge, 28 June 1734, was afterwards elected a fellow, proceeded B.A. in 1737, M.A. in 1741, B.D. in 1748, and D.D. in 1753. He was elected to the Margaret professorship of divinity at Cambridge in 1765, and was at the same time a candidate for the mastership of St. John's College; was chaplain to the king from 1758, and was vicar of Ickleton, Cambridgeshire, and rector of Forncett St. Mary and St. Peter, Suffolk. He died at Forncett on 7 Aug. 1788. He married the daughter of W. Hanchet. He attacked Dr. Middleton's 'Free Inquiry' in his 'Defensio miraculorum quæ in ecclesia christiana facta esse perhibentur post tempora Apostolorum,' Cambridge, 1748, which appeared in English in 1750. This work called forth several 'Letters' in reply. Brooke was also the author of a collection of sermons, issued in 1763.

[Baker's St. John's College (ed. Mayor), 1029, 1030, 1042; Nichols's Lit. Anecd. i. 563–4, viii. 379; Nichols's Lit. Illustr. iv. 371; Brit. Mus. Cat.] S. L.

BROOKES, JOSHUA (1754–1821), eccentric divine, was born at Cheadle-Hulme, near Stockport, and baptised on 19 May 1754. His father, a shoemaker, who removed soon after his son's birth to Manchester, was a cripple of violent temper, known by the name of 'Pontius Pilate.' He had, however, a genuine affection for his boy, who was educated at the Manchester grammar school, where he attracted the notice of the Rev. Thomas Aynscough, M.A., who obtained the aid which, with a school exhibition, enabled him to proceed to Brasenose College, Oxford, where he graduated B.A. on 17 June 1778 and M.A. on 21 June 1781. In the following year he became curate of Chorlton Chapel, and in December 1790 was appointed chaplain of the collegiate church of Manchester, a posi-

tion which he retained until his death on 11 Nov. 1821. He acted for a time as assistant master at the grammar school, but was exceedingly unpopular with the boys, who at times ejected him from the schoolroom, struggling and shrieking out at the loudest pitch of an unmelodious voice his uncomplimentary opinions of them as 'blockheads.' He was an excellent scholar, and one of his pupils, Dr. Joseph Allen, bishop of Ely, frankly acknowledged, 'If it had not been for Joshua Brookes, I should never have been a fellow of Trinity'—which proved the stepping-stone to the episcopal bench. Brookes was a book collector; but although he brought together a large library, he was entirely deficient in the finer instincts of the bibliomaniac, and nothing could be more tasteless than his fashion of illustrating his books with tawdry and worthless engravings. His memory was prodigious. In his common talk he spoke the broad dialect of the county, and his uncouthness brought him frequently into disputes with the townspeople. He would interrupt the service of the church to administer a rebuke or to box the ears of some unruly boy. A caricature appeared in which he is represented as reading the burial service at a grave and saying, 'And I heard a voice from heaven saying—knock that black imp off the wall!' The artist was prosecuted and fined. Brookes's peculiarities brought him into frequent conflict with his fellow-clergymen. As chaplain of the Manchester collegiate church he baptised, married, and buried more persons than any clergyman in the kingdom. He is described in Parkinson's 'Old Church Clock' as the 'Rev. Joseph Rivers,' and he appears under his own name in the 'Manchester Man' of Mrs. G. Linnæus Banks. In 'Blackwood's Magazine' for March 1821 appeared a 'Brief Sketch of the Rev. Josiah Streamlet,' and that Brookes read it is evident from his annotated copy, which is now in the Manchester Free Library. The article was incorrectly attributed to Mr. James Crossley, but is properly assigned to Mr. Charles Wheeler.

In appearance he was diminutive and corpulent; he had bushy, meeting brows (Parr styled him 'the gentleman with the straw-coloured eyebrows'), a shrill voice, and rapid utterance. He was careless and shabby in his dress, except on Sundays, when he was scrupulously clean and neat. His portrait, from a drawing taken by Minasi a few weeks before his death, has been engraved. His general appearance gained him the nickname of the 'Knave of Clubs,' though he was usually styled 'St. Crispin.'

[Free Thoughts on many Subjects, by a Manchester Man (the Rev. Robert Lamb), London 1866, p. 122; Parkinson's Old Church Clock, 5th edition, with biographical sketch by John Evans, Manchester, 1880; Churton's Life of Nowell, pp. 200, 225; Booker's Hist. of Chorlton Chapel (Chetham Society); an article by John Harland in Chambers's Book of Days, ii. 568; Smith's Manchester Grammar School Register (Chetham Society), i. 109; Songs of the Wilsons, edited by Harland, Manchester, 1865; Bamford's Early Days, p. 292; Banks's Manchester Man, 1876, vol. iii. Appendix; Harland's Collectanea (Chetham Society).] W. E. A. A.

BROOKES, JOSHUA (1761–1833), anatomist, was born on 24 Nov. 1761, and studied anatomy and surgery in London under William Hunter, Hewson, Andrew Marshall, and Sheldon, afterwards attending the practice of Portal and other eminent surgeons at the Hôtel-Dieu, Paris. Returning to London he commenced to teach anatomy and form a museum. He was an accurate anatomist and excellent dissector, and prepared very many of the specimens in his museum. He invented a very useful method of preserving subjects for his lectures and class dissections, so as to preserve a healthy colour and arrest decomposition. For this he was elected F.R.S. His success as a teacher was so great that in the course of forty years more than five thousand pupils passed under his tuition in anatomy and physiology. He was very devoted to the formation of his museum, which from first to last cost him 30,000*l.*, and was second only to that of John Hunter. It included a vast collection of specimens illustrating human and comparative anatomy, morbid and normal. His brother kept the celebrated menagerie in Exeter Change, and thus Brookes easily obtained specimens. In 1826, owing to ill-health brought on by constant presence in the atmosphere of the dissecting-room, he was compelled to leave off teaching; and at a dinner presided over by Dr. Pettigrew he received from the hands of the Duke of Sussex a marble bust of himself, subscribed for by his pupils. After vainly endeavouring to dispose of his museum entire, he was compelled to sell it piecemeal. The final sale took place on 1 March 1830 and twenty-two following days; but very little was realised for Brookes's support in his old age. He died 10 Jan. 1833, in Great Portland Street, London.

His published writings include 'Lectures on the Anatomy of the Ostrich' ('Lancet,' vol. xii.); 'Brookesian Museum,' 1827; 'Catalogue of Zootomical Collection,' 1828; 'Address to the Zoological Club of the Linnean Society,' 1828; 'Thoughts on Cholera,' 1831, proposing most useful hygienic precautions, especially as to the cleansing of the slums;

and a description of a new genus of Rodentia (Trans. Linn. Soc., 1829).

[Museum Brookesianum, Descriptive and Historical Catalogue, 1830; Lancet, 19 Jan., 31 Aug., and 14 Dec. 1833; Memorials of J. F. South, 1884, pp. 103–6.] G. T. B.

BROOKES, RICHARD (*fl.* 1750), physician and author, has left but slight memorials of his life, except numerous compilations and translations on medicine, surgery, natural history, and geography, most of which went through several editions. He was at one time a rural practitioner in Surrey (Dedication of *Art of Angling*). At some time previous to 1762 he had travelled both in America and Africa (Preface to *Natural History*). He was an industrious compiler, especially from continental writers, and his 'General Gazetteer' supplied a manifest want. It has gone through a great number of editions, the principal recent editor being A. G. Findlay.

The following are Brookes's chief writings: 1. 'History of the most remarkable Pestilential Distempers,' 1721. 2. 'The Art of Angling, Rock and Sea Fishing, with the Natural History of River, Pond, and Sea Fish,' 1740. 3. 'The General Practice of Physic,' 1751. 4. 'An Introduction to Physic and Surgery,' 2 vols. 1754. 5. 'The General Gazetteer,' London, 1762. 6. 'A System of Natural History,' 6 vols. 1763. His principal translations are 'The Natural History of Chocolate,' from the French of Quélus, 2nd ed. 1730, and Duhalde's 'History of China,' 4 vols. 1736.

[Brookes's works as above.] G. T. B.

BROOKFIELD, WILLIAM HENRY (1809–1874), divine, was the son of Charles Brookfield, a solicitor at Sheffield, where he was born on 31 Aug. 1809. In 1827 he was articled to a solicitor at Leeds, but left this position to enter Trinity College, Cambridge, in October 1829 (B.A. 1833, and M.A. 1836). In 1834 he became tutor to George William (afterwards fourth Lord) Lyttelton (1817–1876). In December 1834 he was ordained to the curacy of Maltby in Lincolnshire. He was afterwards curate at Southampton, in 1840 of St. James's, Piccadilly, and in 1841 of St. Luke's, Berwick Street. In 1841 he married Jane Octavia, the youngest daughter of Sir Charles Elton of Clevedon Court, Somerset. The wife of Hallam the historian was Sir C. Elton's sister. In 1848 Brookfield was appointed inspector of schools by Lord Lansdowne. He held the post for seventeen years, during part of which time he was morning preacher at Berkeley Chapel, Mayfair. On resigning his inspectorship he became rector of Somerby-cum-Humby, near Grantham. He was also reader at the Rolls Chapel, and continued to reside chiefly in London. In 1860 he was appointed honorary chaplain to the queen, and later chaplain-in-ordinary. He died on 12 July 1874. Mrs. Brookfield died on 27 Nov. 1896 at Walpole Street, Chelsea. A son, Mr. Charles Brookfield, is a well-known actor.

Brookfield was an impressive preacher, and attracted many cultivated hearers. His sermons, which show no special theological bias, have considerable literary merit. He had an original vein of humour, which made even his reports as a school inspector unusually amusing. He had extraordinary powers of elocution and mimicry. As a reader he was unsurpassable, and his college friends describe his powers of amusing anecdote as astonishing. He had the melancholy temperament often associated with humour, and suffered from ill-health, which in 1851 necessitated a voyage to Madeira. He was known to all the most eminent men of letters of his time, some of whom, especially Lord Tennyson and Arthur Hallam, had been his college friends. He was described by his friend Thackeray as 'Frank Whitestock' in the 'Curate's Walk,' and Lord Tennyson contributes a sonnet to his memory in the 'Memoir.' In the same memoir, written by his old pupil and friend Lord Lyttelton, will be found letters from Carlyle, Sir Henry Taylor, Mr. Kinglake, James Spedding, and others.

[Sermons with Memoir, by Lord Lyttelton, 1874; Thackeray's Letters to Mrs. Brookfield (1847–55), 1887; Charles and F. Brookfield's Mrs. Brookfield and her Circle (1809–74), 1905; Times, 3 Dec. 1896.]

BROOKING, CHARLES (1723–1759), marine painter, was 'bred in some department in the dockyard at Deptford, but practised as a ship painter, in which he certainly excelled all his countrymen.' This is the account given by Edwards of a painter of whom now there is little to be known. He was a friend of Dominic Serres. An anecdote told by that artist to Edwards shows that Brooking, like many painters then and now, was in the hands of dealers. They would not allow him to sign his works, and through that prohibition it happened that he found a private patron only when patronage could do him no good. 'He painted seaviews and sea-fights, which showed an extensive knowledge of naval tactics; his colour was bright and clear, his water pellucid, his manner broad and spirited.' By his death, according to the opinion of his time, a painter was lost who promised to stand in the highest rank. In the Foundling Hospital

a fine picture of his is preserved. Godfrey, Ravenet, Canot, and Boydell have engraved his works. He owed his death to his doctor, and was slain, in his thirty-sixth year, by 'injudicious medical advice, given to remove a perpetual headache.' He left his family destitute.

[Edwards's Anecdotes of Painters; Works of Edward Dayes; Redgrave's Dict. of Artists of Eng. School; Bryan's Dict. of Painters, ed. Graves.] E. R.

BROOKS, CHARLES WILLIAM SHIRLEY (1816–1874), editor of 'Punch,' was the son of William Brooks, architect, who died on 11 Dec. 1867, aged 80, by his wife Elizabeth, the eldest daughter of William Sabine of Islington. He was born at 52 Doughty Street, London, 29 April 1816, and after his earlier education was articled, on 24 April 1832, to his uncle, Mr. Charles Sabine of Oswestry, for the term of five years, and passed the Incorporated Law Society's examination in November 1838, but there is no record of his ever having become a solicitor; for the natural bent of his genius impelled him, like Dickens and Disraeli, to lighter studies, and he forsook law for literature.

During five sessions he occupied a seat in the reporters' gallery of the House of Commons, as the writer of the parliamentary summary in the 'Morning Chronicle.' In 1853 he was sent by that journal as special commissioner to inquire into the questions connected with the subject of labour and the poor in Russia, Syria, and Egypt. His pleasant letters from these countries were afterwards collected and published in the sixth volume of the 'Travellers' Library,' under the title of the 'Russians of the South.'

In early times, 1842, he signed his articles which were appearing in 'Ainsworth's Magazine' Charles W. Brooks. His second literary signature was C. Shirley Brooks, and finally he became Shirley Brooks. His full christian names were Charles William Shirley, the latter being an old name in the family. His first magazine papers, among which were 'A Lounge in the Œil de Bœuf,' 'An Excursion of some English Actors to China,' 'Cousin Emily,' and 'The Shrift on the Rail,' brought him into communication with Harrison Ainsworth, Laman Blanchard, and other well-known men, and he soon became the centre of a strong muster of literary friends, who found pleasure in his wit and social qualities. As a dramatist he frequently achieved considerable success, without, however, once making any ambitious effort—such, for example, as producing a five-act comedy. His original drama, 'The Creole, or Love's Fetters,' was produced at the Lyceum 8 April 1847 with marked applause. A lighter piece, entitled 'Anything for a Change,' was brought out at the same house 7 June 1848. Two years afterwards, 5 Aug. 1850, his two-act drama, the 'Daughter of the Stars,' was acted at the New Strand Theatre. The exhibition of 1851 gave occasion for his writing 'The Exposition: a Scandinavian Sketch, containing as much irrelevant matter as possible in one act,' which was produced at the Strand on 28 April in that year.

In association with John Oxenford, he supplied to the Olympic, 26 Dec. 1861, an extravaganza, which had the sensational heading 'Timour the Tartar, or the Iron Master of Samarkand,' the explanatory letterpress significantly stating that a trifling lapse between the year 1361 and the year 1861 occasionally occurs. Amongst his other dramatic pieces may be mentioned the 'Guardian Angel,' a farce, the 'Lowther Arcade,' 'Honours and Tricks,' and 'Our New Governess.'

Brooks was in his earlier days a contributor to many of the best periodicals. He was a leader writer on the 'Illustrated London News,' to which journal at a later period he furnished a weekly article under the name of 'Nothing in the Papers.' He conducted the 'Literary Gazette' 1858–9, and edited 'Home News' after the death of Robert Bell in 1867. To a volume edited by Albert Smith in 1849, called 'Gavarni in London,' he furnished three sketches—'The Opera,' 'The Coulisse,' and 'The Foreign Gentleman;' and in companionship with Angus B. Reach he published 'A Story with a Vengeance' in 1852. At thirty-eight years of age he began to assert his claim to consideration as a popular novelist by writing 'Aspen Court: a Story of our own Time.' Conscious, as he must have been, of his first success of a substantial kind as an imaginative writer, he nevertheless allowed five years to elapse before he made his second venture as a novelist. He did so then as the author of a new serial fiction, the 'Gordian Knot,' in January 1858; but this work, although illustrated by J. Tenniel, and consisting of twelve numbers only, remained unfinished for upwards of two years.

The most important and interesting event in Shirley Brooks's life was his connection with 'Punch,' which took place in 1851. He made use of the name 'Epicurus Rotundus' as the signature to his articles. From this period to his decease he was a contributor to the columns of that periodical, and in 1870 he succeeded Mark Lemon as editor. One of

his best known series of articles was 'The Essence of Parliament,' a style of writing for which he was peculiarly fitted by his previous training in connection with the 'Morning Chronicle.'

On 14 March 1872 Brooks was elected a fellow of the Society of Antiquaries. He was always a hard and industrious worker, and the four years during which he acted as editor of 'Punch' formed no exception to the rule. Death found him in the midst of his books and papers working cheerfully amongst his family. Two articles, 'Election Epigrams' and 'The Situation,' were written on his death-bed, and before they were published he was dead.

He died at 6 Kent Terrace, Regent's Park, London, on 23 Feb. 1874, and was buried in Kensal Green cemetery on 28 Feb.

He married Emily Margaret, daughter of Dr. William Walkinshaw of Naparima, Trinidad. She was granted a civil list pension of 100*l.* on 19 June 1876, and died on 14 May 1880.

The works by Brooks not already mentioned are: 1. 'Amusing Poetry,' 1857. 2. 'The Silver Cord, a Story,' 1861, 3 vols. 3. 'Follies of the Year,' by J. Leech, with notes by S. Brooks, 1866. 4. 'Sooner or Later,' with illustrations by G. Du Maurier, 1866-68, 3 vols. 5. 'The Naggletons and Miss Violet, and her Offer,' 1875. 6. 'Wit and Humour, Poems from "Punch,"' edited by his son, Reginald Shirley Brooks, 1875.

BROOKS, FERDINAND. [See GREEN, HUGH.]

BROOKS, GABRIEL (1704–1741), calligrapher, born in 1704, was apprenticed to Dennis Smith, a writing-master 'in Castle Street in the Park, Southwark,' and kept a day school in Burr Street, Wapping, until his death in 1741. Dennis Smith's widow married a supposed relation of his, William Brooks, who in 1717, when only twenty-one years old, published a work entitled 'A Delightful Recreation.' Very little remains of Brooks's skill in penmanship—only a few plates scattered through that rare folio work on calligraphy entitled 'The Universal Penman, or the Art of Writing made useful . . . written with the assistance of several of the most eminent Masters, and Engraved by George Bickham,' London, 1741. These elegantly executed plates (nine in all) consist of No. 29, 'Idleness;' 33, 'Discretion;' 38, 'Modesty;' 66, 'Musick;' No. 2 after 66, 'To the Author of the Tragedy of Cato;' 68, 'Painting;' No. 1 after 68, 'On Sculpture' (signed A.D. 1737); one unnumbered, 'Liberty;' and one on 'Credit' in the second part of the work relating to merchandise and trade.

[Massey's Origin of Letters; Moore's Invention of Writing; Bickham's Universal Penman.]

J. W.-G.

BROOKS, JAMES (1512–1560), bishop of Gloucester, born in Hampshire in May 1512, was admitted a scholar of Corpus Christi College, Oxford, in 1528, and a fellow in January 1531–2, being then B.A. After graduating M.A. he studied divinity and was created D.D. in 1546. In the following year he became master of Balliol College. He was vice-chancellor of Oxford in 1552. He was chaplain and almoner to Bishop Gardiner (STRYPE, *Cranmer*, 310, 374, fol.), and after Queen Mary's accession he was elected bishop of Gloucester, in succession to John Hooper, at whose trial he assisted (STRYPE, *Eccl. Memorials*, iii. 180, fol.) He was consecrated in St. Saviour's Church, Southwark, on 1 April, and received restitution of the temporalities on 8 May 1554 (LE NEVE, *Fasti*, ed. Hardy, i. 437). In 1555 he was delegated by the pope to examine and try Cranmer, Ridley, and Latimer; and in 1557-8 Cardinal Pole appointed him his commissioner to visit the university of Oxford (STRYPE, *Eccl. Memorials*, iii. 391, fol.) On Queen Elizabeth's accession he was deprived of his see for refusing to take the oath of supremacy, and was committed to prison, where he died in the beginning of February 1559-60 (DODD, *Church Hist.* i. 499). He was buried in Gloucester Cathedral, but no monument was erected to his memory. Wood describes him as 'a person very learned in the time he lived, an eloquent preacher, and a zealous maintainer of the Roman catholic religion' (*Athenæ Oxon.* ed. Bliss, i. 315), but Bishop Jewel says he was 'a beast of most impure life, and yet more impure conscience' (*Letter to Peter Martyr*, 20 March 1559–60).

His works are: 1. 'A Sermon, very notable, fruictefull, and godlie, made at Paules Crosse, the xii. daie of Nouembre in the first yere of Quene Marie,' Lond. 1553, 8vo, 'newly imprinted and somewhat augmented,' 1554. His text was Matt. ix. 18, 'Lord, my daughter is even now deceased.' These words he applied to the kingdom and church of England, upon their late defection from the pope, but the protestants censured

the sermon, saying that he had made himself to be Jairus, England his daughter, and the queen Christ (Strype, *Eccl. Memorials*, iii. 74, fol.) 2. Oration in St. Mary's Church, Oxford, on 12 March 1555, addressed to Archbishop Cranmer. 3. Oration at the close of Archbishop Cranmer's examination. These two orations are printed in Foxe's 'Acts and Monuments.'

[Ames's Typogr. Antiq. (Herbert), 829; Cotton. MS. Vespasian, A, xxv. 13; Cranmer's Works (Cox), ii. 212, 214, 225, 383, 446, 447, 454, 455, 456, 541; Dodd's Church Hist. i. 498; Foxe's Acts and Monuments; Godwin, De Præsulibus (Richardson), 552; Jewell's Works (Ayre), iv. 1199, 1201; Lansd. (Bliss), i. 314, ii. 791; Zurich Letters, i. 12.] T. C.

BROOKS, JOHN (*fl.* 1755), engraver, was a native of Ireland, and his first known work was executed in line-engraving at Dublin in 1730. The skill and industry of Brooks in his early years appeared in a copy which he made in pen and ink from a plate of Richard III by Hogarth, who is said to have mistaken it for his own engraving. The earliest engraved portrait of Mrs. Woffington is that by Brooks, and bears the date of June 1740. Between 1741 and 1746 Brooks produced at Dublin several mezzotinto portraits and engravings. About 1747 he settled in London, and engaged in the management of a manufactory at Battersea for the enamelling of china in colours by a process which he had devised. The articles produced were ornamented with subjects chiefly from Homer and Ovid, and were greatly admired for the beauty of the designs and the elegance and novelty of the style in which they were executed. The manufactory was for a time successful, but led eventually to the bankruptcy of its chief proprietor, Stephen Theodore Janssen, lord mayor of London for 1754–5. Brooks continued in London as an engraver and enameller of china. He is said to have spent much of his later years in dissipation, and there are no records of his works during that period, or of the date of his death. Some of the pupils of Brooks highly distinguished themselves as engravers in mezzotinto. Among them was James MacArdell, one of the most eminent masters of that art. A catalogue of the works of Brooks was for the first time published some years since by the writer of the present notice, and to it some additions were made in 1878 in the work by J. C. Smith on British mezzotinto portraits.

[Dublin Journal, 1742–6; Anthologia Hibernica, 1793; Hist. of Dublin, 1856.] J. T. G.

BROOKS, THOMAS (1608–1680), puritan divine, was probably of a pious puritan family settled in some rural district. He matriculated as pensioner of Emmanuel on 7 July 1625. He was doubtless licensed or ordained as a preacher of the gospel about 1640. In 1648 he was preacher at St. Thomas Apostle. At an earlier date Brooks appears to have been chaplain to Rainsborough, the admiral of the parliamentary fleet; he was afterwards chaplain to the admiral's own son, Colonel Thomas Rainsborough, whose funeral sermon he preached in November 1648. In the same year (26 Dec.) he preached a sermon before the House of Commons, and a second sermon to the Commons on 8 Oct. 1650. In 1652–3 he was transferred to St. Margaret's, Fish-street Hill. There he met with some opposition, which occasioned his tract, 'Cases considered and resolved; . . . or Pills to purge Malignants,' 1653, and in the same year he published his 'Precious Remedies.' In 1662 he was one of the ejected. After preaching his farewell sermon (an analysis of which is in Palmer's 'Memorial') in 1662, he continued his ministry in a building in Moorfields. In the plague year he was at his post, and published his 'Heavenly Cordial' for such as had escaped. The extreme rarity of this little volume is said to be owing to the great fire of London, which destroyed the entire stock of so many books. His thoughts on this 'fiery dispensation' are recorded in his 'London's Lamentations,' published in 1670. Baxter mentions Brooks respectfully as one of the independent ministers who held their meetings more publicly after the fire of London than before. About 1676 his first wife died, and he published an account of her 'experiences,' with a funeral sermon preached by a friend. Shortly afterwards he married a young woman named Cartwright. His will is dated 20 March 1680. He died on 27 Sept., aged 72. A copy of his funeral sermon, by John Reeve, dated 1680, is in Dr. Williams's library.

More than fifty editions of several of his books have been published. The Religious Tract Society long continued to reprint some of Brooks's writings; the greater part of his smaller pieces were also constantly kept in stock by the Book Society. Dr. Grosart's notes on the early editions contain much information. The first editions are as follows:

1. 'The Glorious Day of the Saints,' a funeral sermon for Colonel Rainsborough, 1648. 2. 'God's Delight in the Upright,' a sermon to the House of Commons, 1648-9. 3. 'The Hypocrite detected,' thanksgiving sermon for victory at Dunbar, 1650. 4. 'A Believer's Last Day his Best Day,' a funeral sermon for Martha Randall, 1651-2. 5. 'Precious Remedies against Satan's Devices,' 1652. 6. 'Cases considered and resolved,' 1652-3. 7. 'Heaven on Earth' (on assurance), 1654. 8. 'Unsearchable Riches of Christ,' 1655. 9. 'Apples of Gold,' funeral sermon for Jo. Wood, 1657. 10. 'String of Pearls,' funeral sermon for Mary Blake, 1657. 11. 'The Silent Soul, or Mute Christian under the Smarting Rod,' 1659. 12. 'An Arke for all God's Noahs,' 1662. 13. 'The Crown and Glory of Christianity,' 1662. 14. 'The Privie Key of Heaven,' 1665. 15. 'A Heavenly Cordial,' for the plague, 1665. 16. 'A Cabinet of Choice Jewels,' 1669. 17. 'London's Lamentations' (on the great fire), 1670. 18. 'A Golden Key' and 'Paradise opened,' 1675. Besides these Brooks wrote epistles prefixed to Susannah Bell's 'Legacy of a Dying Mother,' 1673; to Dr. Everard's 'Gospel Treasury,' 1652; to the works of Dr. Thomas Taylor, 1653; and to John Durant's 'Altum Silentium,' 1659; also the 'Experiences of Mrs. Martha Brooks,' wife to Thomas Brooks, appended to her funeral sermon by J. C. (Dr. John Collinges, of Norwich?), 1676. To this Brooks added notes. Some select works of Brooks were published under the editorship of the Rev. Charles Bradley in 1824; the 'Unsearchable Riches' was included in Ward's Standard Library. The best of his sayings have been printed in 'Smooth Stones taken from Ancient Brooks,' by the Rev. C. H. Spurgeon. The complete works of Thomas Brooks, edited with a memoir by the Rev. A. B. Grosart, were printed at Edinburgh in 1866 in six volumes octavo. In his 'Descriptive List' John Brown reserves a select place for Brooks's works, as among the best of the nonconformists' writings. His works abound in classical quotations in Hebrew, Greek, and Latin. It is said there was a printed catalogue of Brooks's library issued for the sale, but no copy of it can be traced.

[Calamy's Nonconformists' Memorial, vol. i., 1802; Reeves's Funeral Sermon for Thomas Brooks, 1680; Descriptive List of Religious Books, by John Brown of Whitburn, 1827; Grosart's Memoir and Notes in Brooks's Collected Works, 1866.] J. H. T.

BROOKSHAW, RICHARD (*fl.* 1804), mezzotint engraver, was for some years chiefly employed at low remuneration in engraving reduced copies from popular prints by MacArdell, Watson, and others; then going to Paris he established himself in the 'Rue de Tournon, vis-à-vis l'Hôtel de Nivernois, chez le Bourrelier,' and in 1773 published a pair of portraits of the dauphin, afterwards Louis XVI, and Marie-Antoinette. These proved so popular that Brookshaw made at least five repetitions of them of different sizes. His talents were highly appreciated in France, and during his residence there he produced some excellent plates, which are now scarce. Whether he returned, at any time, to England is not known, neither is the place or date of his death; the latest record of him are some plates in the 'Pomona Britannica,' published in 1804. His best works published in France were the above-mentioned portraits, and those of the Duke of Orleans, the Countess d'Artois, and the Countess de Provence. Among those engraved in England are 'Christ on the Cross,' after A. van Dyck (1771); 'Thunderstorm at Sea,' after H. Kobell (1770); 'The Jovial Gamesters,' after A. van Ostade; portraits of Miss Greenfield (1767) and Miss Emma Crewe and her sister, after Sir Joshua Reynolds.

[Redgrave's Dict. of Artists, 1878.] L. F.

BROOM, HERBERT (1815-1882), writer on law, born at Kidderminster in 1815, was educated at Trinity College, Cambridge, where he graduated as a wrangler in 1837. He proceeded LL.D. in 1864. He was called to the bar at the Inner Temple in Michaelmas term 1840, and practised on the home circuit. For a considerable period he occupied the post of reader of common law at the Inner Temple. He died at the Priory, Orpington, Kent, on 2 May 1882. He was the author of several works on different branches of law, among which 'Legal Maxims,' first published in 1845, obtained a wide circulation as an established text-book for students. A fifth edition appeared in 1870. Of his other works the principal are: 1. 'Practical Rules for determining Parties to Actions,' 1843. 2. 'Practice of Superior Courts,' 1850. 3. 'Practice of County Courts,' 1852. 4. 'Commentaries on the Common Law,' 1856. 5. 'Constitutional Law viewed in relation to Common Law and exemplified by Cases,' 1st edition 1866; 2nd edition 1885. 6. 'Commentaries on the Laws of England' (with E. Hadley), 1869. 7. 'Philosophy of Law; Notes of Lectures,' 1876-8. He was also the author of two novels, 'The Missing Will,' 1877, and 'The Unjust Steward,' 1879.

[Law Journal, xvii. 260; Solicitors' Journal, xxvi. 453.] T. F. H.

BROOME, WILLIAM (1689–1745), the son of a poor farmer, was born at Haslington in Cheshire, where he was baptised on 3 May 1689. He was educated at Eton, and is said to have been captain of the school for a whole year, vainly waiting for a scholarship to take him to King's College, Cambridge. At last, in 1708, he was admitted a subsizar of St. John's College, being sent by the kindness of friends. At college he obtained a small exhibition. Among his Cambridge contemporaries he associated with Cornelius Ford and with the Hon. Charles Cornwallis, both of them valuable friends whom he retained through life. The former has related that Broome was very shy and clumsy as an undergraduate, but that he versified so readily that he became known in college as 'the Poet.' At the age of twenty-three Broome appeared before the world as a writer. He contributed some very poor verses, modelled on Pope's pieces, to 'Lintot's Miscellany' in 1712, and in the same year was published the prose translation of the 'Iliad' by Ozell, Oldisworth, and Broome. It was as an excellent Greek scholar, as a translator of Homer, and as a great admirer of Pope, that he was introduced to the latter in 1714, at the house of Sir John Cotton, at Madingley, near Cambridge. Pope at once perceived that Broome was a man calculated to be of service to him in his Homeric undertaking, and on returning to London he began that correspondence with him which lasted without intermission for fourteen years, and with intervals for more than twenty. Broome would be entirely forgotten were it not for his connection with Pope's 'Homer.' The first labour which Pope set him was to read and condense the notes of Eustathius, an archbishop of Thessalonica, who had annotated Homer in the eleventh century. The crabbed Greek of this commentator baffled Pope, who was far inferior to Broome as a scholar. In November 1714 Pope set Broome on this work, which proved exceedingly tedious, but was admirably carried out by him. There had been no terms agreed upon for these notes, and when Pope approached the subject of payment, Broome, who was pleased to put the poet under an obligation, refused to be paid. He was, in fact, well-to-do, having had the excellent living of Sturston in Suffolk given to him by his friend Cornwallis. He married Mrs. Elizabeth Clarke, a wealthy widow, on 22 July 1726, and for the rest of his life he enjoyed something like opulence. He had now become acquainted with Elijah Fenton, a man somewhat older than himself, of similar tastes and perhaps equal talents, infatuated like himself with admiration for Pope. According to one story, Broome and Fenton had been encouraged by the success of Pope's 'Iliad' to begin a verse-translation of the 'Odyssey;' but it seems more probable that the latter scheme was started by Pope. At all events, there is no doubt that in 1722 Pope proposed to the two friends to join him in this work as journeymen labourers. The history of this famous co-operation, the close of which was marked by Broome's poetical epistle to Pope appended in 1726 to the final note in the 'Odyssey,' is to be found at length in the correspondence of Pope. Broome was embittered by the scandalous reports which were published on the subject, and was easily persuaded that the 570*l.* which he had himself received for his share of the work was an insufficient sum.

In the meantime Broome had been active as a writer. In 1723 he published a 'Coronation Sermon,' and a prologue to Fenton's tragedy of 'Mariamne,' and in 1726 he collected his 'Poems on Several Occasions' (March 1727), a second edition of which appeared in 1739. For the copyright of this volume Lintot was persuaded by Pope to give Broome 35*l.* Broome was unfortunate in his children. His eldest daughter, Anne (*b.* 1 Oct. 1718), died in October 1723, and he dedicated to her memory the ode entitled 'Melancholy,' certain lines of which seem to have been noticed by Gray. His other daughter died at the age of two years in March 1725. Broome was left childless and in deep dejection, but on 16 March 1726 he was cheered by the birth of a son, Charles John, who survived him.

In 1728 Broome's anger against Pope became so much embittered that he almost ceased to write to him. He ceased at the same time to make any effort in literature, for, as he said in 1735, when he again made advances to Pope, 'you were my poetical sun, and since your influence has been intercepted by the interposition of some dark body, I have never thought the soil worth cultivating, but resigned it up to sterility.' To this he was doubtless further impelled by the death of his most intimate literary friends, Fenton in 1730 and Ford in 1731, both of whom had been his frequent guests in the remote parsonage of Sturston. In April 1728 he had been made LL.D., on occasion of the king's visit to Cambridge, and in September of the same year he was presented to the living of Pulham in Norfolk, which he held with Sturston. He afterwards received from his loyal patron, now become the first earl Cornwallis, two Suffolk livings, the rectory of

Oakley Magna and the vicarage of Eye, whereupon he resigned Sturston and Pulham. He was also chaplain to Lord Cornwallis, who attempted, but without success, to obtain him promotion in the church.

Pope had been annoyed by popular exaggeration of the part Broome had enjoyed in the preparation of the 'Odyssey.' Henley had given expression to this scandal in a stinging couplet:

Pope came off clean with Homer; but they say
Broome went before, and kindly swept the way.

Pope thought that Broome should have positively denied this vague indictment of Pope s originality, and when he was silent he revenged himself meanly by a line in the 'Dunciad:'

Hibernian politics, O Swift, thy doom,
And Pope's, translating four whole years with Broome.

After several editions of the 'Dunciad' had appeared, Broome, in September 1735, broke his long silence by writing an obsequious letter to Pope, not mentioning the impertinent line, but intended to suggest that bygones should be bygones. Pope altered the line to

thy fate,
And Pope's, ten years to comment and translate.

Pope, however, found Broome exacting and tiresome, and allowed the correspondence to lapse once more. Broome only appeared in public on one more occasion, with an 'Assize Sermon' in 1737. In his later years he amused himself by translating Anacreon for the 'Gentleman's Magazine.' He died at Bath on 16 Nov. 1745, and was buried in the abbey church. He was exactly a year younger than Pope, and he outlived him about the same length of time. His only son, Charles John Broome, died at Cambridge, as an undergraduate, in December 1747, and, in accordance with the poet's will, his property reverted to Lord Cornwallis.

Broome was a smooth versifier, without a spark of originality. His style was founded upon Pope's so closely that some of what he thought were his original pieces are mere centos of Pope. He was therefore able, like Fenton, but even to a greater extent, to reproduce the style of Pope with marvellous exactitude in translating the 'Odyssey.' Of that work the eighth, eleventh, twelfth, sixteenth, eighteenth, and twenty-third books, as well as all the notes, are Broome's. His early rudeness of manner gave way to a style of almost obsequious suavity, and his letters, though ingenious and graceful, do not give an impression of sincerity. Of his own poems not one has remained in the memory of the most industrious reader, and he owes the survival of his name entirely to his collaboration with Pope.

[Dr. Johnson wrote a memoir of Broome in his Lives of the Poets. A short life was published by T. W. Barlow. In Elwin and Courthope's Pope's Correspondence will be found a minute account of Broome's relations with the poet, and the text of the letters which passed between them.] E. G.

BROOMFIELD, MATTHEW (*fl.* 1550), was a Welsh poet. His poems are preserved in manuscript in the collections of the Cymmrodorion Society and of the Welsh School, both in the British Museum.

[Tanner's Bibl. Brit.; Williams's Dictionary of Eminent Welshmen; Dept. of MSS., British Museum.] A. M.

BROTHERS, RICHARD (1757–1824), enthusiast, was born on 25 Dec. 1757 at Placentia, Newfoundland. His father was a gunner. He had several brothers and a sister still living in Newfoundland in 1826. At the time of his public appearance he had, according to his own statement, no relatives in England. He came to England when young, and was partly educated at Woolwich. At the age of fourteen he entered the royal navy as midshipman on board the Ocean; as master's mate he served under Admiral Keppel in the engagement off Ushant. Next year he was transferred to the Union, and in 1781 to the St. Albans, a 64-gun ship, despatched in June 1781 to the West Indies, where he was in the engagement between Admiral Rodney and Comte de Grasse. He became lieutenant with seniority of 3 Jan. 1783, and was discharged to half-pay (54*l.* a year) from the St. Albans on 28 July 1783 at Portsmouth. After leaving the service he visited France, Spain, and Italy. On 6 June 1786 he married, at Wrenbury, near Nantwich, Elizabeth Hassall. He soon ceased to live with her. The story current among the representatives of his friend Finlayson is that he joined his ship on his way from church after the ceremony, and, returning a few years later, found his faithless wife already the mother of children. In September 1787 Brothers came to London. Here he lived very quietly on a vegetarian diet, and worshipped at Long Acre chapel or at a baptist chapel in the Adelphi. He continued to draw his half-pay till 1789. An objection to the oath required as a qualification for receiving pay led him to address, on 9 Sept. 1790, a letter to Philip Stephens (afterwards Sir P. Stephens) of the admiralty, which appeared at the time in the 'Public Advertiser.' Brothers

argued so forcibly against the word 'voluntarily' occurring in a compulsory oath, that Pitt had it removed from the form. But the entire exemption from the oath, sought by Brothers, was not granted. In January 1791 he lived in the open country for eight days. On Thursday, 25 Aug. 1791, his landlady, Mrs. S. Green of Dartmouth Street, Westminster, came before the governors of the poor for the parishes of St. Margaret and St. John the Evangelist, and said her lodger would not take the oath and draw his pay, and hence owed her about 33*l*. Brothers was examined before the board on 1 Sept., and stated that two years before he had resigned his majesty's service on the ground that a military life is totally repugnant to christianity. He was taken into the workhouse, and an arrangement made by which, without his making oath, his pay was received by the governors as his agents. The idea that he was charged with a commission from the Almighty grew upon him. About the end of February 1792 he left the house and took a lodging in Soho. On 12 May 1792 he wrote to the king, the ministry, and the speaker, saying that God commanded him to go to the House of Commons on the 17th and inform the members that the time was come for the fulfilment of Dan. vii. He followed this up in July by letters to the king, queen, and ministry, containing prophecies with some hits and some misses; his best guesses at this time being his predictions of the violent deaths of the king of Sweden and Louis XVI. He got into fresh difficulties through not drawing his pay. He was eight days in a sponging-house, and eight weeks in Newgate, from failure to meet his note of hand for 70*l*. to his Soho landlady. At length he signed a power of attorney for his pay, striking out the words 'our sovereign lord' the king, as blasphemous. Getting free at the latter end of November 1792, he made up his mind to resist his call. He tells how he started at eight o'clock from Hyde Park Corner, carrying a rod cut from a wild-rose bush by divine command some months before, and meaning to walk to Bristol, 'and from thence leave England for ever; with a firm resolution also never to have anything to do with prophesying.' He walked some sixteen miles on the Bristol Road, and then flung away his rod, wishing never to behold it again. When he had got about ten miles further, he felt himself suddenly turned round and bidden to return and wait the Almighty's time. On his way back he was forcibly led to the rejected rod, 'and made take it up.' In 1793 he described himself as 'nephew of the Almighty,' a relationship which seems obscure; but Halhed subsequently explained it as meaning a descent from one of the brethren or sisters of our Lord. Towards the end of 1794 he began to print his interpretations of prophecy, his first production being 'A Revealed Knowledge of the Prophecies and Times,' in two successive books. His mind was exercised upon the problem of the fate of the Jews of the dispersion, whom he believed to be largely hidden among the various nations of Europe. Brothers believed himself to be a descendant of David; on 19 Nov. 1795 he was to be 'revealed' as prince of the Hebrews and ruler of the world; in 1798 the rebuilding of Jerusalem was to begin. On Wednesday, 4 March 1795, Brothers was arrested at 57 Paddington Street, by two king's messengers, with a warrant, dated 2 March, from the Duke of Portland, for treasonable practices. He was examined next day before the privy council. He testifies to the courtesy of his examiners, but bitterly complains that after three weeks' confinement he was 'surreptitiously condemned' on 27 March, without hearing evidence in his favour, as a criminal lunatic. Gillray brought out a remarkable caricature on the very day of his examination (5 March), identifying Brothers with the whig party; and another on 4 June, not so well known. The press teemed with the 'testimonies' of disciples. In the House of Commons Nathaniel Brassey Halhed, M.P. for Lymington, an oriental traveller and scholar, moved on Tuesday, 31 March, that Brothers' 'Revealed Knowledge' be laid before the house. Brothers had claimed that immediately on his being 'revealed in London to the Hebrews as their prince,' King George must deliver up his crown to him. No one seconded the motion. Halhed, on Tuesday, 21 April, moved that a copy of the warrant for apprehending Brothers be laid before the house. This likewise was not seconded; but on 4 May Brothers was removed from confinement as a criminal lunatic, and placed, by order from Lord-chancellor Loughborough, in a private asylum under Dr. Simmons at Fisher House, Islington. Here he employed himself in writing prophetic pamphlets. Among his disciples, Brothers set most store by the testimonies of John Wright and William Bryan, a Bristol druggist, at one time a quaker; but he had gained over Halhed (whom he offered to make 'governor of India or president of the board of controul') as early as the beginning of January 1795. William Sharp, the engraver, was so fully persuaded of the claims of Brothers that in 1795 he engraved two plates of his portrait; each plate bears an inscription: 'Fully believing

this to be the Man whom God has appointed, I engrave his likeness. William Sharp.' Sharp came afterwards to discredit Bryan as a deceiver, and eventually attached himself to Joanna Southcott. The flush of admiring pamphlets naturally ceased when 1795 came to an end. Even Halhed seems to have deserted his protégé. But Brothers continued to write at intervals. Apart from his leading craze there is not much interest in his writings. It may be noted as an odd coincidence that he follows Servetus in applying to himself Dan. xii. 1. His doctrine of the inner light is essentially that of the early quakers. In the spring of 1797 Frances Cott, daughter of an Essex clergyman, was placed in the Islington asylum. She was not there long, but long enough for poor Brothers to fall in love with her. A fortnight after her removal it was revealed to him that this young lady was his destined queen. Unfortunately, within a year she married some one else. Brothers owed his release from the asylum to the persistent exertions of the most faithful of all his disciples, John Finlayson [q. v.], who at Brothers's suggestion spelled his name Finleyson, a Scotch writer, originally of Cupar-Fife, and afterwards of Edinburgh. In the summer of 1797 the report of Brothers's grievances acted on him as a divine summons to give up what he calls 'an extensive and lucrative practice of the law at one of the bars of the Scotch courts.' Early in the following year he repaired to London. Here he contrived to enter into 'a secret correspondence' with Brothers, whose writings in confinement he saw through the press; and when Hanchett, a draughtsman, declined to prepare Brothers's plans for the New Jerusalem, Finlayson, 'though totally unacquainted with the art,' executed the work, and got the plans engraved 'at an expense of upwards of 1,200*l.*' When Pitt died (23 Jan. 1806) Finlayson thought the moment opportune for the release of Brothers. He besieged the authorities, and waiting upon Grenville, the new prime minister, he got the warrant for high treason withdrawn. A petition for his liberation, backed by seven affidavits of his sanity, was heard before Lord-chancellor Erskine on 14 April 1806. Erskine ordered his immediate release, but would not supersede the verdict of lunacy, begging Finlayson, 'as his countryman,' not to press him on that point, as there were 'still some scruples in a high quarter' (the king). As Brothers, with the verdict unremoved, could not draw his half-pay, Erskine promised him (so Finlayson says) 300*l.* a year for life from the government. But, owing to the change of administration early in the following year, Brothers got no part of this allowance, though his pay was applied to his wife's maintenance 'on the express and written grounds that government provided for him.' Brothers lived for some time in the house of a well-to-do friend, one Busby, and from 1815 Finlayson took him into his own family. In his later years Brothers occupied himself with astronomical dreams. Bartholomew Prescot, a Liverpool star-gazer, who had published in 1803 'A Defence of the Divine System of the World,' on geocentric principles, entered into a correspondence with Brothers in 1806, and was received into favour. Prescot published the 'Inverted Scheme of Copernicus, book i.,' 1822, and followed it up by the 'System of the Universe,' 1823. When this latter reached Brothers's hands in June 1823, the Almighty told him it 'would not do.' On Sunday, 25 Jan. 1824, Finlayson read to Brothers from the Sunday paper a favourable review of Prescot's work. Brothers bade Finlayson write against Prescot, and described himself as 'seized with the cholera morbus and hectic fever.' That night, about ten o'clock, he died in Finlayson's house, Upper Baker Street, Marylebone. One who saw him 'a few days before his death' describes him as 'very pale, very thin—a mere skeleton, very weak, could hardly walk,' and adds that he 'died of a consumption.' He was interred at St. John's Wood, in a grave at the opposite side of the cemetery to that of Joanna Southcott. He died intestate, leaving a widow and married daughter. Administration was granted to his widow in February 1824; but Finlayson, by a chancery order, prevented her from getting the property (450*l.*, in 3 per cent. Consols). After his death Finlayson pestered the government with a claim for Brothers's maintenance, which (with interest and law expenses) amounted to 5,710*l.*, was subsequently run up by Finlayson to 20,000*l.*, and is now estimated by his descendants at 80,000*l.* On 4 March 1830 Finlayson got 270*l.*, the unappropriated balance of Brothers's pay. The believers in Brothers are not yet extinct, and those who adopt the Anglo-Israel theory regard him as the earliest writer on their side. Besides the prints of Gillray and Sharp, there is a caricature of Brothers, bearing no resemblance to him, by Thomas Landseer, dated 1 Jan. 1831, in 'Ten Etchings illustrative of the Devil's Walk,' 1831, fol. Also a fair likeness by Cruikshank, accompanied by a clever description, in Bowman Tiller's 'Frank Heartwell' (see GEORGE CRUIKSHANK'S *Omnibus*, ed. by Laman Blanchard, 1842, 8vo, plate 6, and pp. 144–7).

Brothers printed: 1. 'Letter to Philip Stephens, Esq.' (see above; reprinted separately, with the answer and other matter, 1795, 8vo, and in Halhed's 'Calculation of the Millennium'). 2. 'A Revealed Knowledge of the Prophecies and Times. Book the First. Wrote under the direction of the Lord God, and published by His sacred command . . .,' 1794, 8vo. 3. Ditto Book the Second, containing 'the sudden and perpetual Fall of the Turkish, German, and Russian Empires,' &c., 1794, 8vo (to these two books Brothers and his disciples constantly refer as 'God's two witnesses;' two editions of each were published in 1794; they were reprinted at the end of February 1795, with additions; also Dublin, 1795; and a French translation, 'Prophéties de Jacques (*sic*) Brothers, ou la Connaissance Révélée,' &c., Paris, An IV. [1796], 8vo, two parts). 4. 'Letter to Halhed' (dated 28 Jan. 1795, and prefixed to Halhed's 'Testimony,' 1795, 8vo). 5. 'Wrote in Confinement. An Exposition of the Trinity. With a farther elucidation of the twelfth chapter of Daniel: one Letter to the King; and two to Mr. Pitt,' &c., 1795, 8vo (a second edition, with supplement, was published on 18 April 1796, 8vo). 6. 'Notes on the Etymology of a few Antique Words,' 1796, 8vo. 7. 'A Letter to Miss Cott, the recorded daughter of King David. . . . With an Address to the Members of his Britannic Majesty's Council, and through them to all Governments and People on Earth,' 1798, 8vo (two editions, same year). 8. 'A Description of the New Jerusalem, with the Garden of Eden in the centre . . . .' 1801, 8vo (2nd edition, 1802, 8vo). 9. 'A Letter to Samuel Foart Simmons, M.D.,' 4to (dated 28 Jan. 1802). 10. 'A Letter to His Majesty, and one to Her Majesty,' and other pieces, 1802, 8vo (all in verse except one). 11. 'Wisdom and Duty, written in support of all Governments,' 1805, 8vo (written on 1 Jan. 1801). 12. 'A Letter to the Subscribers for engraving the Plans of Jerusalem,' &c., 1805, 8vo. 13. 'The Ruins of Balbec and Palmyra, from the plates of Robert Wood, Esq., &c., proved to be the palaces of Solomon,' 1815, 8vo. 14. 'A correct Account of the Invasion and Conquest of this Island by the Saxons, &c., necessary to be known by the English nation, the descendants of the greater part of the Ten Tribes,' &c., 1822, 8vo. 15. (posthumous) 'The New Covenant between God and his People,' &c., 1830, large 4to (coloured prints; edited by Finlayson).

Besides anonymous testimonies, tracts were written in favour of Brothers by William Bryan, G. Coggan, J. Crease, Sarah Flaxmer, Mrs. S. Green, N. B. Halhed, H. F. Offley, W. Sales, H. Spencer, T. Taylor, C. F. Treibner, G. Turner, W. Wetherell, and J. Wright. Bryan's 'Testimony of the Spirit' contains a narrative of Brothers's life, and of his journey to Avignon in 1788. A catchpenny imitation of the genuine testimonies is 'Additional Testimony, &c., by —— Earl of ——.'

On the other side appeared, besides anonymous pamphlets, tracts by 'George Home, D.D.,' probably a pseudonym, W. Huntingdon, D. Levi, and 'M. Gomez Pereira,' probably a pseudonym. Nearly all the publications on both sides appeared in 1795. For Finlayson's publications see FINLAYSON, JOHN.

[Riebau's manuscript memoir of Brothers, 1795 (in possession of Rev. W. Begley; Riebau was Brothers's publisher); Moser's Anecdotes of R. Brothers in 1791–2, 1795; Gillray's Caricatures; Halhed's Speeches; Brothers's Revealed Knowledge and Exposition; Finlayson's Last Trumpet; Monthly Review, 1795; most of the tracts described above, in a private collection; Biog. Hodson Rugg, M.D. (Finlayson's son-in-law); respecting Brothers's marriage, parish register, Wrenbury, per Rev. T. W. Norwood; tombstone at St. John's Wood.]

A. G.

BROTHERTON, EDWARD (1814–1866), Swedenborgian, was born at Manchester in 1814, and in early life was engaged in the silk trade, but, foreseeing that the commercial treaty with France was likely to bring to an end the prosperity of his business, he retired with a competence. After a year of continental travel he devoted himself to the work of popular education. The letters of 'E. B.' in the Manchester newspapers excited great attention, and led to the formation of the Education Aid Society, which gave aid to all parents too poor to pay for the education of their children. The experiment upon the voluntary system tended to prove the necessity of compulsion. This demonstration, which Mr. H. A. Bruce, afterwards Lord Aberdare, called the thunderclap from Manchester, paved the way for the Education Act of 1870. Brotherton's zeal in the cause was unbounded; he had patience, a winning grace

of manner, and a candour only too rare in controversy. In the course of his visitations among the poor he caught a fever, of which he died, after a few days' illness, at Cornbrook, Manchester, 23 March 1866, and was buried at the Wesleyan cemetery, Cheetham Hill. There is a portrait of him in the Manchester town hall. Besides many contributions to periodicals he wrote: 1. 'Mormonism; its Rise and Progress, and the Prophet Joseph Smith,' Manchester, 1846. Brotherton had taken part in 1840 in exposing a Mormon elder, James Malone, who claimed to possess the miraculous 'gift of tongues.' 2. 'Spiritualism, Swedenborg, and the New Church,' London, 1860. This pamphlet has reference to the claims of the Rev. Thomas Lake Harris to a seership similar to that of Swedenborg—claims which were vehemently denied by many members of the 'New Church signified by the New Jerusalem in the Revelation,' as the Swedenborgian congregations are officially styled. Brotherton prints a letter from Dr. J. J. Garth Wilkinson as to identity of the phenomena of respiration in Swedenborg and Harris. From this tract it will be seen that Brotherton was a disciple of Swedenborg, with a tendency to belief in spiritualistic phenomena. 3. 'The Present State of Popular Education in Manchester and Salford, the substance of seven letters reprinted from the "Manchester Guardian," by E. B.,' Manchester, 1864. He was the editor and chief writer of the first volume of a monthly periodical, 'The Dawn' (Manchester, 1861–2). He wrote frequently as 'Libra' and as 'Pilgrim' in Swedenborgian periodicals. His chief contributions were the 'Outlines of my Mental History,' which appeared in the 'Intellectual Repository' for 1849.

W. E. A. A.

BROTHERTON, JOSEPH (1783–1857), parliamentary reformer, was born 22 May 1783 at Whittington, Chesterfield. His father, John Brotherton, who had been a schoolmaster and an exciseman, moved to Manchester in 1789, and soon afterwards set up a cotton mill. About 1802 Joseph became his father's partner, and in 1819 retired from business with a competency. In 1805 he joined the Bible Christian church, and in 1806 married his cousin, Martha Harvey. As Bible Christians they were vegetarians and total abstainers. Mrs. Brotherton published anonymously 'Vegetable Cookery' in numbers, first collected into book form in 1821. About 1818 Brotherton became pastor of his church. He was a vigorous local politician, and subscribed to the sufferers at the Peterloo massacre. He became member for Salford on the passing of the Reform Bill, and was re-elected till his death, his expenses being paid by his constituents. He continued to act as pastor during the parliamentary recesses. He was a free-trader and reformer. His good temper secured him general respect; and he was chairman of the private bills committee. He became famous for the persistence with which he moved the adjournment of the house at midnight. In February 1842, in answer to an attack by Mr. W. B. Ferrand, who had spoken of his 'enormous fortune' amassed by the factory system, he replied that his 'riches consisted not so much in the largeness of his means as in the fewness of his wants,' a phrase inscribed (with verbal alteration) upon his statue in the Peel Park, Salford. He wrote the essays on abstinence from intoxicating liquors and animal food which appeared in 'Letters on Religious Subjects,' printed at Salford about 1819, and immediately reprinted at Philadelphia. The first of these is regarded, in its separate form, as the earliest tract in advocacy of teetotalism. He died suddenly in an omnibus on 7 Jan. 1857. A public subscription was applied to form a fund for purchasing books for local institutions, the monument in the Salford cemetery, and a statue by Matthew Noble in Peel Park. Brotherton had helped to found the library attached to the Peel Park Museum. A portrait by Westcott is in the Peel Park Museum; one by W. Bradley in the Salford town hall; and a third is in the Manchester town hall. His widow died 25 Jan. 1861, aged 79.

Metcalfe (Philadelphia, 1866); Prince's Poetical Works (1880), ii. 363; Bamford's Homely Rhymes, 1864, p. 126; Law Times, 13 June 1871; Edwards's Free Libraries; information from Miss Helen Brotherton.]

W. E. A. A.

BROTHERTON, THOMAS OF, EARL OF NORFOLK and MARSHAL OF ENGLAND (1300–1338). [See THOMAS.]

BROTHERTON, SIR THOMAS WILLIAM (1785–1868), general, entered the 2nd or Coldstream guards as ensign in 1800, was promoted lieutenant and captain in 1801, and transferred to the 3rd or Scots fusilier guards in 1803. With the guards he served under Abercromby in Egypt in 1801, and in Hanover under Lord Cathcart in 1805. On 4 June 1807 he exchanged into the 14th light

dragoons. With it he served almost continuously in the Peninsula from 1808 to 1814. He was in Sir John Moore's retreat to Corunna; he was present at Talavera, at the actions on the Coa, at Busaco, Fuentes d'Onor, Salamanca, where he was wounded, Vittoria, the Pyrenees, the Nivelle, and the Nive, where he was severely wounded and taken prisoner. Wellington speaks of Brotherton's employment in the Estrella (*Despatches*, iv. 614), of his valuable reports (v. 79), his conduct at the Coa (v. 293), and the duke managed his exchange after the battle of the Nive (vii. 237). He was made major by brevet on Wellington's special recommendation on 28 Nov. 1811, promoted major in his regiment 26 May 1812, lieutenant-colonel by brevet and C.B. in 1814. In 1817 he became lieutenant-colonel of the 16th lancers, and held his command for fourteen years; in 1830 he was made aide-de-camp to the king and colonel, in 1841 major-general, in 1844 inspector-general of cavalry, in 1849 colonel of the 15th hussars, in 1851 lieutenant-general, and in 1855 K.C.B. In 1859 he became colonel of the 1st dragoon guards, in 1860 a general, and in 1861 G.C.B. In 1865, at the age of eighty, he was married to his second wife, the daughter of the Rev. Walter Hare, and died on 20 Jan. 1868, at the age of eighty-three, at his son's house near Esher.

[Royal Military Calendar; Wellington Despatches; Gent. Mag. March 1868.] H. M. S.

BROUGH, ROBERT BARNABAS (1828–1860), writer, was born in London 10 April 1828. He was educated at a private school at Newport, Monmouthshire, in which town his father commenced business as a brewer and failed, it is said, through political causes. Brough began active life in Manchester as a clerk. He was fond of art, drew pretty well, and is said to have practised as a portrait-painter. Subsequently he removed to Liverpool, where, while still under age, he started a weekly satirical journal entitled 'The Liverpool Lion.' A burlesque on the subject of the 'Tempest,' written in conjunction with William Brough [q. v.], who had joined him in Liverpool, and entitled 'The Enchanted Isle,' produced at the Amphitheatre in that city, was the first dramatic essay of the brothers. It was seen and approved by Benjamin Webster, who, on 20 Nov. 1848, transferred it to the Adelphi. This led to the establishment of the brothers Brough in London, where they became constant and well-known contributors to the press. Before leaving Liverpool they had married sisters. Elizabeth Romer, the wife of Robert Brough, was at one time a member of the Haymarket company. Alone or in conjunction with his brother, Robert wrote a series of burlesques, which were played at the Adelphi, Lyceum, Olympic, and other theatres, together with some adaptations from the French. His labours in other branches of literature were incessant. In the first volume of the 'Welcome Guest,' which he edited, appeared his novel 'Miss Brown,' and many short stories, poems, and essays. 'Marston Lynch,' reprinted 1860, with a memoir by Mr. G. A. Sala, saw the light in the 'Train,' 1856–7, to which also he contributed translations of the poems of Victor Hugo. He wrote in such comic papers as the 'Man in the Moon' and 'Diogenes,' was for a short time editor of the 'Atlas,' and was the Brussels correspondent of the 'Sunday Times.' His republished works are: 'Cracker Bon-Bons for Christmas Parties,' 1851, 'Life of Sir John Falstaff,' with illustrations by George Cruikshank, 1858, 'Shadow and Substance,' 1859, 'Songs of the Governing Classes,' 1859, 'Miss Brown,' 1860, 'Marston Lynch, his Life and Times,' 1860, 'Ulf the Minstrel,' 1860, 'Which is Which?' (a romance), 1860. He also translated 'La Famille Alain' of Alphonse Karr. His best known burlesques written in conjunction with his brother are: 'Camaralzaman and Badoura,' 'The Sphinx,' and 'Ivanhoe,' and of those he wrote alone 'Medea,' to which the performance of Robson gave much celebrity, 'Masaniello,' and 'The Siege of Troy.' He died at Manchester in the house of his brother-in-law, Mr. William Chilton, 26 June 1860, on his way to North Wales, whither he had been ordered for his health. He left a widow and three children, two of whom are living and are known on the stage. Three of his brothers, William Brough [q.v.], John Cargill Brough, a writer, and Mr. Lionel Brough, the comedian, are well known. Brough's verses are of their epoch. They have neatness of execution and happiness of fancy, but are without the kind of finish sought in modern days. His burlesques were among the best of a not very important class, and his essays are bright and humorous. The 'Songs of the Governing Classes' consist of satirical poems written from a radical point of view. Some of his works are rare and are priced very high in booksellers' catalogues. In the world of journalism Brough was popular, and references to him are abundant in Mr. Yates's 'Recollections and Experiences' and in 'Reminiscences of an old Bohemian.' A benefit performance for his widow and children was given in July 1860 by five companies for which he had written

burlesques. His health was bad, and his early death had long been anticipated.

[Memoir by G. A. Sala in the Welcome Guest, ii. 11, 348–50; Era Almanack; The Train; works mentioned; private information.] J. K.

BROUGH, WILLIAM (*d.* 1671), dean of Gloucester, was educated at Christ's College, Cambridge, where he proceeded B.D. 1627, and D.D. 5 Feb. 1635–6. He was presented to the rectory of St. Michael, Cornhill, about 1630, was an ardent supporter of Laud and his Arminian views, was made chaplain to the king, and was installed canon of Windsor, 1 Feb. 1638–9. At the beginning of the civil wars he was removed from his benefice by the parliamentary commission, 'was also plundered, and his wife and children turned out of doors' (WALKER). His wife is said to have died of grief soon afterwards, and Brough joined the king at Oxford. On 16 Aug. 1643 he was nominated dean of Gloucester, but was not installed till 20 Nov. 1644. He returned to Oxford in 1645, and on 26 Aug. of that year was created D.D. by the king's order. Little is heard of him from this date till the Restoration. He then was reappointed to the deanery, and died 5 July 1671. He was buried in St. George's Chapel, Windsor. He was the author of 'The Holy Feasts and Fasts of the Church, with Meditations and Prayers proper for Sacraments and other occasions leading to Christian life and death,' London 1657; and of 'Sacred Principles, Services, and Soliloquies; or a Manual of Devotion,' 1659, 1671.

[Wood's Fasti (Bliss), ii. 85; Walker's Sufferings, ii. 33; Le Neve's Fasti, i. 444, iii. 401.] S. L.

BROUGH, WILLIAM (1826–1870), writer, elder brother of Robert Barnabas Brough [q. v.], was born in London on 28 April 1826. He was educated at Newport, Monmouthshire, and apprenticed to a printer at Brecon. To the 'Liverpool Lion,' the venture of his brother Robert, whom he joined in Liverpool, William Brough contributed his first literary effort, a series of papers called 'Hints upon Heraldry.' He married Miss Ann Romer, known as a singer, who died a year after her marriage, leaving him one child. He subsequently remarried, and died on 13 March 1870, leaving a widow and six children. Like his brother, whose reputation has overshadowed his own, Brough wrote in many periodical publications. His dramatic works, chiefly burlesques, were seen at many of the London theatres. He also wrote the first of the quasi-dramatic entertainments given by Mr. and Mrs. German Reed.

[Era Almanack; private information.] J. K.

BROUGHAM, HENRY (1665–1698), divine, was one of the twelve children of Henry Brougham of Scales Hall, Cumberland, sheriff for the county in the 6th of William III, by his marriage with 'fair Miss Slee, daughter of Mr. Slee of Carlisle, a jovial gentleman,' who was a merchant in that city. In Midsummer term, 1681, when sixteen years old, Henry Brougham 'became a poor serving-child of Queen's College,' Oxford. He proceeded B.A. in 1685, M.A. in 1689, being afterwards tabarder and fellow. On 29 Sept. 1691 he was collated, and on 30 Sept. was installed prebend of Asgarby in the church of Lincoln. He was, with William Offley, domestic chaplain to Thomas Barlow, the bishop. On Barlow's death in the same year he bequeathed his Greek, Latin, and English Bibles, and his own original manuscripts, to Brougham and Offley. A condition of the gift was that Brougham and Offley were not to make public any of his writings after his decease; and in 1692, on Sir Peter Pett publishing what he called the bishop's 'Genuine Remains,' the two legatees 'delay'd no time' in issuing a vindication, calling Sir Peter Pett and the vicar of Buckden (where the bishop had died) 'confederate pedlars.' The title of this vindication of their master was 'Reflections to (*sic*) a late Book entituled The Genuine Remains of Dr. Tho. Barlow, late Bishop of Lincoln, Falsely pretended to be published from his lordship's Original Papers.' It was written by Henry Brougham, and was published in 1694, with a list of Socinian writers (Latin), declared to be the bishop's real list, annexed.

From 1693 to 1695 Brougham acted as proproctor for the university; and on 29 March 1698, aged 33, he died at Oxford, and was buried in Queen's College chapel.

[Wood's Athenæ Oxon. (Bliss), iv. 341, 539, 540; Hutchinson's Cumberland, i. 300–2; Nicolson and Burn's Cumberland and Westmoreland, i. 395–6; Cat. Grad. Oxon, p. 89; Reflections, &c. pp. 7, 10; Offley's Epistle Dedicatory to same, not paged; Le Neve's Fasti (Hardy), ii. 103.] J. H.

BROUGHAM, HENRY PETER, BARON BROUGHAM AND VAUX (1778–1868), lord chancellor, eldest son of Henry Brougham and Eleanor, daughter of Mrs. Syme, widow of James Syme, a minister of Alloa, and sister of Dr. W. Robertson, the historian, was born in a house at the corner of the West Bow and the Cowgate, Edinburgh,

on 19 Sept. 1778. Although in after life he claimed to be descended from the De Burghams, the ancient lords of Brougham Castle, and from the barons of Vaulx, his pedigree cannot be traced with certainty beyond Henry Brougham described in 1665 as of Scales Hall, Cumberland, gentleman, whose eldest son John in 1726 purchased a portion of the manor of Brougham, Westmoreland. This estate descended to the purchaser's great-nephew Henry, the father of the chancellor (Nicholson and Burn, *History of Cumberland and Westmorland*, i. 395; Lord Campbell, *Lives of the Chancellors*, viii. 214–18). When barely seven years old Brougham was sent to the high school at Edinburgh; he rose to the head of the school and left in August 1791. The next year he spent with his parents under the care of a tutor at Brougham Hall, and in October 1792 entered the university of Edinburgh. He delighted in the study of mathematics and physics, and at the age of eighteen sent a paper to the Royal Society on 'Experiments and Observations on . . . Light,' which was read and printed in the society's 'Transactions.' This was followed by another on the same subject, and in 1798 by one on 'Porisms' (*Philosophical Transactions*, lxxxvi. 227; lxxxvii. 352; lxxxviii. 378). He also distinguished himself in the debating societies of the university. After finishing the four years' course of humanity and philosophy in 1795, he began to read law. As a student he often indulged in riotous sports, and took part in twisting off knockers as eagerly as in philosophical discussions (*Lord Brougham's Life and Times*, i. 87). He spent his vacations in making walking tours, and in September 1799 visited Denmark, Sweden, and Norway (*ib.* 547). Having passed advocate on 1 June 1800, he went the southern circuit, and for the sake of practice acted as counsel for the poor prisoners. During the circuit he behaved in a boisterous and eccentric fashion, and unmercifully tormented old Lord Eskgrove, the judge of assize. He disliked the profession of law. With an extraordinarily wide range of knowledge, with an excellent memory, a ready wit, and unbounded self-confidence, he aimed at outshining others in everything. In 1802 he joined the small company engaged in setting on foot the 'Edinburgh Review.' He had already attained a high place in the literary society of Edinburgh, and it was expected he would shortly 'push his way into public life' (Cockburn, *Life of Jeffrey*, i. 138). The first number of the 'Review' was published the following October, and Brougham contributed three of its twenty-nine articles. In 1803 he brought out his 'Colonial Policy of European Nations,' a work which did not meet with any great success. On 14 Oct. of that year he was admitted a member of Lincoln's Inn, though he continued to reside in Edinburgh for about two years longer. He took a warm interest in the movement for the abolition of slavery, and in 1804 went to Holland to gain information on the subject, extending his tour to Italy and other parts of the continent. In this year too he organised a volunteer corps at Edinburgh, but the government slighted its offer of service, and the corps was dissolved. His early articles in the 'Review' were generally scientific; he now wrote much on political and economical subjects with the avowed intention of adopting a political career (*Memoirs of F. Horner*, i. 274, 279).

In 1805 Brougham settled in London. There he read English law and supported himself mainly by writing for the 'Edinburgh Review.' His versatility and his power of despatch were extraordinary. He never considered any subject out of his line. In the first twenty numbers of the 'Review' he had as many as eighty articles. Eager to write everything himself, he was so jealous of new contributors that the editor, Jeffrey, took care not to let him know of any addition to the staff (Napier, *Correspondence*, 3). His reviews were slashing, but his work was often superficial and his criticisms were sometimes scandalously unjust. His contemptuous notice of the experiments by which Dr. Young arrived at the theory of undulation is a famous instance of his unfairness (*Edin. Rev.* ii. 450, 457, ix. 97; Dr. Young, *Works*, i. 195–215; Peacock, *Life of Dr. Young*, 174; Campbell, *Life*, viii. 247). Brougham was soon introduced to Lord Holland, and became a frequent visitor at Holland House. The service he was able to render the whigs with his pen, his witty conversation, and his agreeable manners secured him a good position in society. In 1806 he was appointed secretary to Lords Rosslyn and St. Vincent on their mission to the court of Lisbon, and although on his return at the end of the year he found himself considerably out of pocket, his able conduct in Portugal increased his reputation. He was further brought into notice by his sympathy with the anti-slavery agitation, which secured him the good opinion of Wilberforce and the party he led. When in March 1807 the Grenville ministry was forced to resign, the whig press was in Brougham's hands, and in the course of ten days, with some slight help from Lord Holland and one or two others, he produced 'a

prodigious number' of articles, pamphlets, and handbills, appealing chiefly to the dissenters to uphold the whigs in the impending election (Lord Holland, *Memoirs of the Whig Party*, ii. 229). On the defeat of the whigs Brougham turned to legal study and became the pupil of Mr. (afterwards chief justice) Tindal. In July 1808 he applied for a special call to the bar to enable him to go the ensuing circuit, and the benchers were willing to grant his petition. In order, however, to avenge their party, the attorney-general and solicitor-general came down and procured its rejection. On the following 22 Nov. he was called in the ordinary course and joined the northern circuit. Although his study of civil law in Scotland had to some extent 'legalised his mind,' he was not and never became master of the subtleties of English law, and he had little success in the courts until he had made his mark in politics (Campbell, *Life*, 233, 254). His first triumph as a barrister was political rather than legal. As counsel for the Liverpool merchants who petitioned against the orders in council he was heard before both houses of parliament on many successive days, and though the petition was dismissed his powers as an advocate were universally acknowledged, and the case may be said to have made his fortune.

Through the influence of Lord Holland, the Duke of Bedford offered Brougham a seat for Camelford, and he was returned to parliament on 5 Feb. 1810. His first speech, delivered on 5 March, in support of the vote of censure on the Earl of Chatham, was not a success, though he was not dissatisfied with it (*Parl. Debates*, 16, 7**; *Life and Times*, i. 500; Campbell, *Life*, 262). During the course of the session he spoke repeatedly, almost usurping Ponsonby's place as leader of the opposition in the commons; nor was he thought to be taking too much upon himself when only four months after he entered the house he moved an address to the crown on the subject of slavery (*Quarterly Review*, cxxvi. 42). His reputation as an advocate was increased by his triumphant defence of J. and J. L. Hunt on 22 Jan. 1811. The defendants were indicted for libel for publishing an article in the 'Examiner' on military flogging, and the case was especially suited to Brougham's peculiar power (*Speeches*, i. 15). Three weeks later he failed to procure the acquittal of the proprietor of a country newspaper who was indicted on a similar charge at Lincoln, and on 8 Dec. 1812 unsuccessfully defended the Hunts when indicted for a libel on the prince regent. These and other like cases in which Brougham was retained for the defence were of great public importance, and his success was declared 'more rapid than that of any barrister since Erskine' (*Memoirs of F. Horner*, ii. 123). Following the line he had already adopted as an advocate, Brougham on 3 March 1812 moved for a select committee with reference to the orders in council, and carried on his attack with such vigour that on 16 June Castlereagh announced that the orders would at once be withdrawn. This victory gained him immense popularity, especially with the commercial interest, which had suffered severely from the orders (Bentham, *Works*, x. 471). In the arrangements made by Lords Grey and Grenville in view of their possible return to office he was to have been president of the board of trade. As Camelford had passed into other hands, he was, at the dissolution on 29 Sept., forced to seek for a seat elsewhere, and the good service he had done to commerce led to an invitation to stand for Liverpool. He was, however, forced to retire from the poll on 16 Oct., and, after making an unsuccessful effort to secure a seat for the Inverkeithing burghs, found himself shut out from the house. He was very sore at this exclusion, he declared that he 'was thrown overboard to lighten the ship,' and he wrote bitterly of Lady Holland (*Life and Times*, ii. 92, 101). It would of course have been easy enough for the whigs to find him a seat, and his exclusion was caused partly by jealousy and partly by distrust. This distrust was not without foundation, for his letters to Lord Grey at this period show want of ballast and political insight. At last Lord Darlington offered him a seat for Winchelsea, and he returned to the house on 21 July 1815. Although not acknowledged as the leader he soon became the most prominent member of the opposition in the commons. He attacked the Holy Alliance; in March 1816 he succeeded in defeating Vansittart's income-tax bill; and on 9 April, in moving for a committee, made a powerful speech on the character and causes of the agricultural distress—one cause of the distress, he declared, was that the area of cultivation had been extended unduly. In a speech on the depression in trade delivered on 23 March 1817 he severely blamed the foreign policy of the ministry, and pointed out the evils of restriction and prohibition. He made another attack on the ministry on 11 June in the form of a motion for an address to the prince regent on the state of the nation, which was defeated by only thirty-seven votes, a defeat which was reckoned a triumph (*Life and*

Times, ii. 312). He constantly advocated retrenchment and a sound commercial policy, and he vigorously opposed the repressive measures known as the Six Acts. At the same time he looked on the radicals with dislike, and in a letter to Lord Grey of 1 Nov. 1819 urged that the whigs should declare their separation from them (*Life and Times*, ii. 351). He did good service both in drawing attention to the importance of popular education and in devising means for its attainment. Having obtained the reappointment of the education committee in 1818, he instituted an inquiry into charity abuses, which he extended to the universities and to Eton and Winchester. Some scandalous revelations were made, and the governing bodies bitterly resented the inquisition. In 1819 Brougham was kept from the house for some weeks by a dangerous illness. On his return on 23 June Peel made an attack on the conduct of the committee, which he met with a full defence (*Speeches*, iii. 180). In June 1820 he brought in two bills providing for the compulsory building, the government, and the maintenance of parochial schools. His proposals were disliked by the dissenters and fell through. After the death of his father in 1810, Brougham when not in London made his home at Brougham Hall. In 1821 he married Mary Anne, daughter of Thomas Eden, and widow of John Spalding. By her he had two daughters; the elder died in infancy, the younger in 1839.

From 1811 and perhaps from an earlier date Brougham was constantly consulted by the Princess of Wales. His statement that he was also the constant adviser of the Princess Charlotte is certainly exaggerated (*Life and Times*, ii. 145). He seems, however, to have given her some prudent advice in 1813 (*ib.* 174), and to have been consulted by her, through Lady Charlotte Lindsay, respecting her marriage in 1814. When the princess escaped from Warwick House to her mother's residence in Connaught Place on the evening of 11 July, the Princess of Wales sent for Brougham, who helped to persuade her to return (*Autobiography of Miss Knight*, i. 307, 309). The dramatic story he tells of his leading the young princess to a window and showing her the crowds gathering for a Westminster election (*Edin. Rev.* April 1838, lvii. 34; *Life and Times*, ii. 230) has been denied and ridiculed by another Edinburgh reviewer, on the ground that 'on the day in question there was neither a Westminster election nor nomination' (*Edin. Rev.* April 1869, cxxix. 583). The story may or may not be true, but that on that day Sir Francis Burdett nominated Lord Cochrane as member for Westminster before 'a very numerous meeting in Palace Yard' is beyond question (*Times*, 12 July 1814), and the circumstances of Cochrane's candidature are sufficient to account for the popular excitement to which Brougham refers.

He strongly advised the Princess of Wales not to go abroad. In July 1819 he proposed acting on her behalf, though in this case without authority from her, that she should reside permanently abroad, should consent to a separation, and not use her husband's title on condition that her allowance (35,000*l.*), then dependent on the king's life, should be secured to her (Yonge, *Life of Lord Liverpool*, ii. 16). When the princess became queen, she appointed Brougham her attorney-general, and he was accordingly called within the bar on 22 April 1820. A few days before he received a proposal from Lord Liverpool offering the queen 50,000*l.* a year on the same conditions that Brougham had named the year before. This proposal he did not make known to the queen, who was then at Geneva. On 4 June he and Lord Hutchinson, who acted for the king, met her at St. Omer, being sent to propose terms of separation and to warn her against coming to England. It was then too late, and the queen crossed to Dover the next day. Even when at St. Omer, Brougham forbore to inform her of the proposal made by the minister the preceding April, nor did Lord Liverpool become aware that his proposal had been withheld from her until 10 June (*ib.* 53–62). Had Brougham delivered the message with which he was entrusted, the whole scandal of the queen's trial would probably have been avoided. In that case, however, he would have lost the opportunity of playing the most conspicuous part in a famous scene. He never gave any satisfactory explanation of his conduct. Brougham was called before the lords in the matter of the bill of degradation and divorce on 21 Aug. when he exposed the untrustworthiness of Majocchi, the principal witness for the crown. His speech for the defence took up 3 and 4 Oct.; the peroration, so he told Macaulay, he had written over seven times. The result of the trial brought him an extraordinary amount of popularity, and the 'Brougham's Head' became a common tavern sign. On 3 and 4 July 1821 he unsuccessfully argued the queen's right to coronation before the privy council, and tried in vain to prevent her from attempting to force her way into the abbey. He attended her funeral in August. The next month he obtained the conviction of one Blacow, a clergyman,

for libelling her, and in January 1822 delivered his speech on the Durham clergy, the finest specimen of his powers of sarcasm and invective, in defence of a printer accused of libelling them in some reflections on their conduct on the queen's death. Brougham had now lost his official rank, and owing to the king's personal spite against him he was debarred from receiving a patent of precedence. This persecution did him no harm, for in one year he made 7,000*l.* in a stuff gown.

When in 1822 the death of Lord Londonderry made it seem possible that the whigs might come into office, Lord Grey proposed that, should the administration be changed, Brougham should be 'really and effectively if not nominally' leader of the house and a member of the government (*Life and Times*, ii. 453). This and other negotiations were brought to an end when the king accepted Canning as foreign secretary. With Canning Brougham was far more at one as regards foreign affairs than he had been with Castlereagh. Nevertheless, on 23 April 1823 he made a violent attack upon him for refusing to press the catholic claims. Canning declared he spoke falsely, and a motion was made that both the disputants should be committed to the custody of the serjeant-at-arms. The dispute, however, was at last composed (*Parl. Deb.* new series, viii. 1089–1102). On 3 Feb. 1824 Brougham made a remarkable speech urging the government to resist the dictation of the Holy Alliance in Europe, dwelling on the iniquity of the French invasion of Spain and the tyranny of the Austrians in Italy. This speech, which excelled all his former political efforts in bitterness of sarcasm and severity of attack, was received with immense applause (*ib.* x. 53–70; Stapleton's *Life of Canning*, i. 296). On the news of the condemnation and death of the missionary Smith, he proposed a vote of censure on the government of Demerara, and his speech of 10 June forms an epoch in the history of the abolition of slavery (*Speeches*, ii. 42–128). In the course of this session he was violently assaulted in the lobby of the house by a lunatic named Gourley. Having been elected lord rector of Glasgow University in 1825, Brougham on his way thither visited Edinburgh on 5 April. A banquet was given in his honour, at which he made several violent and extravagant speeches (*Speeches . . . on 5 April* 1825; Napier, *Correspondence*, 42). When in 1827 Canning succeeded Lord Liverpool, Brougham, feeling himself generally in accord with the new minister's principles, left the opposition benches and on 1 May took his place on the ministerial side of the house. He brought over with him a body of moderate whigs, who thus for a time separated themselves from Grey. Canning had no wish to be overridden, and offered Brougham the post of lord chief baron, which would have removed him from the house. Brougham, however, objected to being 'shelved,' and refused the offer. He now at last obtained a patent of precedence, and on going circuit was greeted with much rejoicing by his brother barristers, among whom he was popular. His reappearance in 'silk' brought him a large number of cases. This influx, however, did not last long. He was 'deficient in nisi prius tact,' was apt to treat juries with impatience, and seemed to think more of displaying his own powers than of getting verdicts for his clients. During the short time that he continued at the bar his practice declined (Campbell; *Law Magazine*, new series, l. 177).

As early as 8 May 1816 Brougham first attempted an improvement in the law; in bringing forward a bill for securing the liberty of the press, he proposed an amendment of the law of libel. On 7 Feb. 1828 he brought forward a great scheme of law reform. In a speech of six hours' length he dealt exhaustively with the anomalies and defects in the law of real property and in proceedings at common law. His extraordinary effort bore ample fruit, for it caused a vast improvement in our system of common law procedure, and overthrew the cumbrous and antiquated machinery of fines and recoveries. The accession of the Duke of Wellington to office in the January of this year sent Brougham back to the opposition; for while, in common with his party, he cordially upheld the duke and Peel in carrying the Catholic Emancipation Bill of 1829, he was not prepared to accord them his general support. Brougham in 1830 vacated his seat for Winchelsea, the borough of the earl of Darlington (created Marquis of Cleveland in 1827), and accepted the offer of the Duke of Devonshire to represent Knaresborough in succession to Tierney. At the same time he by no means relished sitting for a close constituency: it consorted ill with his desire to be known as a popular politician, and it kept him back from taking part in the movement for parliamentary reform. While sitting for Winchelsea, he had made unsuccessful attempts in 1818, 1820, and 1826 to gain a seat for Westmoreland. Now, however, a speech he made on 13 July, on bringing forward a motion against slavery, gained him an invitation to stand for Yorkshire. He was triumphantly elected, and in the parliament of 1830 took his seat

for the county instead of for Knaresborough, where he was also returned. In the course of the election he pledged himself to reform (*Quarterly Review*, April 1831, xlv. 281). He prepared a scheme of reform which gave the franchise to all householders, leaseholders, and copyholders, and took one member from each of the rotten boroughs (Roebuck, *Whig Ministry of* 1830, i. 420), and on 16 Nov. gave notice that he would lay it before the house. On that day Lord Grey received the king's command to form a ministry. The whig leaders would have been glad to leave Brougham out of the cabinet. On the 17th he was invited to become attorney-general. He indignantly declined, and the next night announced, with an implied threat, his intention of proceeding with his motion. This made him to some extent master of the situation. He wished for the rolls, for he did not want to leave the commons. The king, however, would not hear of this, for he knew that Brougham's presence would render Lord Althorp's leadership impotent (Croker, ii. 80). He was therefore offered the chancellorship. He received the great seal on 22 Nov., was elevated to the peerage with the title of Baron Brougham and Vaux on 23rd, and on 25th was sworn as chancellor.

He worked with extraordinary energy in his new office. He had often, and especially in 1825, reproached Lord Eldon for the delays in his court, and he was determined to bring in a wholly new system. At the rising of the court for the long vacation he was able to announce that he had not left a single appeal unheard. While he did much, and certainly far more than any other chancellor had done, to expedite proceedings in chancery, he gave some offence by boasting publicly and repeatedly of achievements that he had not performed, and that were indeed beyond mortal power. Moreover, both now and at other times, he was singularly negligent of professional courtesy (Campbell). Pursuing the work of law reform, he was the means of effecting considerable improvements in the court of chancery, the abolition of the court of delegates, the substitution for it of the judicial committee of the privy council, and the institution of the central criminal court. The foundation of these two courts alone would entitle him to be remembered as a great legal reformer. He brought in a bankruptcy bill, which eventually became the basis of a statute; and though his Local Courts Bill of 1830 fell through, it prepared the way for the present system of county courts. Since 1820 the subject of education had occupied much of his attention. In conjunction with Dr. Birkbeck, he helped to set on foot various mechanics' institutes. In 1825 he published his 'Observations on the Education of the People,' which before the end of the year reached its twentieth edition. In this pamphlet (*Speeches*, iii. 103) he proposed a plan for the publication of cheap and useful works, which he carried out by the formation of the Society for the Diffusion of Useful Knowledge. The first committee of this society was formed in April 1825. After some delays it recommenced its work November 1826, and published its introductory volume, written by Brougham, in March 1827 (*Edin. Rev.* June 1827, xlvi. 225). The 'Observations' also contain a reference to the need of scientific education for the upper classes (151). Brougham sought to supply this need by the foundation of the London University, a work which he brought to a successful conclusion in 1828. He took the leading part in the debates on education in 1833, and on 14 March announced that he saw reason for abandoning the plan of a compulsory rate he had hitherto advocated. On 23 March 1835 he moved that parliament should vote grants for education, and that a board of commissioners should be appointed to control the application of the money granted, and on 1 Dec. 1837 brought forward two bills further developing the system of national education. In April 1831 the defeat of the ministry necessitated a dissolution, and political circumstances made it equally necessary that the dissolution should be immediate, and that the prorogation should be pronounced by the king in person. The extraordinary account that Brougham has given through Roebuck (*Hist. of the Whig Ministry*, ii. 148–52) of his saving the country by taking on himself to order the attendance of the troops and the like, and of his almost compelling the king to go down to the house, and the whole story of what passed in the interview he and Grey had with the king on 22 April, are apocryphal. In the exciting scene in the House of Lords which followed the announcement of the king's arrival, the chancellor's self-importance caused him to lose his head (*Grey Correspondence*, i. 234–6; *Greville Memoirs*, 1st ser. ii. 135–7). On 7 Oct. Brougham made a speech on the second reading of the Reform Bill that has been held to be his masterpiece: it is full of sarcasm on the tory lords. As in most of his great speeches, the peroration is studied and unnatural. Brougham ended with a prayer; he fell on his knees, and remained kneeling. He had kept up his energy with draughts of mulled port, and his friends, who thought that he was unable to rise, picked him up and set him on the woolsack (*Speeches*, iii. 559; Campbell, *Life*, 398). In the crisis

which followed the victory of the opposition on 17 May 1832, Brougham represents himself as playing the most important part. This is by no means borne out by other evidence. Lord Grey was not a man to allow the chancellor to take his place, and William IV certainly never forgot what was due to him as his first minister (Roebuck, *History*, ii. 331; *Life and Times*, iii. 192-201, with which compare *Grey Correspondence*, i. 422-44; *Edin. Rev.* cxxv. 546).

In June 1834 Lord Grey retired from office. His retirement is said by Brougham to have been caused by the indiscretion of Littleton, the Irish secretary. It was at least as much Brougham's own work. Without Grey's knowledge he persuaded Lord Wellesley, the lord-lieutenant of Ireland, to withdraw from his recommendation that certain clauses of the Coercion Bill should be retained. This underhand proceeding led to complications both with O'Connell and between the whig leaders in the two houses. Brougham had not the honesty to acknowledge what he had done when he might have cleared Littleton from O'Connell's charges, and he has disguised the truth in his autobiography. Grey felt he had been ill used. Brougham knew that he wished to resign office, and seems to have schemed to separate him from his followers, in order that he himself and the party generally might retain office—for himself he probably hoped for the treasury, after Grey had gone out (*Letter of Henry, Earl Grey*, July 1871, *Edin. Rev.* cxxxiv. 291-302; *Parl. Deb.* xxiv. 1019, 1308, xxv. 119; *Lord Hamerton* (*Littleton*), *Memoir of* 1834, p. 85, and passim). Brougham continued chancellor when Lord Melbourne took office. Up to this time his popularity and his success were unabated. It was during his chancellorship that he used to drive about in a little carriage specially built for him by Robinson, the coachmaker, which excited much wonder by its unusual shape, 'an old little sort of garden chair,' Moore the poet called it (*Diary*, vi. 196); it was the ancestor of all broughams. For years the 'Times' had flattered him outrageously, and he was accused of using the 'Edinburgh Review' as a means of puffing himself and his projects (Napier, 110. The extraordinary tyranny Brougham exercised over the management of the 'Edinburgh Review' is constantly illustrated by incidental passages in the correspondence of Macvey Napier, the editor; it was grievously, though for the most part vainly, complained of, and was bitterly resented by Macaulay). Now, however, the 'Times' changed its tone, and attacked him. In August he made a tour in Scotland. He displeased the king by taking the great seal across the border, and made matters worse by indulging in extravagances that excited the disgust of all sensible persons (*Greville Memoirs*, 1st ser. iii. 133; Campbell). The ministers were dismissed on 11 Nov. That evening Melbourne, under a promise of secrecy, told Brougham the result of his interview with the king. Brougham at once sent the news to the 'Times,' and his brief communication, ending with the words, 'The queen has done it all,' appeared in the issue of the next morning. The king declared that he had been 'insulted and betrayed' (Torrens, *Memoirs of Melbourne*, ii. 43, 44). Although Brougham knew that Scarlett was to succeed Lyndhurst as chief baron of the exchequer, he offered to take the judgeship without any pay beyond his ex-chancellor's pension. This offer brought him into contempt, and he retreated to the continent (*ib.* 51; *Greville Memoirs*, 1st ser. iii. 157, 158). He visited Cannes, then a mere village, and on 3 Jan. 1835 bought land there to build a house (H. Retournay).

Although Melbourne returned to office in April 1835, he, and indeed the proposed ministers generally, were determined not to have Brougham among them again after the follies of which he had been guilty, and in order to conciliate him the great seal was put in commission. He gave the government an independent support, and was especially useful in enabling them to carry the Municipal Reform Bill. His activity in parliament was extraordinary. In the course of this session he delivered 221 speeches that are reported in 'Hansard' (*Parl. Deb.* xxx. Index quoted by Campbell). The appointment of Pepys (Lord Cottenham) as chancellor early in 1836 wounded him deeply. He considered, probably not without reason, that Melbourne had deceived him (Torrens, ii. 174; Napier, 251, 316). His health was shaken by his vexation, and he spent a year in retirement at Brougham Hall. During the early years of Queen Victoria's reign, Brougham, though sitting on the ministerial side of the house, often opposed the government. Adopting a radical tone, he stigmatised his former colleagues as courtiers, and on 11 Dec. 1837, when criticising the allowance to the Duchess of Kent, engaged in a sharp altercation with Melbourne (*Greville Memoirs*, 2nd ser. i. 33). During the next year he did much literary work, editing the four volumes of his 'Speeches' and writing books, reviews, and other articles. At the same time he continued to make his presence felt in parliament. On 20 Feb., in a speech of great eloquence, he moved resolutions recommending the immediate abolition of slavery. Of his work during

this session Macaulay, an old enemy of his, wrote: 'A mere tongue, without a party and without a character, in an unfriendly audience and with an unfriendly press, never did half as much before (NAPIER, 270). In the debate of 21 May 1839 on the bedchamber question he made a violent attack on the whigs and spoke somewhat disrespectfully of the queen as 'an inexperienced person.' After the re-establishment of the Melbourne ministry he virtually led the opposition in the lords, and on 6 Aug. succeeded in carrying five resolutions censuring the government policy in Ireland. On 21 Oct., while he was at Brougham Hall, it was reported and generally believed in London that he had met his death by a carriage accident. All the newspapers of the 22nd except the 'Times' contained obituary notices of his career, one or two of them of an uncomplimentary character. It soon became known that the report was false, and Brougham was accused, not without reason, of having set it abroad himself. It was true that he and two friends were thrown from a carriage on the 19th, but none of the three was injured (CAMPBELL, 505–11; NAPIER, 312, 313). The loss of his only surviving daughter on 30 Nov. of this year caused him deep grief. He named the house he built for himself at Cannes the Château Eleanor Louise, in memory of her. From 1840 onwards he spent some months in each year at Cannes. His habit was to go to Brougham Hall as soon as parliament was prorogued, and at the approach of winter to visit Paris, where he took the opportunity of attending the meetings of the Institute—he had been elected an associate by the Academy of Moral and Political Science in 1833—and thence to proceed to Cannes, where he stayed until the next session recalled him to London.

Although on the defeat of Melbourne's ministry Brougham changed his seat to the opposition side of the house, he nevertheless gave Peel's government considerable support, and when the Ashburton treaty, concerning the Maine boundary, was attacked by his former colleagues, he brought forward a motion on 7 April 1843 expressing approval of it and thanking Lord Ashburton for his services. He was in favour of free trade, though at the same time he disliked the Anti-Corn-law League, for he looked with suspicion on all movements outside parliament. Although he tried to avert the disruption of the Scotch kirk, he has been accused of, in the end, sacrificing the cause to the interests of the tory government by yielding to Lord Aberdeen (COCKBURN, *Journal*, ii. 44). In this year a member of the family of Bird, the former owners of Brougham Hall, set up a claim to the estate. The case, which was one of trespass, was heard at Appleby assizes on 11 Sept., and the verdict ousted Bird's claim. Brougham was never happier than when acting as judge; he sat constantly in the supreme court of appeal, and in the judicial committee of the privy council, the court he had himself founded, and over which he desired to hold permanent sway. In the hope of acquiring the judicial headship of this court he constantly, and especially in the spring of 1844, endeavoured to obtain the appointment of a vice-president, who should be a judge (*Greville Memoirs*, 2nd ser. ii. 225). He continued to press the subject of law reform as president of the Law Amendment Association and director of its organ, the 'Law Review,' as well as in parliament. On 19 May 1845 he made a long speech on this subject, rehearsing, as his custom was, all he had effected during the seventeen years that had passed since his motion of 1828, urging the establishment of 'courts of conciliation,' a scheme he had propounded in his bill of 1830, and of other local courts, and recommending that additional facilities should be provided for the sale and transfer of land by the use of a formula of conveyance and by a system of registration; and as regards criminal law, that more frequent commissions of oyer and terminer should be held. He ended by laying nine bills on the table (*Parl. Deb.* 3rd ser. lxxx. 493–516). Old as he now was, and notwithstanding the position he had achieved and the good work he had done, his constant thirst for admiration led him 'to desire to flourish away among silly and dissolute people of fashion.' Ever anxious to impress others with a sense of his superior ability, 'he had no idea how to converse or live at ease' (*Greville Memoirs*, 2nd ser. ii. 235). When the French provisional government of 1848 summoned the National Assembly, Brougham was seized with a desire to be returned as a deputy, and applied to the minister of justice for a certificate of naturalisation. After some difficulty he was made to understand that if he became a French citizen he would lose his English citizenship, and with it his rank, offices, and emoluments, and he accordingly withdrew his request. On 11 April, while this matter was still pending, he made a long speech in the house on foreign affairs, attacking Charles Albert, the king of Sardinia, for having promised to help the Milanese, and the pope for his concessions to the liberals, and severely blaming the conduct of the French provisional government. He found, however, that his extraordinary proposal had not escaped notice, and Lord Lansdowne

answered him with a sarcastic remark (*Parl. Deb.* xcviii. 138). On the accession of the whigs to office under Lord John Russell, Brougham remained on the opposition side of the house, and in the session of 1849 strenuously opposed the repeal of the navigation acts. On 20 July he again reviewed the state of affairs on the continent, and, no longer moved with the sentiments he had expressed in 1824, blamed the government for sympathising with Victor Emmanuel, spoke strongly against the revolutionary party in Italy, defended the action of the French, and complained of prejudice against Austria and of unfair dealings with the King of Sardinia (*Parl. Deb.* cvii. 616).

Although Brougham gradually withdrew from politics, he continued active in the cause of law reform, urging his schemes in parliament, in the 'Law Review,' and through the Law Amendment Society. He took a large share in hearing appeals, and Lord-chancellor Truro left the administration of the appellate jurisdiction of the lords in his hands. This caused considerable dissatisfaction, and on 5 Aug. 1850 Brougham complained of the comments of the 'Daily News' as a breach of privilege and a libel on himself. The experiment of reinforcing the law lords by creating a peer for life brought him in haste from Cannes in 1856, and he greatly contributed to the defeat of Lord Wensleydale's claim. He took the opportunity of moving for returns to state his opinion on the movement for further parliamentary reform on 3 Aug. 1857. In 1850 he again turned to scientific studies. He read a paper on experiments in light before the French Institute, and in later years contributed various other papers on kindred subjects (*Comptes Rendus*, Nos. 30, 34, 36, 44, 46). He was also constantly busy writing, arranging, and editing literary work of various kinds. The wide and indefinite area which the Social Science Association proposed to occupy greatly pleased him. The committee held their first formal meeting at his house in Grafton Street on 29 July 1857; he was chosen president for the year, and on 12 Oct. delivered the inaugural address at the first congress at Birmingham. For some years the meetings of the association were held to be events of no small importance, and the prominent part Brougham took in the proceedings brought him great fame. He was again chosen president in 1860, and held the office during the five succeeding years. He was entertained at a public banquet at Edinburgh in October 1859, and two days afterwards was elected chancellor of the university. He delivered his installation address on 18 May 1860. In that year he received a second patent of peerage with remainder to his younger brother William and his heirs male, an honour conferred on him in recognition of his eminent services in the cause of education and in the suppression of slavery. Lady Brougham died at Brighton on 12 Jan. 1865. Brougham attended the meeting of the Social Science Association held at Manchester in 1866. The next year his mental powers, which had been gradually failing, gave way altogether. He died quietly at his château at Cannes on 7 May 1868. He was an honorary D.C.L. of Oxford, and a fellow of the Royal Society. In spite of a gaunt ungainly figure and an ungraceful habit of action he was a remarkably successful speaker. His memory was excellent, and his self-possession not easily disturbed. His words came readily, he had great powers of sarcasm, and an unfailing store of humour. Eloquent, however, as many of his speeches are, his perorations often bear the marks of over-careful preparation. Although his health was never strong, his power of application was extraordinary, and even when he appeared to be utterly worn out he was always able to call up a fresh supply of energy to meet any new demand upon him. His style of writing was slovenly, and, setting aside his speeches, nothing that he wrote can now be read with much pleasure except his private letters and some of his 'Sketches of Statesmen.' His attainments were manifold, and he wrote and spoke as a teacher on almost every subject under the sun. His mind ranged over so wide an area that he never acquired a thorough knowledge of any particular division of learning. It has been said of him that if he had known a little law he would have known a little of everything. Nevertheless he has left his abiding mark in the improvement of our legal system, and his work in the judicial committee of the privy council was of considerable importance both in upholding liberal principles in ecclesiastical matters, and in creating a body of precedents which have served as a kind of foundation of Indian law (*Encyclop. Brit.*, art 'Brougham'). In almost all public questions—his speeches on foreign politics in 1848 and 1849 excepted—he upheld the cause of humanity and freedom; yet he had little moral influence; such weight as he had was simply due to his intellectual powers. Genial in society, with great power of enjoyment, a keen perception of what was ludicrous, and a ready wit, he was at the same time an unamiable man, a bitter enemy, and a jealous colleague. His temper was irritable, he was easily excited, and from whatever cause his excitement arose it led him to speak and act unadvisedly. Brougham was buried in

the cemetery of Cannes. His residence there and the interest he took in the welfare of the place raised it from a mere fishing village to its present position. The inhabitants were not ungrateful. The hundredth anniversary of his birth was kept with many marks of respect, and the foundation of a statue to him was laid on 19 Dec. 1878 (RETOURNAY).

Lord Brougham's brother WILLIAM (born 26 Sept. 1795) succeeded to the title as second baron. He was educated at Jesus College, Cambridge (B.A. 1819), was M.P. for Southwark 1831–5, and a master in chancery 1835–52. He died 3 Jan. 1886, and was succeeded by his eldest son, Henry Charles (*Times*, 5 Jan. 1886).

A bibliographical list, describing 133 of Brougham's literary productions, has been drawn up by Mr. Ralph Thomas, and will be found at the end of the eleventh volume of the second collected edition of his works. Only his larger and more important books will therefore be mentioned here. His critical, historical, and miscellaneous works were published under his own direction in a collected edition, 11 vols. 8vo, 1855–61, a second edition 1872–3. His chief productions, many of which are included in the collected editions, are: 1. 'An Enquiry into the Colonial Policy of European Powers,' 2 vols. 1803. 2. 'Practical Observations on the Education of the People,' edits. 1–20, 1825, at Boston, U.S., 1826, 'Praktische Bemerkungen,' Berlin, 1827. 3. 'A Discourse on Natural Theology,' with an edition of Paley's work, 1835, 1845. 4. 'Select Cases decided by Lord Brougham in the Court of Chancery,' edited by C. P. Cooper, 1835. 5. 'Speeches upon Questions relating to Public Rights,' 4 vols. 1838, 1845, with introductions which, though written in the third person, are really Brougham's own work (COCKBURN, *Diary*, i. 190). 6. 'Historical Sketches of Statesmen . . . in the time of George III,' 1839, second series 1839, third series 1843, in 6 vols. 12mo, 1845, 'Esquisses Historiques . . . traduites . . . par U. Legeay,' Lyon, 1847. 7. 'ΠΕΡΙ ΤΟΥ ΣΤΕΦΑΝΟΥ,' 'Demosthenes upon the Crown, translated,' with notes, 1840, a most unfortunate production, was made the subject of a severe review in the 'Times,' 21 and 28 March, and 3 and 4 April, which was reprinted in a separate form, and on which see 'Gent. Mag.,' March 1841, p. 265. 8. 'Political Philosophy,' and other essays published by the Society for the Diffusion of Useful Knowledge, 2 vols. 1842, 3 vols. no date; to the ill-success of this publication Lord Campbell ascribes the break-up of the society; for a contradiction of this statement see 'Notes and Queries,' 4th series, ix. 489. 9. 'Albert Lunel; or, the Château of Languedoc,' 3 vols. 12mo. 1844, described by Brougham as a philosophical romance, written 'as a kind of monument to her I had lost' (his daughter, who is made the heroine); it was not published, and, after a few copies had been distributed, was suppressed by the author; it is not included in the 'bibliographical list,' but the authorship is now certain (BROUGHAM, *Letters to Forsyth*, 69–71, 73, 80; *Notes and Queries*, 4th series, vii. 277), it was reprinted and published, 3 vols. 8vo, 1872. 10. 'Lives of Men of Letters and Science . . . in the time of George III,' 1845, second series 1846; some of these lives are translated into French. 11. 'History of England and France under the House of Lancaster,' 1852 anon., 1861 with name. 12. 'Contributions to the Edinburgh Review,' 3 vols. 1856, contains merely a selection from Brougham's numerous articles. 13. 'Lord Brougham and Law Reform,' acts and bills introduced by him since 1811, edited by Sir J. E. Eardley Wilmot, 1860; contains forty statutes carried and fifty bills introduced, on which, however, see Campbell's 'Life,' 587. 14. 'Tracts, Mathematical and Physical,' collected edition 1860. 15. 'Life and Times of Henry, Lord Brougham,' written by himself, 3 vols. posthumous, 1871.

[References to special passages in most of the authorities here named are given in the text. Brougham's Life and Times of Henry, Lord Brougham, 3 vols., must be read with caution, and its statements compared with other authorities; it is chiefly valuable for the letters it contains; for notices of some curious misstatements in these volumes, besides those mentioned in the above article, see the Times for 12 Jan. 1871, and Notes and Queries, 4th ser. vii. 277; Brougham's Speeches, 4 vols.; Brougham's Letters to W. Forsyth, privately printed; Lord Campbell's Life of Brougham, in Lives of the Chancellors, viii. 213–596, is to be read with due allowance for its spiteful tone—compare Lord St. Leonards on Some Misrepresentations in Lord Campbell's Lives; F. A. M. Mignet has an able summary of Brougham's Life and Work in his Nouveaux Éloges Historiques, 1877, 165–237; Nicholson and Burn's History of Cumberland and Westmorland, i. 395; Hutchinson's History of Westmorland, i. 301; Memoirs and Correspondence of Francis Horner, ed. Of the many squibs written on Brougham the most famous is T. L. Peacock's description of him in Crotchet Castle, where he figures as 'the learned friend.'] W. H.

BROUGHAM, JOHN (1814–1880), actor and dramatist, was born in Dublin on 9 May 1814, and, after having for some time attended Trinity College, began life as a student of surgery, and for several months walked the Peter Street Hospital; but an uncle from whom he had prospects falling into adversity, he was thrown upon his own resources, and thereupon went to London. A chance encounter with an old acquaintance led to his engagement at the Tottenham Street Theatre (a house long afterwards known as the Prince of Wales's), and there, in July 1830, acting six characters in the old play of 'Tom and Jerry,' he made his first appearance on the public stage. In 1831 he was a member of the company organised by Madame Vestris for the Olympic Theatre. His first play was written at this time, and was a burlesque, prepared for William Evans Burton, who was then acting at the Pavilion Theatre. When Madame Vestris removed from the Olympic to Covent Garden, Brougham followed her thither, and there remained as long as she and Charles Mathews were at the head of the theatre, and it was while there that he wrote 'London Assurance' in conjunction with Dion Boucicault. There has been much discussion about the authorship of this popular piece. Brougham stated in 1868 that he brought an action against Boucicault, whose legal adviser suggested the payment of halt the purchase-money in preference to proceeding with the case. In 1840 he became manager of the Lyceum Theatre, which he conducted during summer seasons, and for which he wrote 'Life in the Clouds,' 'Love's Livery,' 'Enthusiasm,' 'Tom Thumb the Second,' and, in connection with Mark Lemon, 'The Demon Gift.'

Leaving England he arrived in America in October 1842, and opened at the Park Theatre, New York, as O'Callaghan in the farce 'His Last Legs.' A little later he was in the employment of W. E. Burton in New York, and wrote for him 'Bunsby's Wedding,' 'The Confidence Man,' 'Don Cæsar de Bassoon,' 'Vanity Fair,' and other pieces. Still later he managed Niblo's Garden, producing there his fairy tale called 'Home,' and the play of 'Ambrose Germain.' He opened a new theatre in Broadway, near the south-west corner of Broome Street, called Brougham's Lyceum, 15 Oct. 1850, and while there he wrote 'The World's Fair,' 'Faustus,' 'The Spirit of Air,' a dramatisation of 'David Copperfield,' and a new version of 'The Actress of Padua.' The Lyceum was at first a success, but the demolition of the building next to it made it appear to be unsafe, and the business gradually declined, leaving him burdened with debts, all of which, however, he subsequently paid. His next speculation was at the Bowery Theatre, of which he became lessee on 7 July 1856, and produced 'King John' with superb scenery and a fine company, but this not proving to be to the taste of his audiences, he wrote and brought out a series of sensational dramas, among which were 'The Pirates of the Mississippi,' 'Tom and Jerry in America,' and 'The Miller of New Jersey.' In September 1860 he returned to London, where he remained five years. While playing at the Lyceum he adapted from the French, for Charles A. Fechter, 'The Duke's Motto' and 'Bel Demonio,' and wrote for Miss Louisa Herbert dramatic versions of 'Lady Audley's Secret' and 'Only a Clod.' He also wrote the words of three operas, 'Blanche de Nevers,' 'The Demon Lovers,' and 'The Bride of Venice.' His reappearance in America took place on 10 Oct. 1865 at the Winter Garden Theatre, and he never afterwards left America. He opened Brougham's Theatre on 25 Jan. 1869, with a comedy by himself, called 'Better Late than Never,' but this theatre was taken out of his hands by James Fisk, junior, under circumstances which caused much sympathy on his behalf. On 4 April a banquet in his honour was given at the Astor House, and on 18 May he received a farewell benefit. The attempt to establish Brougham's Theatre was his final effort in management. After that time he was connected with various stock companies, but chiefly with Daly's Theatre and with Wallack's. In 1852 he edited a bright comic paper in New York, called 'The Lantern,' and he published two collections of his mis-

cellaneous writings, entitled 'A Basket of Chips' and 'The Bunsby Papers.' On 17 Jan. 1878 he received a testimonial benefit at the Academy of Music, at which the sum of 10,278 dollars was received, and this fund, after the payment of incidental expenses, was settled on him in an annuity. His last work was a drama, entitled 'Home Rule,' and his last appearance on the stage was made as Felix O'Reilly the detective in Boucicault's play of 'Rescued,' at Booth's Theatre, New York, on 25 Oct. 1879. His rank among actors it is difficult to assign. He excelled in humour rather than in pathos or sentiment, and was at his best in the expression of comically eccentric characters. Among the parts that will live in memory as associated with his name are: Stout in 'Money,' Dennis Brulgruddery in 'John Bull,' Sir Lucius O'Trigger, Micawber, Captain Cuttle, Bagstock, O'Grady in 'Arrah-na-Pogue,' Dazzle in 'London Assurance,' and O'Callaghan in 'His Last Legs.' He was the author of over seventy-five dramatic pieces. He died at 60 East Ninth Street, New York, on 7 June 1880, and was buried in Greenwood cemetery on 9 June. He is said to have been the original of Harry Lorrequer in Charles Lever's novel.

He married first, in 1838, Miss Emma Williams, an actress who had played at the St. James's Theatre, London, in 1836, and afterwards at Covent Garden, where she was the original representative of the Empress in 'Love.' In 1845 she left America for England, and remained away for seven years. On her return she appeared at the Broadway Theatre on 16 Feb. 1852, and played a short engagement; again, in 1859, she went to America, being then known as Mrs. Brougham Robertson. She died in New York on 30 June 1865. John Brougham married secondly, in 1844, Annette Hawley, daughter of Captain Nelson, R.N., and widow of Mr. Hodges. She had been on the London stage in 1830, and made her American début at New Orleans as the Fairy Queen in 'Cinderella' in 1833. At one time she had the direction of the Richmond Theatre, which then went by the name of Miss Nelson's Theatre, and she was afterwards at Wallack's National, where she appeared as Telemachus. Her death took place at New York on 3 May 1870, the twenty-sixth anniversary of her wedding-day.

[Life, Stories, and Poems of John Brougham, edited by William Winter, Boston, United States of America (1881), with portrait; Appleton's Annual Cyclopædia, 1880, p. 66; Ireland's Records of the New York Stage (1866–67), ii. 178, 210, 384, 594, 655.] G. C. B.

BROUGHTON, Baron (1786–1869). [See Hobhouse, John Cam.]

BROUGHTON, ARTHUR (*d.* 1796), botanist, youngest son of Thomas Broughton 1704–1774 [q. v.], graduated M.D. at Edinburgh in 1779. He practised medicine at Bristol and was elected physician to the infirmary there, 14 May 1780. He went to Jamaica in Dec. 1783 with leave of absence, but never returned, dying at Kingston 29 May 1796 (*Felix Farley's* Bristol Journal, 30 July 1796). Robert Brown named after him the genus of orchids *Broughtonia*.

The following is a list of his works: 1. 'Diss. Med. de Vermibus Intestinorum,' Edinburgh, 1779, 8vo. 2. 'Enchiridion Botanicum,' London, 1782, 8vo. 3. 'Hortus Eastensis; or a catalogue of Exotic Plants in the garden of Hinton East, Esq., in the mountains of Liguanea, at the time of his decease,' Kingston, 1792, 4to; new edition by J. Wiles, Jamaica, 1806, 4to. 4. 'Catalogue of the more valuable and rare Plants in the public botanic garden in the mountains of Liguanea' (St. Jago de la Vega), 1794, 4to.

[The works cited.] B. D. J.

BROUGHTON, HUGH (1549–1612), divine and rabbinical scholar, was born in 1549 at Owlbury, a mansion in the parish of Bishop's Castle, Shropshire. In the immediate vicinity are two farmlands, called Upper and Lower Broughton. His ancestry was old and of large estate (the family bore owls as their coat of arms); he had a brother a judge. He calls himself a Cambrian, and it is probable that he had a good deal of Welsh blood in his veins. His preparation for the university he got from Bernard Gilpin, at Houghton-le-Spring. Gilpin's biographers say that he picked up Broughton while the lad was making his way on foot to Oxford, trained him, and sent him to Cambridge. They accuse Broughton of base ingratitude in endeavouring, at a subsequent period, to supplant Gilpin in his living. Although this story must be received with caution, the later relations between Broughton and his earliest benefactor were probably somewhat strained. Gilpin's will (he died on 4 March 1584) shows that Broughton had borrowed some of his books, and adds: 'I trust he will withhold none of them.' Broughton was entered at Magdalene College, Cambridge, in 1569. The foundation of his Hebrew learning was laid, in his first year at Cambridge, by his attendance on the lectures of the French scholar, Antoine Rodolphe Chevallier [q. v.], of whom he gives a particular account, without mentioning his name. He graduated B.A. in 1570, and

became fellow of St. John's and afterwards of Christ's. He had no lack of patronage at the university; Sir Walter Mildmay made him an allowance for a private lectureship in Greek, and the Earl of Huntingdon still more liberally supplied him with means for study. He was elected one of the taxers of the university, and obtained a prebend and a readership in divinity at Durham (1578). On the ground of holding a prebend, he was deprived of his fellowship in 1579, but was reinstated in 1581, at the instance of Lord Burghley, the chancellor, who, moved by the representations of the Bishop of Durham (Richard Barnes) and the Earls of Huntingdon and Essex, overcame the opposition of Hatcher, the vice-chancellor, and Hawford, master of Christ's. He resigned the office of taxer, and does not seem to have returned to the university. He came to London, where he spent from twelve to sixteen hours a day in study, and distinguished himself as a preacher of puritan sentiments in theology. He is said to have predicted, in one of his sermons (1588), the scattering of the armada. He found friends among the citizens, especially in the family of the Cottons, with whom he lived, and whom he taught to be enthusiastic Hebrew scholars. In 1588 appeared his first work, 'A Concent of Scripture,' dedicated to the queen. John Speed, the historian, saw the book through the press. In this 'little book of great pains,' as Broughton himself calls it, he attempts to settle the scripture chronology, and to correct profane writers by it. The work is interesting, written in a lively style, full of learning and ingenuity, but removing all difficulties with a quaint oracular dogmatism, which entertains rather than convinces. He holds the absolute incorruptness of the text of both testaments, including the Hebrew points. Indeed, he goes so far in a later work as to maintain, respecting the *k'thibh* and the *q'ri*, that 'both of them are of God, and of equal authority.' The 'Concent' was attacked in their public prelections by John Rainolds at Oxford, and Edward Lively at Cambridge. Broughton appealed to the queen (to whom he presented a special copy of the book on 17 Nov. 1589), to Whitgift, and to Aylmer, bishop of London, asking to have the points in dispute between Rainolds and himself determined by the authority of the archbishops and the two universities. He began weekly lectures in his own defence to an audience of between 80 and 100 scholars, using the 'Concent' as a text-book. The privy council allowed him to deliver his lectures (as Chevallier had done before) at the east end of St. Paul's, until some of the bishops complained of his audiences as 'dangerous conventicles.' He then removed his lecture to a room in Cheapside, and thence to Mark Lane, and elsewhere. It is said that he was in fear of the high commission, and therefore anxious to leave the country. It is probable that he left for Germany at the end of 1589 or beginning of 1590, taking with him a pupil, Alexander Top, a young country gentleman. Broughton on his travels was a valiant disputant against popery (even at the table of his fast friend, the Archbishop of Maintz), and engaged in religious discussion with several Jews. At Frankfort, early in 1590, he disputed in the synagogue with Rabbi Elias. He was at Worms in 1590, and returned next year to England. His letter of 27 March 1590 (probably 1591) to Lord Burghley asks permission to go abroad, with a special view to make use of King Casimir's library. But he remained in London, where he met Rainolds, and agreed with him to refer their differing views about the harmony of scripture chronology to the arbitration of Whitgift and Aylmer. Broughton's letter to these prelates is dated 4 Nov. 1591. Nothing came of the reference, and though Whitgift acknowledged the industry and dexterity which Broughton had displayed in the 'Concent,' the archbishop was his enemy with Elizabeth. In 1592 we find Broughton again in Germany, and, according to Lightfoot, he probably remained abroad till the death of Elizabeth. But Brook prints (from Baker's copy, *Harl. MS.* 7031, p. 94) a letter from Broughton to Lord Burghley, dated 'London, May 16, 1595,' in which he applies for the archbishopric of Tomon (Tuam), 'worth not above 200*l.*,' and asks for a meeting to be arranged between him and Rainolds. On the continent he made the acquaintance of many learned men, including Scaliger, who calls him 'furiosus et maledicus.' It is said that he was tempted with the offer of a cardinal's hat; catholic scholars treated him with more respect than foreign protestants. He wrote against Beza in his fiercest Greek. Puritanical as he was in his theology, he held the episcopal polity to be apostolic. His dispute with Rabbi Elias brought him, in 1596, a letter from Rabbi Abraham Reuben, written at Constantinople. This was addressed to him in London, but in a cursive Hebrew character, which puzzled 'divers scholars,' till Top managed to make out whom it was intended for, and sent it off to Germany. Broughton was sanguine as to the good effects of his discussions with Jews in their mother tongue, and often speaks of his disputations with one Rabbi David Farrar. While at Middleburg

he printed 'An Epistle to the learned Nobilitie of England, touching translating the Bible from the Original,' 1597, 4to. The project of assisting in a better version of the Bible was one which he had long cherished, and he had already addressed the queen on the subject. His plan, as given in a letter dated 21 June 1593 (though addressed to 'Sir William Cecil,' who became Lord Burghley in 1571), was to do the work in conjunction with five other scholars. Only necessary changes were to be made, but the principle of harmonising the scripture was to prevail, and there were to be short notes. Though his scheme was backed up by 'sundry lords, and amongst them some bishops,' his application for the means of carrying it out was unsuccessful. In a letter to Burghley, of 11 June 1597, he blames Whitgift for hindering his proposed new translation. In 1599 he printed his 'Explication' of the article respecting Christ's descent into hell. It was a topic he had touched upon before, maintaining with his usual vigour (against the Augustinian view, espoused by most Anglican divines) that *hades* never meant the place of torment, but the state of departed souls. A philology more ingenious than accurate enabled him to parallel 'hell' with *sheol*, as 'that which haleth all hence.' With this discussion, which he first brought prominently forward among English scholars, his name is chiefly associated at the present day. He returned to England, to the surprise of his friends, at a moment when London was afflicted with the plague, of which he showed no fear. In 1603 he preached before Prince Henry, at Oatlands, on the Lord's Prayer. He soon returned to Middleburg, and became preacher there to the English congregation. Brook prints (here corrected from *Harl. MS.* 787, pp. 94, 96) the following tart petition, addressed, without effect, to James I: 'Most gracious soveraigne, your majesty's most humble subject, Hugh Broughton, having suffered many years danger for publishing of your right and Gods truth, by your unlearned bishops that spent two impressions of libells to disgrace the Scottish mist: which libells now the stacioners deny that ever they sold. He requesteth your majesty's favour for a pension fitt for his age, studye, and trauells past, bearing allwayes a most dutifull heart unto your majesty. From Middleburgh, Aug: 1604. Your majesty's most humble subject, H. Broughton.' This was written in the month following the king's letter (22 July) appointing fifty-four learned men for the revision of the translation of the Bible. Broughton's old adversary, Rainolds, had been more successful than he in pressing upon the authorities the need of a revision, and when the translators were appointed, Broughton, to his intense chagrin, was not included among them. Lightfoot considers his exclusion unjust. Subsequently he criticised the new translation unsparingly, after his manner; his corrections would have carried more weight if they had not been generally accepted as the outpourings of a disappointed man. Of his own versions of the prophets it must be said that, while marked by all his peculiarities, they have a majesty of expression which entitles them to be better known than they are. His bitter pamphlet against Bancroft certainly did not improve his chances of obtaining due recognition of his merits as a scholar. Ben Jonson satirised him in 'Volpone' (1605), and especially in the 'Alchemist' (1610). He continued to write and publish assiduously. His translation of Job (1610) he dedicated to the king. But he now fell into a consumption, and he made his last voyage to England, arriving at Gravesend in November 1611. He told his friends he had come to die, and wished to die in Shropshire, where, it appears, his pupil, now Sir Rowland Cotton, had a seat. His strength, however, was not equal to the journey. He wintered in London, and in the spring removed to Tottenham. Here he lingered till autumn, in the house of Benet, a Cheapside linendraper. His death occurred on 4 Aug. 1612. He was buried in London, at St. Antholin's, on 7 Aug., James Speght preaching his funeral sermon. He had married a niece of his pupil, Alexander Top, named Lingen, a lady of good estate. Broughton's portrait is engraved by Van Hove. He is described as graceful and comely, and of a 'sweet, affable, and loving carriage' among his friends; at table he was bright and genial. His pupils almost adored him. His reputation for arrogance is not undeserved. He was sharp, but not scurrilous; had he stood with a party, his language would have seemed temperate enough according to the fashion of his day, but he always fought for his own hand. Thomas Morton, afterwards bishop of Durham, who was with him in Germany, took him in the right way: 'I pray you, whatsoever dolts and dullards I am to be called, call me so before we begin, that your discourse and mine attention be not interrupted thereby.' Broughton accepted the exhortation with perfect good-humour. He was easily provoked, and lamented on his death-bed his infirmities of temper. Some incidents in his life may give the impression that he was of a grasping nature. He expected his friends to do a great deal for him, and made warm and public acknowledgment of their willing kindness. It must

be remembered that his pursuits and his publications involved considerable outlay. There is no evidence that he enriched himself; in 1590 he 'took a little soil' near Tuam, or somewhere else in Ireland; possibly this was his wife's property. Lightfoot allows that his style is 'curt and something harsh and obscure,' yet maintains that his writings 'do carry in them a kind of holy and happy fascination.'

Lightfoot collected his works under the strange title, 'The Works of the Great Albionean Divine, renowned in many Nations for Rare Skill in Salems and Athens Tongues, and Familiar Acquaintance with all Rabbinical Learning, Mr. Hugh Broughton,' 1662, fol. The volume is arranged in four sections or 'tomes;' prefixed is his life; Speght's funeral sermon is given in the fourth tome; appended is an elegy by W. Primrose, of which the finest passage, descriptive of the many languages known to Broughton, is borrowed (and not improved) from some noble lines in the comedy of 'Lingua,' printed in 1607, and very doubtfully assigned to Anthony Brewer [q. v.]. A few tracts are omitted from the collection. According to Bohn's 'Lowndes,' i. 285, the 'Concent' contains 'specimens, by W. Rogers, of the earliest copperplate-engraving in England.' Broughton's 'Sinai-Sight,' 1592, was wholly 'engraven in brass,' at an expense of about 100 marks. The genealogical tables, prefixed to old bibles, and assigned to Speed, were really (according to Lightfoot) Broughton's work, but 'the bishops would not endure to have Mr. Broughton's name' to them; his owl may, however, be seen upon them. Of Broughton's manuscripts the British Museum possesses a quarto volume (Sloane MS. 3088), containing thirty-five pieces, many referring to the new translation of the Bible; and his 'Harmonie of the Bible,' a chronological work (Harl. MS. 1525). Neither of these volumes is in autograph, with the exception of a small part of the 'Harmonie.' See also the 'Cat. of Lansdowne MSS.,' 1807, pp. 220, 331, 332.

[Life, by Lightfoot, prefixed to Works, 1662 (abridged in Clark's Lives, 1683, p. 1 seq., portrait); Bayle, art. 'Broughton, Hugues;' Gilpin's Life of B. Gilpin, 1751, pp. 251, 271; Biog. Brit. (Bliss), ii. 308 seq.; Hunt's Religious Thought in England, 1870, i. 126 seq.; Notes and Queries, 5th series, iv. 48; Cole's MS. Athenæ Cantab.; Baker MSS. iv. 93, 94.]

A. G.

BROUGHTON, JOHN (1705-1789), pugilist, was born in 1705, but there is no record of his birthplace, although it may be assumed to have been London. As a boy he was apprenticed to a Thames waterman, and, when at work on his own account, he generally plied at Hungerford Stairs.

He is usually considered as the father of British pugilism, combats, previous to his appearance, having been chiefly decided either by backsword or quarterstaff on a raised stage. Accident settled his future career. Having had a difference with a brother waterman, they fought it out; and he showed so much aptitude for the profession which he afterwards adopted, that he gave up his boat and turned public bruiser, for which his height (5 ft. 11 in.) and weight (about 14 stone) peculiarly fitted him.

He attached himself to George Taylor's booth in Tottenham Court Road, and remained there till 1742, patronised by the *élite* of society, and even royalty itself in the person of the Duke of Cumberland, who procured him a place, which he held until his death, among the yeomen of the guard. But the duke ultimately deserted him. Broughton fought Slack on 11 April 1750, and the duke backed his *protége* the champion, it is said, for 10,000*l*. Broughton lost the fight, having been blinded by his adversary, and the duke never forgave him for being the cause of his loss of money. After this battle Broughton's career as a pugilist was ended.

In 1742 he quarrelled with Taylor, and built a theatre for boxing, &c., for himself in Hanway Street, Oxford Street. There he performed until his retirement, when he went to live at Walcot Place, Lambeth. He resided there until his death, on 8 Jan. 1789. He amassed considerable property, some 7,000*l*., and dying intestate, it went to his niece. He was buried on 21 Jan. 1789 in Lambeth Church, his pall-bearers being, by his own request, Humphries, Mendoza, Big Ben, Ward, Ryan, and Johnston, all noted pugilists. His epitaph was as follows:—

Hic jacet
Iohannes Broughton,
Pugil ævi sui præstantissimus.
Obiit
Die Octavo Ianuarii,
Anno Salutis 1789,
Ætatis suæ 85.

[Capt. Godfrey's Treatise upon the Useful Science of Self-Defence, 1747; Pugilistica; Boxiana; Fistiana; Morning Post, January 1789.]

J. A.

BROUGHTON, RICHARD (*d.* 1635), catholic historian, was born at Great Stukeley, Huntingdonshire, towards the close of

Queen Mary's reign. In his preface to the 'Monasticon Britannicum' he claims descent from the ancient family of Broughton of Broughton Towers in Lancashire.

After studying for a time at Oxford, where however he was not entered as a student, Broughton proceeded to the English college at Rheims. Here he devoted himself chiefly to the study of Hebrew and English antiquities, and theology. On 24 Feb. 1592 he was admitted into deacon's orders, and was ordained priest on 4 May 1593, the same year in which the English college quitted Rheims and returned to their old home at Douay after an absence of fifteen years. Soon after this he was sent to England for the purpose of making converts to the Roman catholic church, and of furthering the political schemes of the jesuits. John Pits, a contemporary of his, speaks of him as being 'most diligent in gathering fruit into the granary of Christ,' and the same writer, alluding to his literary acquirements, says that he was 'no less familiar with literature than learned in Greek and Hebrew.' Dodd, writing of him a century later, says 'he was in great esteem among his brethren, an assistant to the archpriest, a canon of the chapter, and vicar-general to Dr. Smith, bishop of Calcedon.' At one time he was secretary to the Duchess of Buckingham, and it is to her and her mother, the Countess of Rutland, that his 'Ecclesiasticall Historie' is dedicated. In 1626 we find him 'sojourner' at Oxford. He died on 18 Jan. 1634–5, and was buried by the side of his father and mother at Great Stukeley, as we learn from his epitaph: 'Quo cum matre, patre sub saxo conditur uno.'

As a writer he was dull, painstaking, laborious, inaccurate, and credulous to a degree rare even for the age in which he lived. Among his principal works are: 1. 'A New Manual of Old Catholic Meditations,' 1617. 2. 'The Judgment of the Apostles,' Douay, 1632, dedicated to Queen Marie, wife of Charles I. These two works are published under the initials 'R. B.' The latter elicited an indignant pamphlet from one 'P. H.,' entitled 'A Detection or Discovery of a Notable Fraud committed by R. B., a Seminarie Priest,' in which Broughton's manner of treating Nos. 23 and 36 of the Thirty-nine Articles is strongly assailed. 3. 'The Ecclesiastical Historie of Great Brittaine,' Douay, 1633. 4. 'A True Memorial of the Ancient, most Holy, and Religious State of Great Britaine,' 1650. In a later edition (1654), the title runs 'Monasticon Britannicum, or a Historical Narration of the first Founding and Flourishing State of the Antiênt Monasteries, Religious Rules, and Orders of Great Brittaine.' 5. 'An Apologetic Epistle in answer to a Book that undertakes to prove that Catholics cannot be good Subjects.' 6. 'A Continuation of the Catholic Apology taken from Christian Authors.'

[Records of the English Catholics under the Penal Laws, chiefly from the Archives of the See of Westminster, 1878; Wood's Fasti (Bliss), i. 428; Wood's History and Antiquities of the University of Oxford; Dodd's Church History; Fuller's Worthies; Pits, De Rebus Anglicis, 1619; Histoire du College de Douay, 1672; Foley's Records, vi. 181.] N. G.

BROUGHTON, SAMUEL DANIEL (1787–1837), army surgeon, was son of the Rev. Thomas Broughton, M.A., who became rector of St. Peter's, Bristol, in 1781. He was born in Bristol in July 1787, and was educated at the grammar school there, under the care of the Rev. S. Seyer, author of 'Memorials of Bristol.' After studying at St. George's Hospital he became assistant-surgeon of the Dorsetshire militia, and in October 1812 was appointed assistant-surgeon of the 2nd life guards, of which Mr. J. Carrick Moore, elder brother of the late General Sir John Moore, was then surgeon. Immediately afterwards Broughton was appointed additional surgeon with temporary rank, and placed in medical charge of the service squadrons of the regiment ordered abroad, with which he was present in the Peninsula and south of France to the end of the war. His campaigning experiences from Lisbon to Boulogne he related in a volume of 'Letters from Portugal, Spain, and France in 1812, 1813, and 1814' (London, 8vo, 1815). He was also with his regiment at the battle of Waterloo. In July 1821 he succeeded to the surgeoncy of the regiment on the resignation of Mr. Moore, who had just been granted a pension of 1,000*l.* a year in recognition of the distinguished services of his late brother. Residing constantly in London with his regiment, Broughton devoted himself with great assiduity to professional and scientific studies. A list of original papers, chiefly relating to physiological research, contributed by him to various scientific journals, will be found in the Royal Society's 'Catalogue of Scientific Papers,' 1800–63, vol. i. In conjunction with Mr. Wilcox, barrister-at-law, he produced and delivered some valuable lectures on forensic medicine and toxicology. He was elected a fellow of the Royal Society and of the Geological Society. In 1836 Broughton received an injury in the leg, caused by a fall, which resulted in disease of the ankle-joint,

and eventually rendered amputation necessary. The operation was performed by the eminent surgeon Liston, but terminated fatally on the tenth day. The circumstances are related in fuller detail in 'Gent. Mag.' N.S. viii. 432. Broughton's death occurred at Regent's Park barracks on 20 Aug. 1837. He was interred at Kensal Green cemetery.

[Gent. Mag. new ser. viii. 432; Rose's New Biog. Dict. vol. v. (many of the details given appear to be incorrect); Army Lists; R. Soc. Cat. Scientific Papers, 1800-63, vol. i.; Brit. Mus. Cat.; Index Brit. Assoc. Reports.] H. M. C.

BROUGHTON, THOMAS (1704–1774), divine, biographer, and miscellaneous writer, born in London on 5 July 1704, was the son of the rector of St. Andrew's, Holborn. He was educated at Eton, and, being superannuated on that foundation, went about 1772 to Cambridge, where 'for the sake of a scholarship he entered himself of Gonville and Caius College.' In 1727, after taking B.A., he was admitted to deacon's orders, and in 1728 he was ordained priest, and proceeded to the M.A. He served for several years as curate of Offley, Hertfordshire, and in 1739 became rector of Stepington, Huntingdonshire; the patron, the Duke of Bedford, also appointing him one of his chaplains. As reader to the Temple, to which he was chosen soon afterwards, he won the favour of the master, Bishop Sherlock, who in 1744 presented him to a prebendal stall in Salisbury Cathedral to which belonged the vicarage of Bedminster, near Bristol, with the chapels of St. Mary Redcliffe, St. Thomas, and Abbot's Leigh annexed. On receiving this important benefice he removed from London to Bristol, where he died on 21 Dec. 1774. He was an industrious writer in many kinds of composition. He published (1742) an 'Historical Dictionary of all Religions from the Creation of the World to the Present Times,' a huge work in two volumes folio; he translated Voltaire's 'Temple of Taste,' and part of Bayle's 'Dictionary;' vindicated orthodox christianity against Tindal; converted a Roman catholic book ('Dorrel on the Epistles and Gospels') to protestant uses; edited Dryden; wrote in defence of the immortality o the soul; and contributed the lives marked 'T' in the original edition of the 'Biographia Britannica.' Hawkins, in his 'Life of Johnson,' credits Broughton with being the real translator of Jarvis's 'Don Quixote.' 'The fact is that Jarvis laboured at it many years, but could make but little progress, for being a painter by profession, he had not been accustomed to write, and had no style. Mr. Tonson, the bookseller, seeing this, suggested the thought of employing Mr. Broughton . . . who sat himself down to study the Spanish language, and in a few months acquired, as was pretended, sufficient knowledge thereof to give to the world a translation of "Don Quixote" in the true spirit of the original, and to which is prefixed the name of Jarvis.' Broughton was a lover of music, and acquainted with Handel, whom he furnished with words for some of his compositions, including the drama of 'Hercules,' first given at the Haymarket in 1745. In private life he was of a mild and amiable disposition, but in controversy, though not discourteous according to the standard of his time, he was very economical in his concessions to his opponents, and he has been characterised in some respects as a weak and credulous writer.

[Biog. Brit. (Kippis), ii. pref. ix–x; Grove's Dict. of Music, i. 730; Hawkins's Life of Dr. Johnson, 1787, p. 216; Lowndes's British Librarian, 1839–42, p. 1250.] J. M. S.

BROUGHTON, THOMAS (1712–1777), divine, the son of Thomas Broughton, who is said to have been at one time commissioner of excise at Edinburgh, was born at Oxford. When he matriculated at University College, Oxford, on 13 Dec. 1731, his father was described as of 'Carfax in Oxford.' He was elected Petreian fellow at Exeter College 30 June 1733, and became full fellow on 14 July 1734, taking his degree of B.A. on 22 March 1737. Soon after becoming an undergraduate he joined the little band of young men who were known as 'Methodists,' and remained a sympathiser with the Wesleys for several years, until differences of opinion on the Moravian doctrines led to their separation. Broughton's first clerical duty was at Cowley, near Uxbridge, and he was curate at the Tower of London in 1736. Through Whitefield's influence he obtained the lectureship at St. Helen's, Bishopsgate Within, but as some of the parishioners objected to Whitefield's preaching from its pulpit he withdrew from the post. He visited the prisoners in Newgate and was indefatigable in doing good. In 1741 he was appointed lecturer at Allhallows, Lombard Street, and two years later was elected secretary to the Society for Promoting Christian Knowledge, a position which he retained until his death. His only other preferment was the living of Wotton in Surrey, which he held from 1752 to 1777. He died at the society's house in Hatton Garden, London, 21 Dec. 1777. He held his fellowship at Exeter College until July 1741. In 1742 he married Miss Capel, by whom he had fifteen children, five of them dying young.

A portrait of Broughton hangs in the board-room of the S. P. C. K. Two very outspoken sermons of his attained great popularity: 'The Christian Soldier, or the Duties of a Religious Life recommended to the Army,' which was preached in 1737, printed in 1738, and reached its twelfth edition in 1818, a Welsh translation having appeared in 1797; and 'A Serious and Affectionate Warning to Servants,' occasioned by the brutal murder of a mistress by her male servant aged only 19, and issued in 1746, ninth edition 1818.

[Tyerman's Oxford Methodists, 334–60; Manning and Bray's Surrey, ii. 158; Boase's Exeter College, 98.] W. P. C.

BROUGHTON, THOMAS DUER (1778–1835), writer on India, was son of the Rev. Thomas Broughton, rector of St. Peter's, Bristol. He was educated at Eton, and went to India in 1795 as a cadet on the Bengal establishment. He was actively engaged at the siege of Seringapatam in 1799, and was afterwards appointed commandant of the cadet corps, and in 1802 military resident with the Mahrattas. For a short time previous to the restoration of Java to the Dutch he held the command of that island. He became a lieutenant on the Madras establishment in 1797, and, passing through the intermediate grades, became colonel in 1829. His death took place in Dorset Square, London, on 16 Nov. 1835. He published: 1. 'Edward and Laura,' a novel, freely translated from the French. 2. 'Letters written in a Mahratta Camp during the year 1809, descriptive of the character, manners, domestic habits, and religious ceremonies of the Mahrattas,' London, 1813, 4to. 3. 'Selections from the Popular Poetry of the Hindoos,' London, 1814, 8vo.

[Gent. Mag. N.S. v. 203; Cat. of Printed Books in Brit. Mus.] T. C.

BROUGHTON, WILLIAM GRANT, D.D. (1788–1853), metropolitan of Australasia, was the eldest son of Grant Broughton, by his wife Phœbe Ann, daughter of John Rumball of Barnet, Hertfordshire. He was born in Bridge Street, Westminster, on 22 May 1788, and educated at Barnet grammar school, but was removed in January 1797 to the King's School, Canterbury, where in the following December he was admitted to a King's scholarship. From 1807 to 1812 he was clerk in the East India House. At last being able to follow the bent of his own inclinations, he became a resident member of Pembroke Hall, Cambridge, in October 1814, was sixth wrangler and B.A. in January 1818, proceeded M.A. in 1823, and B.D. and D.D. *per saltum* in 1836. He was ordained deacon in 1818 and admitted to priest's orders during the same year. The curacy to which he was ordained was that of Hartley Wespall, Hampshire, where he remained from 1818 to 1827. While here he published in 1823 'An Examination of the Hypothesis advanced in a Recent Publication entitled "Palæoromaica," by J. Black, that the text of the Elzevir Greek Testament is not a Translation from the Latin.' This work was dedicated by Broughton to his diocesan, Bishop Tomline, who in 1827 removed him to the curacy of Farnham. The vicinity of his first curacy to Strathfieldsaye led to his introduction to the Duke of Wellington, by whom he was appointed to the chaplaincy of the Tower of London on 6 Oct. 1828.

Subsequently, on 7 Dec. 1828, at the express desire of his grace, he was induced to accept the arduous office of archdeacon of New South Wales. He arrived in Sydney on 13 Sept. 1829. His jurisdiction extended over the whole of Australia, Van Diemen's Land, and the adjoining islands. He visited all the settlements in these latitudes connected with his archdeaconry, and endeavoured to excite the settlers and the government to the erection of churches and schools: but by 1834 he had come to the conclusion that the only way to succeed was to appeal to the mother country for the urgently needed assistance. In answer to his application to the Societies for Promoting Christian Knowledge and for the Propagation of the Gospel in Foreign Parts, and to private individuals, a sum of about 13,000*l.* was placed at his disposal, and the number of clergy was forthwith doubled. Arrangements were also made for establishing a bishopric, and on 14 Feb. 1836 Archdeacon Broughton was consecrated bishop of Australia in the chapel of Lambeth Palace. On his return to Australia on 2 June he found himself involved in controversy respecting the education of the people, and his efforts were to a great extent successful in insuring a church education for the children belonging to the church establishment. It was not long before he visited, for the purposes of confirmation and ordination, New Zealand, Van Diemen's Land, Norfolk Island, and Port Phillip (since known as Victoria), as well as the settlements in New South Wales. Interesting accounts of his missionary tours are to be found in the second and third volumes of 'The Church in the Colonies' published by the Society for Promoting Christian Knowledge. On 16 March 1837 the corner-stone of St. Andrew's Cathedral, Sydney, was laid by Sir Richard Bourke, K.C.B., the governor. The subdivision of the

immense diocese of Australia took place in 1847. At the same time Sydney was made a metropolitical see, and the Bishop of Australia thenceforth bore the title of Bishop of Sydney and Metropolitan of Australasia. On 9 March 1843 the Rev. John Bede Polding arrived in Sydney bearing an appointment from the pope with the title of Archbishop of Sydney. Broughton thought it his duty to make a public and solemn protest against the assumption of this title. Desiring once more to confer with the church at home on the state of the churches in the colonies, he, after a most trying voyage in a fever ship, arrived in England on 20 Nov. 1852. The fatigues and anxieties of that voyage, however, weakened his constitution, and he succumbed to an attack of bronchitis while staying at 11 Chester Street, Belgrave Square, London, the residence of Lady Gipps, the relict of his old friend and schoolfellow and a late governor of New South Wales, on 20 Feb. 1853, and was buried in the south aisle of Canterbury Cathedral on 26 Feb. He had married in the same cathedral, on 13 July 1818, Sarah, eldest daughter of the Rev. John Francis, rector of St. Mildred's, Canterbury; she died at Sydney on 16 Sept. 1849. Broughton was warmly attached to the principles of the English reformation and to the doctrines contained in the liturgy and articles of the church of England. A residence of twenty-five years in the Antipodes had withdrawn him from observation at home; but from time to time came tidings of his noble labours and exemplary fulfilment of the lofty functions of a christian bishop. Some of his publications were: 1. 'A Letter to a Friend touching the question, who was the Author of "Εἰκὼν Βασιλική," ascribing it to J. Gauden, Bishop of Worcester,' 1826. 2. 'Additional Reasons in Confirmation of the Opinion that Dr. Gauden was the Author,' 1829. 3. 'A Letter to H. Osborn on the Propriety and Necessity of Collecting at the Offertory,' 1848. 4. 'A Letter to N. Wiseman by the Bishop of Sydney, together with the Bishop's Protest, 25 March 1843, against the assumptions of the Church of Rome,' 1852. Other works comprised printed charges, sermons, and speeches.

[Sermons by the Right Rev. W. G. Broughton, ed. with a Prefatory Memoir by Benjamin Harrison (1857), pp. ix–xliv; Gent. Mag. xxxix. 431–6 (1853); Heaton's Australian Dictionary of Dates (1879), p. 26, and part ii. p. 56.]

G. C. B.

BROUGHTON, WILLIAM ROBERT (1762–1821), captain in the royal navy, after serving as a midshipman on the coast of North America and in the East Indies, and as lieutenant in the Burford, in the several engagements between Hughes and Suffren, was in 1790 appointed to command the Chatham brig, to accompany Vancouver in his voyage of discovery. He was for some time employed on the survey of the Columbia river and the coasts adjacent. In 1793, he travelled to Vera Cruz, overland from San Blas, on his way to England with despatches. On his arrival in this country he was made commander, 3 Oct., of the Providence, a small vessel of 400 tons burden, and was again sent out to the north-west coast of North America. On arriving on the station he found Vancouver gone; and crossing over to the other side, he commenced, and during the next four years carried out, a close survey of the coast of Asia, from lat. 52° N. to 35° N., in encouragement of which important work he was advanced to post rank on 28 Jan. 1797. On 16 May 1797 the Providence struck on a coral reef near the coast of Formosa, and was totally lost. The men, however, were all saved and taken to Macao in the tender, in which Broughton afterwards continued the survey till May 1798, when he was discharged at Trincomalee for a passage to England, where he arrived in the following February. The history of this voyage and the geographical results he published in 1804, under the title, which is itself a summary of the work of the expedition, 'Voyage of Discovery to the North Pacific Ocean, in which the coast of Asia from the latitude of 35° N. to the latitude of 52° N., the island of Insu (commonly known under the name of the land of Jesso), the north, south, and east coasts of Japan, the Lieuxchieux and the adjacent isles, as well as the coast of Corea, have been examined and surveyed, performed in H.M. sloop Providence and her tender in the years 1795-6-7-8.' The original journals from which this work was elaborated, as well as that of the journey from San Blas to Vera Cruz, are now in the library of the Royal United Service Institution, and contain many interesting personal notices. After holding some other commands Broughton, in 1809, commanded the Illustrious in the expedition under Lord Gambier, and at the court-martial gave evidence which, so far as it went, implied a general agreement with the charges made by Lord Cochrane [see COCHRANE, THOMAS, EARL OF DUNDONALD]. In 1810, still in the Illustrious, he went out to the East Indies, and was present at the reduction of the Mauritius in December [see BERTIE, ALBEMARLE]. In the following spring he had charge of the expedition against Java, which assembled at Malacca and sailed thence on 11 June. The passage was long

and tedious, and Broughton, in the opinion of many, was unduly cautious (*Lord Minto in India: Life and Letters of Gilbert Elliot, first Earl of Minto*, 1807–14, edited by his grandniece, the Countess of Minto, 280). It was the beginning of August before the troops were landed in the neighbourhood of Batavia. On 9 Aug. the squadron was joined by Rear-admiral the Hon. Robert Stopford, who had come on to take the command. Broughton was annoyed, and applied for a court-martial on the rear-admiral 'for behaving in a cruel, oppressive, and fraudulent manner, unbecoming the character of an officer, in depriving me of the command of the squadron.' On the other hand, Lord Minto wrote in his private letters: 'The little commodore's brief hour of authority came to an end, to the great relief of all in the fleet and army' (*ibid.* 282). Possibly this opinion reached the admiralty; at any rate, they did not think fit to grant Broughton's request, and in fact approved of the course taken by Stopford. In 1812 Broughton returned to England. He was made a C.B. at the peace, and during his later years resided at Florence, where he died suddenly on 12 March 1821. He married his cousin Jemima, youngest daughter of Rev. Sir Thomas Delves Broughton, bart., of Doddington Hall, Cheshire, by whom he had three daughters, and one son, William, afterwards a captain in the navy.

BROUN. [See BROWN and BROWNE.]

BROUN, JOHN ALLAN (1817–1879), magnetician and meteorologist, was born on 21 Sept. 1817 at Dumfries, where his father kept a preparatory school for the navy. He entered the university of Edinburgh on his father's death (about 1837). There his turn for physical science attracted the friendship of Professor J. D. Forbes. Through his recommendation he was appointed in April 1842 director of the magnetic observatory founded by Sir Thomas Brisbane at Makerstoun, and, after a short preparatory course of training at Greenwich, entered upon his task with an enthusiasm which quickly widened its scope, and gave to the establishment a high rank among those engaged in simultaneous observations on the plan advocated by Humboldt. Throughout the years 1844–5 observations with all the magnetic and meteorological instruments were made hourly (except on Sundays); and though the term originally fixed for the extended activity of the observatory expired in 1846, a limited series of observations was continued for three years longer under Broun's direction, and after his departure until 1855. The preparation of the results for the press cost him much ungrateful toil in developing and testing new methods of correction, which have been generally adopted, and entitle him to a place among the founders of the new observational science of terrestrial magnetism. The data thus laboriously provided, which were of permanent and standard value, appeared under his editorship as volumes xvii. to xix. of the 'Transactions of the Royal Society of Edinburgh' (1845–50), with an appendix, edited by Professor Balfour Stewart (supplement to vol. xxii. 1860).

Broun left Makerstoun in the autumn of 1849, and spent the winter in Edinburgh engaged in completing the reduction of his observations with the aid of his friend and assistant, Mr. John Welsh, afterwards director of the Kew Observatory. In 1850 he went to Paris, where he married Isaline Vallouy, daughter of a clergyman of Huguenot extraction in the Canton du Vaud, by whom he had three sons and two daughters. In the following year he was nominated, at the instance of Colonel Sykes, director of the Trevandrum Magnetic Observatory, founded by the Rajah of Travancore in 1841, and entered upon his arduous duties there in January 1852. Nor did he limit himself to those officially committed to him, but aimed at promoting the general welfare of the province. He established a museum, issued an amended almanac, attempted a reform of weights and measures, planned and superintended the construction of public gardens, a road to the mountains, and a sanatorium. Renewing in 1855 an experiment partially carried out on the Cheviot hills in the summer of 1847 (*Report Brit. Assoc.* 1847, ii. 19; 1850, ii. 7), he built an observatory on the Agustia Malley, the highest peak of the Travancore Ghats, 6,200 feet above the sea. The difficulties in the way were very great, owing to the wild nature of the country, the presence of wild beasts, the superstitious fears and bodily sufferings of the natives; and Broun himself caught a chill from the sudden transition of temperature, inducing a permanent deafness, for which he vainly sought medical assistance in Europe in 1860. On his return after two years he found the Agustia observatory in ruins, and rebuilt it in 1863 for the purpose of making a final set of observations with new instruments. The results went to show that both magnetic and barometrical oscillations remain unchanged in character at a height of 6,200 feet, but become during the daytime reduced in amount by one half (*Proc. R. Soc.* xi. 298).

In April 1865 Broun left India definitively, and during a residence of some years, first at

Lausanne, then at Stuttgart, devoted his entire energies to preparing for publication the copious materials at his disposal. His sole recreation was an hour's music with his family in the evenings; for he played the violin well, and was an ardent admirer of Beethoven. His insufficient private resources were meantime supplemented by a small pension from the Rajah of Travancore, in whose service he had been a loser in point of interest upon sums advanced for scientific purposes. In 1873 he came to live in London, where in the year following he issued a quarto volume entitled 'Observations of Magnetic Declination made at Trevandrum and Agustia Malley in the Observatories of his Highness the Maharajah of Travancore in the years 1852 to 1869.' It contains an exhaustive and highly valuable discussion of the various modes of solar and lunar action on magnetic declination, of which element alone upwards of 300,000 reduced observations were available from the thirteen years of his administration. The publication, however, went no further, and Broun had the mortification of seeing his life's work left incomplete, and the fruits of his anxious toils lying, for the most part, useless. He had never been a prosperous, and he was henceforth a disappointed man. A devoted adherent of the Free church of Scotland, his scruples about subscription had debarred him from professional employment in his native country, and his deafness hindered his promotion in the branch he had made peculiarly his own. He did not, however, sink into inaction. Aided by a grant from the Royal Society, he undertook to complete the reduction of the magnetic observations made at the various colonial stations. The task was one of vast and undefined extent, and his sense of responsibility for quarterly payments added anxiety to his labour. His health began to give way, and in 1878 he had a nervous attack, from which he never satisfactorily recovered. A trip to Switzerland produced a partial rally, but on 22 Nov. 1879 he died suddenly, at the age of sixty-two.

His character was a peculiarly estimable one. He united amiability and social charm with rigid integrity and a sensitiveness of conscience ill fitted to advance his material interests. His scientific merits did not receive the cordial recognition they deserved. He took a prominent part in ascertaining the laws of terrestrial magnetism. The discovery is entirely due to him that the earth loses or gains magnetic intensity as a whole—in other words, that the changes in the daily mean horizontal force are nearly the same all over the globe. This conclusion, arrived at through a laborious investigation, was first published in a letter to Sir David Brewster, written from Trevandrum on 21 Dec. 1857 (*Phil. Mag.* xvi. 81, August 1858). In the same communication the existence of a magnetic period of twenty-six days, attributed to the sun's rotation, was announced, and the evidence on both points was detailed in a paper read before the Royal Society of Edinburgh on 4 Feb. 1861 (*Trans. R. Soc. Ed.* xxii. pt. iii. 511). Independently of, though subsequently to Kreil, Broun deduced from the Makerstoun observations the fact of a lunar-diurnal influence on the declination-needle (*Report Brit. Assoc.* 1846, ii. 32), a prolonged study of which showed him that it varied in character with the position of the sun (*Proc. R. Soc.* x. 484, xvi. 59), and in amount inversely as the cube of the distance of the moon (*Trans. R. Soc. Ed.* xxvi. 750). He early defined the annual period of magnetic intensity as consisting of a maximum near each solstice, with minima at the equinoxes (*Report Brit. Assoc.* 1845, ii. 15); gave the first complete account of the daily variations of the needle at the magnetic equator (*ib.* 1860, ii. 21), and reached, in the course of these discussions, the remarkable conclusion that great magnetic disturbances proceed from particular solar meridians.

His researches contributed largely to establish meteorology on a scientific basis. He discovered the 26-day period of atmospheric pressure, showed the wide range of simultaneous barometrical fluctuations, initiated the systematic study of variously elevated cloud-strata, and indicated the connection between atmospheric movements and isobaric lines (*Proc. R. Soc.* xxv. 515). But he lacked the power of placing his ideas in a striking light, and the independence of his character did not permit him to purchase applause for himself by flattering the opinions of others. The Royal Society admitted him as a member in 1853, and awarded him a royal medal in 1878. His communications to the Royal Society of Edinburgh were honoured with the Keith prize in 1861.

The Royal Society's 'Catalogue of Scientific Papers' enumerates (vols. i. and vii.) fifty-one of his productions, besides which he contributed to the 'Philosophical Transactions' a paper 'On the Variations of the Daily Mean Horizontal Force of the Earth's Magnetism produced by the Sun's Rotation, and the Moon's Synodical and Tropical Revolutions' (clxvi. 387, 1876); to the 'Transactions of the Royal Society of Edinburgh' an elaborate treatise 'On the Decennial Period in the Range and Disturbance of the Diurnal Oscillations of the Magnetic Needle,

and in the Sunspot Area,' assigning as the length of that period 10·45 years (xxvii. 563, 1876), with a 'Note on the Bifilar Magnetometer' (xxviiii. 41). He wrote frequently in 'Nature.' His 'Reports' on the Makerstoun and Travancore observatories were published respectively at Edinburgh in 1850, and at Trevandrum in 1857. He exhibited at the Loan Exhibition of Scientific Instruments in 1876 a 'gravimeter' of his own invention, described by Major J. Herschel in 'Proceedings of the Royal Society,' xxxii. 507.

[Nature, xxi. 112 (Balfour Stewart); Proc. R. Soc. xxviii. 65, xxx. iii.] A. M. C.

BROUN, SIR RICHARD (1801–1858), miscellaneous writer, was the eldest son of Sir James Broun of Coalston Park, Lochmaben, Dumfriesshire, who resumed the baronetcy in 1826 (BURKE'S *Peerage, Baronetage*, &c., title 'Broun.' Doubts have been thrown on the correctness of parts of this pedigree, see *British American Association and Nova Scotia Baronets*, Edinburgh, 1846, and *Notes and Queries*, various notes under title 'Broun' in 3rd and 5th series). He was born at Lochmaben 22 April 1801, and succeeded to the title on the death of his father 30 Nov. 1844. Before 1834 he was resident in London, and there, till his death at Sphinx Lodge, Chelsea, 10 Dec. 1858, he was busily engaged in the projection of a number of schemes, most of them of a somewhat fantastic nature, and in the compilation of various pamphlets, articles, and letters regarding them. He describes himself in 1856 as 'The Honourable Sir Richard Broun, Knight, and (eighth baronet) of Scotland and Nova Scotia, feudal baron of Colstoun, Haddingtonshire, and chief of his race in North Britain; author of various works on heraldry, agriculture, colonisation, sanitation, &c.' His chief schemes were a plan for a 'line of direct elemental intercourse between Europe and Asia by route of the British North American possessions, and the systematic colonisation of the vacant crown territories over which it will pass' (1833); a plan for an 'Anglo-Canadian Company, which should outrival in the west the East India Company' (*British and American Intercourse*, London, 1852); attempts to revive certain supposed privileges of the baronets, in connection with which he was from 1835 honorary secretary of the Committee of the Baronetage for Privileges, and wrote the following works: 'Dignity, Precedence, &c., of the Honourable the Baronettesses of the Realm' (1839); and 'The Baronetage' for 1841, 1842, 1843, and 1844. He was also engaged in an effort to revive the 'illustrious and sovereign order of Knights Hospitallers of St. John of Jerusalem and of the Venerable Langue of England,' and he held various offices in the reconstituted 'langue' (synoptical sketch of the order, London, 1856). He rendered, however, real service by his projection in 1849 of 'The London Necropolis and National Mausoleum at Woking.' In connection with this scheme and with the general question of extramural interments he wrote 'Extramural Burial,' 1850; 'Extramural Sepulture,' 1850; 'Extramural Sepulture, Synopsis of the London Necropolis,' 1851; 'Extramural Interment and the Metropolitan Sanitary Association,' 1852; 'Metropolitan Interments,' 1852; 'Metropolitan Extramural Interments, Memorial to the Lord Mayor,' &c., 1852; 'Statement as to Progress of Necropolis Undertaking,' 1853; various Letters on the Necropolis Undertaking, 1853–5.

[British American Association; Scots Magazine for 1801, lxiii. 300 (Edinburgh, 1801); Dumfries and Galloway Courier, 21 Dec. 1858 (Dumfries, 1858); Foster's Peerage and Baronetage, p. 682, and the authorities there cited.] F. W–T.

BROUNCKER or **BROUNKER**, WILLIAM, second VISCOUNT BROUNCKER, of Castle Lyons, in the Irish peerage (1620?–1684), first president of the Royal Society, was born about 1620. His father, Sir William Brouncker (born in 1585), was commissary-general of the musters in the expedition against the Scots in 1639; was afterwards one of the privy chamber to Charles I, and vice-chamberlain to Prince Charles; was created doctor of civil law at Oxford on 1 Nov. 1642; was made Viscount Brouncker, of Castle Lyons, in the Irish peerage, 12 Sept. 1645; died at Wadham College, Oxford, in November 1646, and was buried on 20 Nov. in Christ Church Cathedral. Pepys says that he gave 1,200*l.* to be made an Irish lord, and swore the same day that he had not 12*d.* left to pay for his dinner. Brouncker's mother was Winifred, daughter of William Leigh of Newenham, Warwickshire, who died on 20 July 1649, and was buried by her husband. An elaborate monument was afterwards erected above their grave. Brouncker's grandfather was Sir Henry Brouncker, president of Munster, who died on 3 June 1607, and was buried at St. Mary's, Cork, having married Anne, daughter of Parker, lord Morley. The family is traced back to a Henry Brouncker, at one time M.P. for Devizes, and the purchaser of the estate of Melksham, Wiltshire, in 1544. A younger branch changed the family name to Brancker [see BRANCKER, THOMAS]. The original

branch is also known as Bronkard, Brounkard, and Brunkard.

Young Brouncker studied mathematics in his youth at Oxford, and became proficient in many languages. On 23 Feb. 1646-7 he was created doctor of medicine at Oxford. In April 1660 he subscribed the declaration in favour of General Monk. He was M.P. for Westbury in convention parliament of 1660.

Brouncker chiefly employed himself during the Commonwealth in literary work. In 1653 he published, under the pseudonym of 'A Person of Honour,' a translation of Descartes's 'Musical Compendium,' with criticisms of his own (cf. PEPYS's *Diary*, 25 Dec. 1668). He prepared a new division of the 'diapason by sixteen mean proportionals into seventeen equal semitones, the method of which is exhibited by him in an algebraical process, and also in logarithms' (HAWKINS, *History of Music*, iv. 181). Descartes declined to accept this scheme. In 1657 and 1658 Brouncker was corresponding on mathematical topics with Dr. John Wallis, who printed the letters in 1658 in 'Commercium Epistolicum.' Brouncker made two mathematical discoveries of importance. He was the first to introduce continued fractions, and to give a series for the quadrature of a portion of the equilateral hyperbola.

After the Restoration Brouncker took part in the meetings of scientific students in London out of which sprang the Royal Society. The association was incorporated under royal charter, first on 15 July 1662, and again on 15 April 1663. From the date of the society's first incorporation till 30 Nov. 1677, when he resigned, and was succeeded by Sir Joseph Williamson, Brouncker held the office of president, to which he was elected annually. John Evelyn, the diarist, was his intimate friend, and the two often discussed scientific questions with Charles II. In August 1662 Brouncker built a yacht for the king, 'which Mr. Pett,' says Pepys, 'cries up mightily' (*Diary*, 14 Aug. and 3 Sept. 1662). He was president of Gresham College from 1664 to 1667. Brouncker, Boyle, and Sir R. Murray, Evelyn writes, 'were the persons to whom the world stands obliged for the promoting of that generous and real knowledge which gave the ferment that has ever since obtained and surmounted all those many discouragements which it at first encountered' (Evelyn to Mr. Wotton, 30 March 1696, in *Diary*, edited by Bray and Wheatley, iii. 481).

Brouncker was appointed chancellor of Queen Catherine on 18 April 1662, and was commissioner for executing the office of lord high admiral from 12 Nov. 1664. He was a commissioner of the navy for general business (1664-8) and comptroller of the treasurer's accounts (1668-79). Pepys has much to say of him at the admiralty and lived on terms of intimacy with him. In 1681 Brouncker became, after much litigation with Sir Robert Atkyns, master of St. Catherine's Hospital, near the Tower of London. He died at his house, in St. James's Street, Westminster, on 5 April 1684, and was buried in the chapel of St. Catherine's Hospital.

Brouncker was author of 'Experiments of the Recoiling of Forces' (SPRATT, *Royal Society*, 233 et seq.); 'An Algebraical Paper upon the Squaring of the Hyperbola,' and 'On the Proportion of a Curved Line of a Paraboloid to a Straight Line, and of the Finding a Straight Line equal to that of a Cycloid' (*Philosophical Transactions*, iii. 645, viii. 649).

For letters from Brouncker to Archbishop Ussher see Parr's 'Life of Ussher.' Sir Peter Lely painted Brouncker's portrait, which is still in the possession of the Royal Society.

Brouncker was succeeded in the peerage by his brother HENRY, cofferer to Charles II, and gentleman of the bedchamber to the Duke of York, who was created D. Med. at Oxford on 23 June 1646, took part in the siege of Colchester in 1648, was M.P. for Romney from 1655 till he was expelled the house in 1668, was a commissioner of trade and plantations in 1671, and died on 4 Jan. 1687-8. He lived at Sheen Abbey, and was buried at Richmond, Surrey. Evelyn says of him that he 'was ever noted for a hard, covetous, vicious man; but for his worldly craft and skill in gaming few exceeded him.' Pepys's friend, Captain Cocke, described him as 'one of the shrewdest fellows for parts in England, and a dangerous man' (*Diary*, 17 Feb. 1667-8). It is certain that he pandered to all the Duke of York's vices. He presumed so much on his intimacy with the duke that in August 1667 he was dismissed the court, to the delight (according to Pepys) of all honest men. The Comte de Grammont describes him in his 'Mémoires' (chap. xii.) as 'le premier joueur d'échecs du royaume.' He married Rebecca Rodway, widow of Thomas Jermyn, brother to the Earl of St. Albans. With his death the title became extinct.

Royal Society; Hutton's Mathematical Dictionary; Evelyn's Diary; Luttrell's Relation of State Papers, s. v. 'Brunkard.'] S. L.

BROWELL, WILLIAM (1759–1831), captain in the royal navy, son of William Browell, formerly midshipman of the Centurion under Commodore Anson, entered the navy in 1771 on board the Merlin sloop, and, after serving on various ships, was moved shortly before the engagement off Ushant into the Victory. On 10 Nov. 1778 he was made lieutenant, and was with Captain Macbride in the Artois at the hard-fought battle on the Doggerbank, 5 Aug. 1781. In the armament of 1790 he was for a short time in the Canada, and, on that ship being paid off, was appointed to the Alcide, and in the spring of 1793 to the Leviathan. In the Leviathan he was present at the operations against Toulon under Lord Hood. On 25 May 1794 he was officially discharged from the Leviathan on promotion; but as the ship was then with the fleet under Lord Howe, and in daily expectation of a battle, it would appear probable that he continued in her as a volunteer, and was present in the action of 1 June. On 29 Nov. he was posted into the Princess Augusta yacht. In June 1795 Lord Hugh Seymour, now a rear-admiral, hoisted his flag in the Sanspareil, and selected Browell as his flag-captain. He thus had a distinguished share in the battle off Lorient on 23 June 1795, and continued in the Sanspareil during the next two years, including the critical time of the mutiny at Spithead. The squadron under Lord Hugh's immediate command was, however, cruising when the mutiny broke out, and did not come into port until the ships at Spithead had returned to their obedience. In June the Sanspareil was one of a squadron under Sir Roger Curtis, sent for a few weeks into the North Sea. On its return to Spithead, and while the ship was refitting, Captain Browell, being on shore at Gosport, was severely crushed by a bale of wool falling from a height. The injury to his back was such that for some time his life was despaired of; and though, after a long illness, he partially recovered, he was never again fit for active service. In 1805 he was appointed one of the captains of Greenwich Hospital, and in 1809 was advanced to be lieutenant-governor, a position which he held till his death, 22 July 1831.
